Reconsideration of REACH Code Approvals

Dear California Public Utilities Commission,

As shown by recent wildfires and electrical curtailment by electric utilities in the face of wind and storms; limiting a balanced energy portfolio in our state is non-sensical and risky. Balanced energy is a fundamental requirement as the state (and country) attempt to increase renewables while advancing technologies that take advantage of a balanced approach and use of our varying energy portfolios. I highly encourage leaving all energy options available and viable to our state's populous. Cost effective and thoughtful change is needed, and a rush to REACH standards is an excessive overreach at a time when further study and scientific evaluation of all energy options is needed.

Thank you for your time and consideration.
