Small Solar and Hydro is Clean Energy

I see no reason why small rooftop solar and large hydro projects should not be considered "clean" energy by the State. Neither produce any carbon into the environment and they would allow keep electricity costs low for customers whose power company added them to their portfolio. Inclusion of roof top solar would also incentivize power companies to encourage rooftop solar of their residential customers. Imagine a completely sustainable community generating all of their power needs locally without the need for huge transmission lines and having to purchase power from other States. Please allow power companies to use these sources of supply in their calculations for "Clean" energy.
