## **All-electric Reach Codes**

At the same time that our climate crisis is becoming more and more evident, more studies are coming out highlighting the harmful effects of burning natural (fracked) gas. Homes built to be all-electric are cheaper to construct, safer, and healthier to live in. Since buildings, both residential and commercial, contribute 35-40% of the GHGs leaking into our atmosphere every year, at some point in the future ALL buildings are going to have to be built/retrofitted to eliminate the use of fossil fuels. Why would anyone in his/her right mind commit to something that will become an anachronism in our lifetimes? All electric is the right way to go!
