Please expand hydrogen fueling infrastructure

I am one of thousands of hydrogen fuel cell vehicle drivers in California. We are a community dedicated to making a difference by helping to reduce carbon emissions. We only ask that there be more effort and funding put into the expansion of fueling stations around the state. Currently most of us are limited to one or two stations within in a reasonable distance of about (10 miles or 15 minutes). When supplies are low or equipment malfunctions we may be left stranded or have to drive long distances which is more than inconvenient, it can be stressful wondering if you will even make the distance without running out of fuel, or worried that the supply will be empty or offline when you get there. Please consider prioritizing the approval of more hydrogen fueling stations and expand the production of clean hydron fuel in California.
