Dear California Energy Commission,

I have now totally reduced my carbon footprint to Zero by Using Arcadio Power's free program that sells energy credits for Wind /Solar /etc power to local utility companies and by using SDGE's program to shift 1/2 my energy bill to renewable sources. Finally, I now drive an all-electric vehicle. Thus I strongly Urge the Energy Commission to take drastic measures to eliminate Methane Gas production and utilization. We are only going to get one shot at fixing the pollution of the environment we have created and thus to save this planet.

Dear Commissioner:

California has already pledged to generate all of its electricity through clean renewable energy by 2045. A quarter of California's greenhouse gas emissions are from homes and buildings, the majority of which come from onsite combustion of methane gas for heating. To meet its climate goals, the state must phase out the use of gas in our homes and buildings entirely.

California cannot afford to slow down its pace in transitioning from dirty methane gas to clean electricity in homes and buildings. Clean alternatives, such as solar and wind, are ready and are California's best hope for avoiding more devastating climate impacts.

I strongly encourage the Energy Commission to stay on track with California's climate targets and work towards phasing out gas entirely and rapidly.

Thank you.

Sincerely,

Frank Marwood
