Comment on agenda item #6 for the 11-13-19 business meeting-I

Additional submitted attachment is included below.

Paul Kangas: Comment for the 11-13-19 business meeting.

I speak for roof top solar & opposition to giant corporate solar farms.

The best way to stop the climate EMERGENCY is to build millions of 4-plex homes each with 100+ solar panels & require PG&E to pay $0.49 kWh to solar homes that sell solar onto the grid.

Replace burned single family homes with 4-plex solar homes, like in Paradice, Ca, to expand the amount of new solar housing.

Pass SB 50.

DECENTRALIZATION of solar energy generation. That will give homeowners control of energy generation. This will lower the cost of housing, since the income from the 100+ panel roofs will generate money to help pay the mortgage.

This will lower mortgages, just like the cost of cell phones keeps dropping, Moore's Law, by using more good solar payment policies, AI & advanced technology.

 Do not build giant corporate solar farms. We solar home owners don't want to pay corporations for solar. Worse, we lose 50% of the energy generated, if it is transmitted over 50 miles on the grid.
