Clarification of Objective 3

The webinar on September 30, 2019 noted three research objectives, where the third research objective consisted of "Development of improved methodologies for understanding the underlying dynamics that govern climate-related impacts to the natural gas system." As it is written, the term "underlying dynamics" could refer to physical processes associated with climate system dynamics or societal responses to address climate-related impacts or both. It would be helpful to clarify the scope of this objective, since there are separate approaches to addressing vulnerability and resilience depending on research needs.
