The WebEX link is not working on the California Energy Commission website for the calendared 9 am meeting. Then, I searched for meeting "923 954 711" at energy.webex.com/ec as suggested by the link, for the 9-12 meeting regarding Mechanical Acceptance Test Certification processes. That showed no meeting. I also checked the meeting notice. It has the same WEBEX information.

Last time I tried to listen to a WebEX meeting told by outside people was also run by this same event organizer, many people, so it seemed, could also not hear the meeting, which was taking place. This went on for over a 1/2 hour with people who intended to listen, talking about who was in charge and how they were taking care of the issue.

****IMPORTANT NOTE*****I completely understand how challenging software might be. Perhaps this is on my end. Perhaps it is on the WebEX end. If someone could please help the event organizer with this issue, and/or investigate why the event is on the CEC webpage sponsoring a WEBEX link for the public to listen, it might be appreciated. I have suffered cyber problems out of my control. There is sabotage, unfortunately, amongst the most professional people. Hopefully this is not a cyber issue that the event organizer is unaware of. Thanks for checking!!!!
