Against Exposure to Toxic Particulate Mater (Pollution)

I was unable to make the meeting last night (2-10-14). However, My family and I oppose the new power plant because those of us living in very close proximity to this new plant, and its increases in emissions (which include larger amounts of particulate mater) are more at risk than those people not living close, to this proposed fall out. In other words, we are more susceptible to an increased danger of suffering from the adverse health effects associated with particulate mater. For example: asthma, headaches, autism, premature births, lung disease, ADD, cancer, etc. Because we are at greater risk of poor health, we do not want to be exposed to this risk, whether we are rich, middle class, or poor. Because it has not been proven that the proposed power plant is absolutely necessary to be placed in Redondo Beach, we do not want it. Please do not put a new power plant close to such a large population and without enough distance, from people, for its large toxic plume to dissipate.
