## **Electrify now to save complicated and expensive electric conversion later**

Over the past 2 years, we have fully electrified our 1950's home, are quite happy with all the new appliances, and have reduced our monthly utility bill. We especially love the induction stove. It was not cheap, and it took a lot of research and time. We fortuitously heard about the importance of electrification about a year before the end-of-life of our furnace & water heater, happened to be concerned about greenhouse gases, and were fortunate enough to be able to afford the up-front investment. In short, a lot of forces needed to align to successfully electrify one old residence. Please, please, please save future residents, and the government, the hassle and expense of making a similar conversion; require gas-free buildings now.
