BSTD-19-06 CBECC software modifications

BSTD-19-06 CBECC software modifications

What CBECC software modifications are required to implement the adopted local building standards?

How did CEC staff findings confirm that prohibiting propane and natural gas use for residential loads will not cause additional energy use when generating the replacement electricity?

What calculations did CEC staff use in their findings to confirm the adopted local building standards won't result in additional energy use through resource shuffling?

Why haven't CEC staff docketed their findings in more detail, such as listed above?
