## **Pollution by any other name or degree is still pollution**

I helped get signatures for the petition to put this issue on the ballot, talked with many residents, and know that most who have really studied and understood this do not want a "modernized" version of the same ill. The net result would only be as worse, because there will be so many more people affected, and the fact that they will run the plant far more frequently. In the end it could only lead to pollution levels in excess of what we have had over the past decade.

Especially as they can no longer use sea water, why duplicate the problem when there is no benefit or advantage to having such a plant by the beach?

Please exercise the interests and the will of the people and put an end to this ongoing charade.

John Wright
