2020_03_11 California restaurant and hotel equipment upgrade program

Wednesday, March 11, 2020

Can the California Energy Commission create a program similar to the Food Production Investment Program, to address the needs of California restaurant and hotel equipment upgrades? I am thinking that your agency has probably already considered this idea, but I am unsure. I heard in another venue, that many of our restaurant kitchens have loads like small factories. I know many of them use gas and might be interested in converting to electricity, with professional aid.

By the way: I have family in the restaurant and hotel business, whom have not talked to me about this or vice-versa. This question comes from me, not them. I have no idea if they would even consider switching from gas to electricity. I might guess they are not interested. We have never had any discussions about it, yet. (That could change some day, but I have no agenda to press these issues on them.) I have not been involved in their business, or talks of, but have this curiosity probably more so because of their business.

Unfortunately {for me, not you}, COVID-19 peer/news pressure is keeping me from attending your public business meeting today, in person. If there are no technological/cyber issues, I will be watching online hopefully. Have a good one!

Sincerely,

Claire Warshaw
