## **Save Renewable Natural Gas for Industry**

For California to be carbon neutral by 2045, all electricity must be 100% carbon free. Also industry and transportation must be carbon free. Because some industrial processes cannot be electrified and must use natural gas fuel, we must reserve all of the limited supply of Renewable Natural Gas (RNG) for industry and not use it for electricity or transportation, which can use electricity and fuel cells powered by renewable hydrogen. Potential RNG supply is less than 3% of the state's current demand for natural gas. Reserving that precious 3% for industry will make carbon neutrality by 2045 much less costly and easier to achieve.
