Increased hours of production time from proposal of 2013/2015.

There has been a request to increase the hours of production time from 30 to 100. Application states no more

problems to mitigate with increased production, nitrous increases etc.

Does this mean that horrible whine when machines go into use will increase? We are in the wind pattern here in Leisrue World and we hear high whining noises, rumbliings etc .

Is this going to increase?
