Environmental Professional Statement:

We declare that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in § 312.10 part of 40 CFR 312. We have the specific qualifications based on education, training and experience to assess a property of the nature, history and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Gyan Rusconi-Rodrigues, Project Scientist
Report Author, Site Assessor

Destiny Hazra, National Project Manager
Senior Reviewer, Environmental Professional

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Digital Realty Trust, Inc.
2825 and 2845 Lafayette Street
Santa Clara, California

1.2 Findings and Conclusions Summary

ATC has performed this Phase I Environmental Site Assessment (ESA) of the property in conformance with the scope and limitations of ASTM Standard Practice E1527-13. Any exceptions to, or deletions from, this practice are described in Section 2.0 of this report. This assessment has revealed no evidence of *recognized environmental conditions* in connection with the property, except for the following:

| FINDINGS AND CONCLUSIONS SUMMARY | | | | | | |
|----------------------------------|---|----------------------|-----------------|----------------|--------------------------|-------------------------------|
| Report Section | Further Action? | De minimis Condition | REC and/or CREC | Historical REC | ASTM Non-Scope Condition | Description |

| 9.4 | Lead-Based Paint (LBP) | No | | | | |
| 9.5 | Mold Screening | No | | | | |
| 9.6 | Additional User Requested Services | No | | | | |

Note 1) Historical records for 2885 Lafayette Street indicate the asbestos pipe manufacturing facility operated at the property and the south adjacent site (2805 Lafayette Street) from the mid-1950's to 1982. The property and adjacent site were investigated for asbestos and polychlorinated biphenyls (PCB)-related wastes in soil and received closure from the Department of Health Services (DHS), predecessor to the Department of Toxic Substances Control (DTSC), in 1983.

ATC reviewed available data for this facility as obtained from the DTSC Envirostor database (<http://www.envirostor.dtsc.ca.gov>). According to the Envirostor database, "Certainteed Corporation from 1962-1982 manufactured asbestos-cement pipes, products storage, asbestos fiber storage and a settling basin for asbestos slurry. The asbestos fibers were collected using a vacuum system and stored in bags to be removed periodically. The slurry was collected by means of a drainage ditch, which led to a settling basin. The previous owner of the property was Keasby and Mattison, also a manufacturer of asbestos pipe at the property from 1953-1962. Operations entailed the mixing of around 12% asbestos fiber with 60% concrete. Due to recycling of slurry, varying amounts of slurry and concrete were added to 12% asbestos. During the operation of Certainteed, the company gave permission for the storage of components from other companies (their origins unknown). Some of these components included transformers and

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Digital Realty Trust, Inc.
2825 and 2845 Lafayette Street
Santa Clara, California

conductors, both containing PCBs." By late 1983, additional samples were taken by DHS. Asbestos levels were less than 1%, the cleanup goal set by the DHS.

In 2003, the DTSC recommended no further action be taken considering cleanup was completed in 1983 and samples collected by the DHS were cleaned to their specification. Based on the information reviewed and conclusions of both the EPA investigation in 1991 and the No Further Action issued by the DTSC in 2003, the various regulatory listings for the property are a *historical recognized environmental condition* for the property.

Note 2) The site at 800 Central Expressway is listed on the SLIC database for a release of trichloroethylene (TCE) that impacted groundwater. The site address was adjacent to the south, but the investigation included the property (2825 and 2845 Lafayette Street) (refer to the Appendix B Site Plan regarding the groundwater monitoring wells). Based on a review of the subsurface sampling reports prepared by Emcon Associates (Emcon) on Geotracker, dated February and March 1987, five groundwater monitoring wells were installed at the site in 1987 for subsurface investigation purposes. Soil samples that were collected in March 1987, to investigate the chemical concentrations noted in February 1987, included two soil samples that were collected from between 2.5 and three feet below the ground surface (bgs) at each of the two soil boring locations. The laboratory analysis of the soil samples (designated as SM04 and SM05) "showed no detectable levels of VOCs [volatile organic compounds]." Emcon Associates determined that "because VOCs were not detected in the shallow soils adjacent to wells M-4 and M-5 it is unlikely that the VOCs detected in the ground water were caused by past site activities." Therefore, "it is probable that the VOCs detected in the ground water in Wells M-4 and M-5 are due to migration from an up-gradient (i.e. southern), off-site source."

A closure letter for the SLIC case was not available to ATC. However, ATC reviewed the "Report of Environmental Site Assessment", dated April 3, 2007, as prepared by Pond, Robinson & Associates LP (PR&A). The PR&A report identified a closure letter, dated February 3, 2005, for the Regional Water Quality Control Board (RWQCB) SLIC case. This letter summarized that five groundwater monitoring wells were installed at the property which included 2805, 2825, and 2845 Lafayette Street in 1987 "as part of a development-related site investigation." Groundwater samples collected from M-4 in March 1987 contained maximum concentrations of 110 ug/L TCE, 2 ug/L 1,1,1-trichloroethane (1,1,1-TCA), and 9 ug/L trans-1,2-dichloroethene (t-1,2-DCE). In addition, groundwater samples collected from M-5 in March 1987 contained maximum concentrations of 78 ug/L TCE and 190 ug/L t-1,2-DCE. MW-4 is located at the property boundary, down gradient from the Monsanto contaminant plume." According to the RWQCB, "while contamination still exists in MW-4, this likely represents the down gradient of the Monsanto plume" and "an access agreement to allow Monsanto to take over monitoring of MW-4 has been negotiated." Groundwater monitoring well MW-5 "is located in the interior of the site, and "while the contamination discovered in this well in 1987 may not have been related to the Monsanto plume, subsequent monitoring of this well in 1997 showed TCE concentrations below the detection limit (5 ug/L)." The RWQCB concluded that "no further action related to the pollutant releases at the subject site is required." The RWQCB stated that groundwater monitoring well MW-1 had been destroyed and MW-3 "could not be located in 2004 or 2005." Monitoring wells MW-2 and MW-5 were requested to be destroyed in accordance with the Santa Clara Valley Water District guidelines.

Based on the 2005 closure letter issued by the RWQCB, the SLIC listing represents a *historical recognized environmental condition* to the property.

Note 3) ATC further reviewed data for the up-gradient Monsanto Chemical Company previously located at 2710 Lafayette Street, approximately 1,000 feet southwest and up-gradient of 2825 and 2845 Lafayette Street. This facility was listed on the SLIC database as an open case under remediation. The release at 2710 Lafayette Street involved a release of solvents, including TCE, which impacted groundwater. Monsanto discharged liquid wastes on a portion of 2710 Lafayette Street from the mid-1960s to 1975, and buried solid waste in seven trenches elsewhere on the property. VOCs, fuel hydrocarbons, and other chemicals/wastes, including PCBs, have been found at 2710 Lafayette Street. According to the EDR

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Digital Realty Trust, Inc.
2825 and 2845 Lafayette Street
Santa Clara, California

database report, "the present level of contamination at the site poses a significant threat to public and environmental health" and it was noted that both soil and groundwater were contaminated. Groundwater was contaminated with solvents, including TCE. Because 2710 Lafayette Street is located up-gradient of 2825 and 2845 Lafayette Street, the RWQCB concluded that contamination recorded at 2825 and 2845 Lafayette Street, in 1987 originated from the 2710 Lafayette Street site, therefore this release represents a *historical recognized environmental condition* for the property.

Note 4) ATC observed hydraulic oil staining on the floor near the hydraulic elevator room at 2825 Lafayette Street. The stain was approximately 10 square feet in area and did not extend to any floor drains. ATC considers the staining to be a *de minimus condition*.

1.3 Significant Data Gap Summary

Data gaps may have been encountered during the performance of this Phase I ESA and are discussed within the section of the report where they were encountered. However, according to ASTM Standard Practice E1527-13, data gaps are only significant if "other information and/or professional experience raise reasonable concerns involving the data gap." The following is a summary of *significant data gaps* identified in this report.

| SIGNIFICANT DATA GAP SUMMARY | | |
|------------------------------|---|--|
| Report Section | Description | |
| 3.5 | Current Uses of Adjoining Properties | No <i>significant data gap</i> identified. |
| 4.2 | Environmental Liens or Activity and Use Limitations (AULs) | No <i>significant data gap</i> identified. |
| 5.1 | Standard Environmental Records | No <i>significant data gap</i> identified. |
| 5.2 | Physical Setting Sources | No <i>significant data gap</i> identified. |
| 5.3 | Historical Records Sources | No <i>significant data gap</i> identified. |
| 6.1 | Methodology and Limiting Conditions | No <i>significant data gap</i> identified. |
| 7.0 | Interviews | No <i>significant data gap</i> identified. |

1.4 Recommendations

Based on information collected from the Phase I ESA, ATC offers no recommendations for further action at this time.

2.0 INTRODUCTION

2.1 Purpose

The purpose of this Phase I ESA was to identify recognized environmental conditions in connection with the property at the time of the site reconnaissance. The scope of work for this Phase I ESA may also include certain potential environmental conditions beyond the scope of ASTM Standard Practice E1527-13 as listed below. This report documents the findings, opinions and conclusions of the Phase I ESA.

2.2 Scope

This Phase I ESA was conducted in general accordance with the ASTM Standard Practice E1527-13, consistent with a level of care and skill ordinarily practiced by the environmental consulting profession currently providing similar services under similar circumstances. Significant additions, deletions or exceptions to ASTM Standard Practice E1527-13 are noted below or in the corresponding sections of this report. The scope of this assessment included an evaluation of the following:

- Physical setting characteristics of the property through a review of referenced sources such as topographic maps and geologic, soils and hydrologic reports.
- Usage of the property, adjoining properties and surrounding area through a review of referenced historical sources such as land title records, fire insurance maps, city directories, aerial photographs, prior reports and interviews.
- Observations and interviews regarding current property usage and conditions including: the use, treatment, storage, disposal or generation of hazardous substances, petroleum products, hazardous wastes, nonhazardous solid wastes and wastewater.
- Usage of adjoining and surrounding area properties and the likely impact of known or suspected releases of hazardous substances or petroleum products from those properties in, on or at the property.
- Information in referenced environmental agency databases and local environmental records, within the specified approximate minimum search distance from the property.
- Potential for subsurface vapor migration in, on or at the property as described in Section 7.0.

The scope of the assessment also included consideration of the following potential environmental issues or conditions that are beyond the scope of ASTM Standard Practice E1527-13:

- The scope of work for the Mold Screening was intended to be consistent with ASTM E 2418-06: Standard Guide for Readily Observable Mold and Conditions Conducive to Mold in Commercial Buildings: Baseline Survey Process. The scope of work, including potential deviations from the Standard Guide, is described as follows. The interview was limited to at least one knowledgeable person from property management or engineering staff. The document review was limited to only those relevant documents made readily available to ATC in a timely manner. The physical observations were limited to certain Heating, Ventilation and Air Conditioning (HVAC) system areas and other readily accessible building areas likely to become subject to water damage, plumbing leaks, and flooding. Unless noted otherwise herein, ATC observed the HVAC equipment room(s) and accessible mechanical rooms and, in buildings with package units in the ceiling, at least one unit per floor. Also, unless noted otherwise, ATC observed accessible areas of the basement (or lowest level), the top floor, the roof (including any penthouse areas) and at least one mid-level floor

(if applicable). For multi-story buildings, the total number of floors observed (inclusive of those already mentioned) was intended to be up to 10% of the total number of floors (if readily accessible). For hotel and multi-family buildings, ATC targeted the lowest and highest levels and roof as described above and up to 10% of units, including one per floor if readily accessible. The Mold Screening did not include destructive methods of observation. No sampling or laboratory analyses were conducted. The Mold Screening service as described herein was limited in scope and by the time and cost considerations typically associated with performing a Phase I ESA. No method can guarantee that a hazard will be discovered if evidence of the hazard is not encountered within the performance of the Mold Screening as authorized and that opinions and conclusions must, out of necessity, be extrapolated from limited information and discrete, non-continuous data points. Unidentified mold or other microbial conditions may exist on the property.

- Visual observation of suspect asbestos-containing materials (ACM), consisting of providing an opinion on the condition of suspect ACM on the property based upon visual observation during the site reconnaissance. No sampling of suspect ACM was conducted.
- Radon document review, consisting of the review of published radon data with regard to the potential for elevated levels of radon gas in the surrounding area of the property. No radon sampling was conducted.
- Lead in Drinking Water Data review, consisting of contacting the water supplier for information regarding whether or not the potable water provided to the property meets the drinking water standards for lead.
- Visual observation of Lead-based paint (LBP), consisting of providing an opinion on the potential for suspect LBP based on the construction date of buildings on the property and visual observation of the condition of suspect LBP.
- Wetlands document review, consisting of a review of a current National Wetlands Inventory map of the surrounding area to note if the property is identified as having a wetland.
- Flood plain document review, consisting of a review of a reasonably ascertainable flood plain map of the surrounding area to note if the property is identified as being located within a flood plain.
- Regulatory Agency File and Records Review, consisting of conducting a file review (i.e., via Freedom of Information Act (FOIA) request or alternative method/source) for the property and/or one adjoining property at one regulatory agency, as warranted by the findings of the ESA.

2.3 Significant Assumption

The assumptions in this report were not considered as having significant impact on the determination of *recognized environmental conditions* associated with the property.

2.4 Limitations and Exceptions

ATC has prepared this Phase I ESA report using reasonable efforts to identify *recognized environmental conditions* associated with hazardous substances or petroleum products in, on or at the property. Findings contained within this report are based on information collected from observations made on the day(s) of the site reconnaissance and from reasonably ascertainable information obtained from certain public agencies and other referenced sources.

The ASTM Standard Practice E1527-13 recognizes inherent limitations for Phase I ESAs, including, but not limited to:

- *Uncertainty Not Eliminated* – A Phase I ESA cannot completely eliminate uncertainty regarding the potential for *recognized environmental conditions* in connection with any property.
- *Not Exhaustive* – A Phase I ESA is not an exhaustive investigation of the property and environmental conditions on such property.
- *Past Uses of the Property* – Phase I requirements only require review of standard historical sources at five year intervals. Therefore, past uses of property at less than five year intervals may not be discovered.

Users of this report may refer to ASTM Standard Practice E1527-13 for further information regarding these and other limitations. This report is not definitive and should not be assumed to be a complete and/or specific definition of all conditions above or below grade. Current subsurface conditions may differ from the conditions determined by surface observations, interviews and reviews of historical sources. The most reliable method of evaluating subsurface conditions is through intrusive techniques, which are beyond the scope of this report. Information in this report is not intended to be used as a construction document and should not be used for demolition, renovation, or other property construction purposes. Any use of this report by any party, beyond the scope and intent of the original parties, shall be at the sole risk and expense of such user.

ATC makes no representation or warranty that the past or current operations at the property are, or have been, in compliance with all applicable federal, state and local laws, regulations and codes. This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated. Regardless of the findings stated in this report, ATC is not responsible for consequences or conditions arising from facts not fully disclosed to ATC during the assessment.

An independent data research company provided the government agency database referenced in this report. Information on surrounding area properties was requested for approximate minimum search distances and is assumed to be correct and complete unless obviously contradicted by ATC's observations or other credible referenced sources reviewed during the assessment. ATC shall not be liable for any such database firm's failure to make relevant files or documents properly available, to properly index files, or otherwise to fail to maintain or produce accurate or complete records.

ATC makes no warranty, guarantee or certification regarding the quality, accuracy or reliability of any prior report provided to ATC and discussed in this Phase I ESA report. ATC expressly disclaims any and all liability for any errors or omissions contained in any prior reports provided to ATC and discussed in this Phase I ESA report.

ATC used reasonable efforts to identify evidence of aboveground and underground storage tanks and ancillary equipment on the property during the assessment. "Reasonable efforts" were limited to observation of accessible areas, review of referenced public records and interviews. These reasonable efforts may not identify subsurface equipment or evidence hidden from view by things including, but not limited to, snow cover, paving, construction activities, stored materials and landscaping.

Any estimates of costs or quantities in this report are approximations for commercial real estate transaction due diligence purposes and are based on the findings, opinions and conclusions of this assessment, which are limited by the scope of the assessment, schedule demands, cost constraints, accessibility limitations and other factors associated with performing the Phase I ESA. Subsequent determinations of costs or quantities may vary from the estimates in this report. The estimated costs or quantities in this report are not intended to be used for financial disclosure related to the Financial Accounting Standards Board (FASB)

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Digital Realty Trust, Inc.
2825 and 2845 Lafayette Street
Santa Clara, California

Statement No. 143, FASB Interpretation No. 47, Sarbanes/Oxley Act or any United States Securities and Exchange Commission reporting obligations, and may not be used for such purposes in any form without the express written permission of ATC.

ATC is not a professional title insurance or land surveyor firm and makes no guarantee, express or implied, that any land title records acquired or reviewed in this report, or any physical descriptions or depictions of the property in this report, represent a comprehensive definition or precise delineation of property ownership or boundaries.

The Environmental Professional Statement in Section 1.1 of this report does not “certify” the findings contained in this report and is not a legal opinion of such *Environmental Professional*. The statement is intended to document ATC’s opinion that an individual meeting the qualifications of an Environmental Professional was involved in the performance of the assessment and that the activities performed by, or under the supervision of, the *Environmental Professional* were performed in conformance with the standards and practices set forth in 40 CFR Part 312 per the methodology in ASTM Standard Practice E1527-13 and the scope of work for this assessment.

Per ASTM Standard Practice E1527-13, Section 6, User Responsibilities, the User of this assessment has specific obligations for performing tasks during this assessment that will help identify the possibility of *recognized environmental conditions* in connection with the property. Failure by the User to fully comply with the requirements may impact their ability to use this report to help qualify for *Landowner Liability Protections* (LLPs) under Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). ATC makes no representations or warranties regarding a User’s qualification for protection under any federal, state or local laws, rules or regulations.

In accordance with the ASTM Standard Practice E1527-13, this report is presumed to be valid for a six month period. If the report is older than six months, the following information must be updated in order for the report to be valid: (1) regulatory review, (2) site visit, (3) interviews, (4) specialized knowledge and (5) environmental liens search. Reports older than one year may not meet the ASTM Standard Practice E1527-13 and therefore, the entire report must be updated to reflect current conditions and property-specific information.

Other limitations and exceptions that are specific to the scope of this report may be found in corresponding sections.

2.5 Special Terms and Conditions (User Reliance)

This report is for the use and benefit of, and may be relied upon by, Digital Realty Trust, Inc. and any of its affiliates and their respective successors and assigns, in connection with a commercial real estate transaction involving the property. No third party is authorized to use this report for any purpose. Any use by or distribution of this report to third parties, without the express written consent of ATC, is at the sole risk and expense of such third party.

3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The property address is 2825 and 2845 Lafayette Street (formerly 700 and 750 Central Expressway respectively), Santa Clara, California 95050. The Site Vicinity Map is located in Appendix A. The Site Plan is located in Appendix B. Site Photographs are provided in Appendix C. According to information obtained from the Santa Clara County Assessor, the property is zoned ML, light industrial. The property is referenced as assessor's parcel number (APN) 224-04-093.

3.2 Surrounding Area General Characteristics

The property is located in Santa Clara County in an area characterized by industrial and commercial uses. Surface topography across the property and in the surrounding area is relatively flat with a slope towards the north/northeast. Specific adjacent and abutting properties are summarized in Section 3.5.

3.3 Current Use of the Property

The property consists of two, two-story buildings (2825 and 2845 Lafayette Street). Each building is approximately 158,000 square feet in size and was constructed between 1983 and 1984. Both buildings are occupied by Hitachi Vantara. The eastern building (2825 Lafayette Street) generally consists of office space on both floors, common areas, a cafeteria, and maintenance rooms. The western building (2845 Lafayette Street) houses data servers and a gym on the first floor, and office space on the second floor. Major operations conducted at the facility consist of software development and administrative support services. Chemical use with these operations is discussed in Section 6.2. Equipment enclosures, asphalt parking areas, concrete walkways, and landscaping generally encompass the remainder of the property footprint.

3.4 Description of Property Improvements

The following table provides general descriptions of the property improvements.

| PROPERTY IMPROVEMENTS | |
|---|--|
| Size of Property (approximate) | Approximately 13.7 acres |
| General Topography of Property | Generally flat with a slight slope to the north/northeast |
| Adjoining and/or Access/Egress Roads | Lafayette Street to the west |
| Paved or Concrete Areas (including parking) | Asphalt and concrete paved parking areas and concrete paved sidewalks. |
| Unimproved Areas | None |
| Landscaped Areas | Landscaped building perimeters, road frontages, and parking areas. |
| Surface Water | None |
| Potable Water Source | Santa Clara Valley Water District |
| Sanitary Sewer Utility | City of Santa Clara |
| Storm Sewer Utility | City of Santa Clara |
| Electrical Utility | Silicon Valley Power (SPV) |
| Natural Gas Utility | Pacific Gas and Electric (PG&E) |
| Current Occupancy Status | 100% |
| Unoccupied Buildings/Spaces/Structures | None |
| Number of Occupied Buildings | Two |

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Digital Realty Trust, Inc.
2825 and 2845 Lafayette Street
Santa Clara, California

| | |
|---|--|
| Building Name or General Building Description | 2825 Lafayette Street |
| Number of Floors | Two |
| Total Square Feet of Space (approximate) | Approximately 158,000 |
| Construction Completion Date (year) | 1983/1984 |
| Construction Type | Concrete tilt-up structure with steel framing, supported by a concrete foundation. |
| Interior Finishes Description | Interior finishes include carpet, concrete, wallboard (and associated joint compound), ceramic tiles, vinyl floor tiles, vinyl sheet flooring, and acoustical ceiling tiles. |
| Exterior Finishes Description | Exterior finishes generally include painted concrete walls. |
| Cooling System Type | Roof-mounted heating, ventilating, and air conditioning (HVAC) units, powered by electricity; ground level and roof-mounted HVAC equipment at 800 Central Expressway, powered by electricity |
| Heating System Type | Roof-mounted HVAC units, powered by electricity |
| Emergency Power | One diesel-powered emergency generator between 2805 and 2825 Lafayette Street with a 650-gallon aboveground day diesel storage tank that is shared between the two buildings. |

4.0 USER PROVIDED INFORMATION

The following section summarizes information (if any) provided by Digital Realty Trust, Inc. (User) with regard to the Phase I ESA. Documentation may be found in Appendix D or where referenced in this report.

4.1 Title Records

The User provided no title records information.

4.2 Environmental Liens or Activity and Use Limitations (AULs)

The User provided no information regarding property environmental liens or activity and use limitations (AULs). ATC contracted Environmental Data Resources, Inc. (EDR) to provide the environmental lien search report. There were no environmental liens or other AULs identified in connection with the property. The title to the property is vested in Central Income Parts Holding Co LLC, which obtained title from the BH Digital 700-750 LLC as of a deed recorded May 18, 2012. A copy of the environmental lien search report is included in Appendix L.

4.3 Specialized Knowledge or Experience of the User

The User provided no specialized knowledge regarding *recognized environmental conditions* associated with the property.

4.4 Significant Valuation Reduction for Environmental Issues

The User provided no information regarding a significant valuation reduction for environmental issues associated with the property.

4.5 Owner, Property Manager and Occupant Information

The User identified the property tenant as Hitachi Vantara and Ms. Lyn Barshay with Menlo Equities, as the primary contact for access to the property.

4.6 Reason for Performing Phase I ESA

The User indicated that the Phase I ESA is requested in connection with a potential acquisition of the subject facilities.

4.7 Other User Provided Documents

Per the ASTM Standard Practice E 1527-13, ATC obtained the documents listed below from the User. Further discussion may be found in Section 5.3.9 and other relevant sections of this report.

| Title | Date (if known) | Author and/or Source (If known) |
|---|-----------------|---------------------------------|
| Report of Environmental Site Assessment | April 3, 2007 | Pond, Robinson & Associates, LP |
| Phase I Environmental Site Assessment | March 2017 | Ramboll Environ US Corporation |

5.0 RECORDS REVIEW

5.1 Standard Environmental Records

The regulatory agency database report discussed in this section, provided by EDR of Shelton, Connecticut, was reviewed for information regarding reported use or release of hazardous substances and petroleum products on or near the property. Unless otherwise noted, the information provided by the regulatory agency database report and other sources referenced in this report, were considered sufficient for *recognized environmental condition (REC)*, *controlled recognized environmental condition (CREC)*, *historical recognized environmental condition (HREC)* or *de minimis condition* determinations without conducting supplemental agency file reviews. ATC also reviewed the "unmappable" (also referred to as "orphan") listings within the database report, cross-referencing available address information and facility names. Unmappable sites are listings that could not be plotted with confidence, but are potentially in the general area of the property, based on the partial street address, city, or zip code. Any unmappable site that was identified by ATC as being within the approximate minimum search distance from the property, based on the site reconnaissance and/or cross-referencing to mapped listings, is included in the discussion within this section. The complete regulatory agency database report may be found in Appendix E.

The following is a summary of the findings of the database review.

| SUMMARY OF FEDERAL, STATE AND TRIBAL DATABASE FINDINGS | | | |
|---|---------------------------------|------------------|----------------|
| Regulatory Database | Approx. Minimum Search Distance | Property Listed? | # Sites Listed |
| Federal National Priority List (NPL) | 1 mile | No | 0 |
| Federal Delisted NPL | ½ mile | No | 0 |
| Federal Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) list | ½ mile | No | 0 |
| Federal CERCLIS No Further Remedial Action Planned (NFRAP) | ½ mile | Yes | 10 |
| Federal Resource Conservation and Recovery Act (RCRA), Corrective Action facilities (CORRACTS) | 1 mile | Yes | 8 |
| Federal RCRIS non- CORRACTS Treatment, Storage, and Disposal Facilities (TSD) | ½ mile | No | 1 |
| Federal RCRA Generators | Property & Adjoining | Yes | 30 |
| Federal Institutional Control/Engineering Control Registry | Property | No | 0 |
| Federal Emergency Response Notification System (ERNS) list | Property | No | 0 |
| State and Tribal NPL | 1 mile | No | 2 |
| State and Tribal CERCLIS | ½ mile | No | 73 |
| State and Tribal Landfill or Solid Waste Disposal Sites | ½ mile | No | 2 |
| State and Tribal Leaking Underground Storage Tanks (LUST) | ½ mile | No | 49 |
| State and Tribal Registered Underground Storage Tanks (UST) | Property & Adjoining | No | 23 |
| State and Tribal Institutional Control/Engineering Control Registry | Property | No | 0 |
| State and Tribal Voluntary Cleanup Site | ½ mile | No | 0 |
| State and Tribal Brownfield Sites | ½ mile | No | 2 |

5.1.1 Federal Agency Database Findings

The property was identified on the following federal agency databases searched. State database listings, corresponding to these federal database listings, are also discussed below.

Certainteed, Santa Clara

2885 Lafayette Street

Databases: CA RESPONSE, CA ENVIROSTOR, CA HIST Cal-Sites, CA HWP, SEMS-ARCHIVE, CORRACTS, RCRA NonGen / NLR

Approximate Distance from the Property: N/A (Property)

Assumed Groundwater Gradient: N/A (Property)

Regulatory Data Summary: The Superfund Enterprise Management System Archive (SEMS Archive) listing indicates that the facility is not listed on the National Priorities List (NPL). The facility is listed on the Resource Conservation and Recovery Act Non-Generator (RCRA-NonGen) database as a site that does not currently generate hazardous waste. The Corrective Action facilities (CORRACTS) listing regulates hazardous waste under RCRA. The historical records indicate that the asbestos pipe manufacturing facility associated with the California Envirostor (CA ENVIROSTOR), California historical Cal-Sites (CA HIST Cal-Sites) and California Hazardous Waste Program (CA HWP) listings, operated at the property(2825 and 2845 Lafayette Street) and south adjacent site (2805 Lafayette Street) from the mid-1950's to 1982. The property was investigated for asbestos and polychlorinated biphenyls (PCB)-related wastes in soil and received closure from the Department of Health Services (DHS), predecessor to the Department of Toxic Substances Control (DTSC) in 1983. The property is listed with "closed" or "certified" status according to the California Response (CA RESPONSE) and CA HWP listings.

In addition, ATC reviewed available data for this facility as obtained from the DTSC Envirostor database (<http://www.envirostor.dtsc.ca.gov>). According to the Envirostor database, "Certainteed Corporation from 1962-1982 manufactured asbestos-cement pipes, products storage, asbestos fiber storage and a settling basin for asbestos slurry. The asbestos fibers were collected using a vacuum system and stored in bags to be removed periodically. The slurry was collected by means of a drainage ditch which led to a settling basin. The previous owner of the property was Keasby and Mattison, also a manufacturer of asbestos pipe at the property from 1953-1962. Operations entailed the mixing of around 12% asbestos fiber with 60% concrete. Due to recycling of slurry, varying amounts of slurry and concrete were added to 12% asbestos. During the operation of Certainteed, the company gave permission for the storage of components from other companies (their origins unknown). Some of these components included transformers and conductors, both containing PCBs."

According to the DTSC "Site Screening Form" dated July 31, 2003, the property was owned by Keasby and Mattison, a manufacturer of asbestos pipe, from 1953-1962, when Certainteed gained title of the property. Records of waste disposal for the original landowners, Keasby and Mattison, were not found. The property was used from 1962-1982 by Certainteed for the "manufacture of asbestos-cement pipes, products storage, asbestos fiber storage and a settling basin for asbestos slurry. The asbestos fibers were collected using a vacuum system and stored in bags to be removed periodically. The slurry was collected by means of a drainage ditch which led to a settling basin."

According to the DTSC, in November 1981, "the DHS collected information after a routine ISD inspection indicated that the plant was to be closed and demolished. Samples taken by DHS in August 1982 contained asbestos, with levels as high as 6% (plus or minus 4%). Cleanup of the site was required by DHS. The responsibility for site cleanup was placed upon Certainteed, but by late 1982, Sobrato Development Companies bought the property with the intent to develop. Sobrato Development Companies conducted the cleanup, which needed to be completed before demolition

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Digital Realty Trust, Inc.
2825 and 2845 Lafayette Street
Santa Clara, California

and construction could begin. Cleanup activities began in early 1983 with the removal of any asbestos fibers in the buildings and on the surface of the property, along with the removal of soil below the settling basin and drying area down to 5 feet. Also, all transformers and conductors containing PCBs were removed. By late 1983, additional samples were taken by DHS. Asbestos levels were less than 1%, the cleanup goal set by DHS, and the transformers and conductors containing PCBs were removed.”

In 2003, the DTSC recommended no further action be taken considering cleanup was completed in 1983 and samples collected by the DHS were cleaned to their specifications

Discussion: Based on the information reviewed and conclusions of both the EPA investigation in 1991 and the NFA letter issued by the DTSC in 2003, these state and federal regulatory listings for the property are considered to be a *historical recognized environmental condition* for the property.

Applied Materials

800 Central Expressway

Databases: CA SLIC, CA EMI, RCRA NonGen / NLR, FINDS, ECHO

Approximate Distance from the Property: Address is adjacent to the south, but investigation area includes the property

Assumed Groundwater Gradient: Address is adjacent to the south, but investigation area includes the property

Regulatory Data Summary: The RCRA NonGen / NLR listing indicates the site does not presently generate hazardous waste. The EMI listing is for emissions permits between 2001 and 2003. The Federal Index System (FINDS) and Enforcement Compliance History Online (ECHO) databases indicate that the site is listed on the RCRA database.

The facility was listed on the SLIC database for a release of TCE that impacted groundwater. Based on a review of the subsurface sampling reports on Geotracker, dated February and March 1987, five groundwater monitoring wells were installed at the property in 1987 for subsurface investigation purposes. Soil samples that were collected in March 1987, to investigate the chemical concentrations noted in February 1987, included two soil samples that were collected from between 2.5 and three feet below ground surface (bgs) at each of the two soil boring locations. The laboratory analysis of the soil samples (designated as SM04 and SM05) “showed no detectable levels of VOCs [volatile organic compounds].” Emcon Associates determined that “because VOCs were not detected in the shallow soils adjacent to wells M-4 and M-5 it is unlikely that the VOCs detected in the ground water were caused by past site activities.” Therefore, “it is probable that the VOCs detected in the ground water in Wells M-4 and M-5 are due to migration from an up-gradient (i.e. southern), off-site source.” Refer to the Appendix B Site Plan regarding locations of the five wells.

A closure letter for the SLIC case was not available to ATC. However, ATC reviewed the “Report of Environmental Site Assessment”, dated April 3, 2007, as prepared by Pond, Robinson & Associates LP (PR&A). The PR&A report identified a closure letter, dated February 3, 2005, for the RWQCB SLIC case. This letter summarized that five groundwater monitoring wells were installed at the property in 1987 “as part of a development-related site investigation.” Two of the groundwater monitoring wells “showed low levels of TCE, MW-4 at 110 micrograms per liter (ug/L) and MW-5 at 78 ug/L. MW-4 is located at the property boundary, down gradient from the Monsanto (2710 Lafayette Street) contaminant plume.” According to the RWQCB, “while contamination still exists in MW-4, this likely represents the down gradient of the Monsanto plume” and “an access agreement to allow Monsanto to take over monitoring of MW-4 has been negotiated.” Groundwater monitoring well MW-5 “is located in the interior of the site” and “while the contamination discovered in this well in 1987 may not have been related to the Monsanto plume, subsequent monitoring of this well in 1997 showed TCE concentrations below the detection limit (5 ug/L).” The RWQCB

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Digital Realty Trust, Inc.
2825 and 2845 Lafayette Street
Santa Clara, California

concluded that “no further action related to the pollutant releases at the subject site is required.” The RWQCB stated that groundwater monitoring well MW-1 had been destroyed and MW-3 “could not be located in 2004 or 2005.” Monitoring wells MW-2 and MW-5 were requested to be destroyed in accordance with the Santa Clara Valley Water District guidelines.

Discussion: Based on the 2005 closure letter issued by the RWQCB, the SLIC listing represents a *historical recognized environmental condition* to the property.

National Semiconductor Corp
700 Central Expressway

Databases: RCRA SQG, FINDS, ECHO

Approximate Distance from the Property: N/A (Property)

Assumed Groundwater Gradient: N/A (Property)

Regulatory Data Summary: The facility is listed as a RCRA SQG for generating more than 100 and less than 1,000 kilograms (kg) of hazardous waste during any calendar month. The FINDS and ECHO databases indicated that the property is listed and tracked on the RCRA database. No violations or releases are reported.

Discussion: Based on the absence of reported violations or releases, these listings are not considered to represent an environmental concern to the property.

The following listing(s) with a known or significant potential for release and impact in, on, or at the property were identified in the federal agency databases searched. State database listings, corresponding to these federal database listings, are also discussed below.

Cads Only Inc / Klauers Inc

750 Comstock Street

Databases: CA CUPA Listings, CA NPDES, CA WDS, RCRA NonGen / NLR, FINDS, ECHO

Approximate Distance from the Property: Adjacent to the north, beyond Central Expressway

Assumed Groundwater Gradient: Down-gradient

Regulatory Data Summary: The RCRA NonGen / NLR listing indicates the site is a non-generator of hazardous waste. The FINDS and ECHO listings indicate the facility is listed on the RCRA database. The CA CUPA listing indicates the site no longer generates waste. The CA NPDES listing is in regards to an industrial permit for a 42,000 square foot area between 2008 and 2014. The Waste Disposal System (WDS) listing indicates the site treats and/or disposes of liquid or semisolid wastes. No violations or leaks were reported.

Discussion: Based on the absence of reported violations or releases, these listings are not considered to represent an environmental concern to the property.

Cutter Precision Metals Inc

700 Comstock Street

Databases: CA CUPA Listings, CA HAZNET, CA WDS, RCRA NonGen / NLR, FINDS, ECHO

Approximate Distance from the Property: Adjacent to the north, beyond Central Expressway

Assumed Groundwater Gradient: Down-gradient

Regulatory Data Summary: The RCRA NonGen / NLR listing indicates the site is a non-generator of hazardous waste. The FINDS and ECHO listings indicate the facility is listed on the RCRA database. The CA CUPA listing indicates the site generates between 5 and 25 tons of waste per year. The site is listed in the CA HAZNET database for the disposal of waste oil, mixed oil, unspecified oil-containing waste, and unspecified sludge waste between 1993 and 2000. The site also disposed metal dust, tank bottom waste, and other inorganic solid waste in 1993. No violations or leaks were reported.

Discussion: Based on the absence of reported violations or releases, these listings are not considered to represent an environmental concern to the property.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Digital Realty Trust, Inc.
2825 and 2845 Lafayette Street
Santa Clara, California

Owens Corning

960 Central Expressway

Databases: RCRA-SQG, TRIS, FINDS, CA WDS, NPDES, CA LUST, CA FID UST, HIST UST, CA HIST LUST, AST, SWEEPS UST, HAZNET, CA EMI, ENVIROSTOR, HIST CORTESE, CA CHMIRS, CA CUPA Listings, CA SLIC, TSCA, US AIRS, SEMS-Archive

Approximate Distance from the Property: Adjacent to the west, across Lafayette Street

Assumed Groundwater Gradient: Cross-gradient

Regulatory Data Summary: The facility was listed on the RCRA-SQG database with no violations found. The facility is listed on the FINDS database with reference to the Aerometric Information Retrieval System (US AIRS) facility, the National Emissions Inventory, California Hazardous Waste Tracking System, Toxics Release Inventory System (TRIS), and RCRA database. The NPDES database listing is for the discharge of industrial storm water. The SEMS Archive listing indicates the site is not on the Federal NPL. The site is listed in the Toxic Substances Control Act (TSCA) database for manufacturing or importing toxic chemicals.

The facility is listed on the CA LUST database for a release of gasoline that impacted groundwater. The LUST case was closed October 1, 2001. The facility is listed on the CA FID UST database as an active site and on the HIST UST database as a manufacturing facility with two underground storage tanks (USTs) installed in 1980, including one 4,000-gallon unleaded gasoline UST and one 2,000-gallon product UST. The facility is listed on the AST database for one 20,000-gallon AST (contents unknown). The facility is listed on the SWEEPS UST database for one 4,000-gallon regular unleaded gasoline UST. The facility is listed on the HAZNET database for disposal of other inorganic solid waste, liquids with halogenated organic compounds, other organic solids, and paint sludge. The facility is listed on the EMI database for permitting with the BAAQMD in 1987, 1990, and 1995 through 2005. Owens Corning is listed on the Envirostor database with a referral to the RWQCB.

ATC reviewed the "Fuel Leak Site Case Closure" issued on October 1, 2001 by the Santa Clara Valley Water District. The case closure identified that residual petroleum hydrocarbon contamination still exists at the site; "however, the concentration levels are below regulatory concern." Further, residual solvent contamination exists at the site. However, "as part of the Regional Water Quality Control Board Site Cleanup Requirements Order No. 90-010 and 93-148, the up-gradient site, Former Monsanto Company Facility (Spieker Property), at 925 Walsh Avenue, Santa Clara, will continue solvent remediation in the future." It is presumed that this Monsanto facility is identified below as being at 2710 Lafayette Street.

Two USTs were removed from this site, including one 4,000-gallon gasoline UST removed in September 1998 and one 2,000-gallon Stoddard solvent UST removed in November 1988. Twelve groundwater monitoring wells were installed at the site and the highest groundwater depth recorded at the site was 7.30 feet bgs, with the lowest depth recorded at 11.17 feet bgs. The direction of groundwater flow was noted to the north.

The facility is listed on the California Hazardous Materials Information Resource System (CHMIRS) database for a release of phenol formaldehyde resin caused by sight glass rupture. In addition, the facility is listed on the CA WDS database as an active facility with a continuous discharge that is under waste discharge requirements

Discussion: Based on the cross-gradient location of the site with respect to the property and the closed status of the LUST case these listings are not considered to represent an environmental concern to the property.

W.L. Gore & Associates

2890 De La Cruz Boulevard

Databases: RCRA-SQG

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Digital Realty Trust, Inc.
2825 and 2845 Lafayette Street
Santa Clara, California

Approximate Distance from the Property: Adjacent to the east

Assumed Groundwater Gradient: Cross-gradient

Regulatory Data Summary: The facility is listed as a RCRA-SQG for the disposal of ignitable wastes. No violations or releases were reported.

Discussion: Based on the absence of reported violations or releases, this listing is not considered to represent an environmental concern to the property.

Based on distance, topography, assumed groundwater gradient, current regulatory status, and/or the absence of reported releases, none of the other sites listed in the federal agency databases are considered to represent a likely past, present or material threat of release on the property.

5.1.2 State and Tribal Database Findings

The property was identified on several state databases reviewed. These listings corresponded with federal database listings and therefore were discussed in Section 5.1.1.

The following listing(s) with a known or significant potential for release and impact in, on, or at the property were identified in the state and tribal databases searched.

MC Auto Dismantler
780 Comstock Street

Databases: CA CUPA Listings, CA NPDES

Approximate Distance from the Property: Adjacent to the north, beyond Central Expressway

Assumed Groundwater Gradient: Down-gradient

Regulatory Data Summary: The site is listed in the CA CUPA listing for generating between 100 kg and 5 tons of waste per year. The National Pollutant Discharge Elimination System (NPDES) listing is for discharging wastewater to the storm sewer in 1996. No violations were reported.

Discussion: Based on the absence of reported violations or releases, these listings are not considered to represent an environmental concern to the property.

Central Income Partners Holding Company LLC / Katryzyna Grzyb EMS
2845 Lafayette Street

Databases: CA HAZNET, CA EMI

Approximate Distance from the Property: N/A (Property)

Assumed Groundwater Gradient: N/A (Property)

Regulatory Data Summary: The property is listed in the California Hazardous Waste Information System (CA HAZNET) database for the offsite disposal of 0.025 tons of inorganic solid waste and 0.4 tons of asbestos-containing waste in 2014. The California Emissions Index (EMI) database listing is for emissions permits from 2013 to 2015.

Discussion: Based on the absence of reported violations or releases, these listings are not considered to represent an environmental concern to the property.

Digital BH 800 LLC
2805 Lafayette St

Databases: CA AST

Approximate Distance from the Property: Adjacent south

Assumed Groundwater Gradient: Up-gradient

Regulatory Data Summary: The site is listed in the CA AST (California Aboveground Storage Tank) database for a 650-gallon diesel tank. No violations or leaks are reported for the site.

Discussion: Based on the absence of reported leaks or violations, this listing is not considered to represent an environmental concern to the property.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Digital Realty Trust, Inc.
2825 and 2845 Lafayette Street
Santa Clara, California

Honda's Only Auto Center-Dismantling

790 Comstock Street

Databases: CA CUPA Listing

Approximate Distance from the Property: Adjacent to the north, beyond Central Expressway

Assumed Groundwater Gradient: Down-gradient

Regulatory Data Summary: The site is listed in the California Certified Unified Program Agency (CA CUPA) listing for generating between 100 kg and 5 tons of waste per year. No violations or releases were reported.

Discussion: Based on the absence of reported violations or releases, this listing is not considered to represent an environmental concern to the property.

Clementina Yard

840 Comstock Street

Databases: CA LUST, CA HIST CORTESE, CA FID UST, CA HIST LUST, CA SWEEPS UST

Approximate Distance from the Property: Adjacent to the north, across Central Expressway

Assumed Groundwater Gradient: Down-gradient

Regulatory Data Summary: This facility was listed on the CA HIST CORTESE database with no further information provided. The facility was listed on the CA leaking underground storage tank (CA UST) database for a release of gasoline which impacted groundwater in October 1986. The case was granted closure by the Santa Clara County Local Oversight Program (LOP) on August 29, 1996. This facility was listed on the CA FID UST database as an active facility and on the HIST UST and SWEEPS UST databases for one 1,000-gallon regular gasoline UST installed in 1970, one 550-gallon diesel fuel UST installed in 1970, and one 1,000-gallon unleaded gasoline UST installed in 1970.

Discussion: Based on the down-gradient location from the property and the current regulatory status of the LUST case, these listings are not considered to represent an environmental concern to the property.

Anderson Property / A&A Foreign Auto Wreckers Inc

800 Comstock Street

Databases: CA LUST, CA CUPA Listings, CA HIST LUST

Approximate Distance from the Property: Adjacent to the north, across Central Expressway

Assumed Groundwater Gradient: Down-gradient

Regulatory Data Summary: The facility was listed on the CA CUPA Listings database for generating less than 5 tons of waste per year. This facility was listed on the CA LUST and CA HIST LUST databases for a gasoline release which impacted the soil at the site. The case was granted closure by the Santa Clara LOP on June 8, 2000.

Discussion: Based on the limited impact (onsite soil only) and the current regulatory status of the LUST case, these listings are not considered to represent an environmental concern to the property.

Monsanto Chemical Company / CAMSI IV Property

2710 Lafayette Street

Databases: CA SLIC, HIST CORTESE, CA Envirostor, CA ENF, CA Cortese

Approximate Distance from the Property: 1,000 feet to the southwest

Assumed Groundwater Gradient: Up-gradient

Regulatory Data Summary: The facility was listed on the SLIC database as an open case under remediation. The release at this site involved a release of solvents, including TCE that impacted groundwater. According to the EDR database report, the Monsanto Company owned the site from 1950 through 1983. Monsanto discharged liquid wastes on a portion of the site from the mid-1960s to 1975, and buried solid waste in seven trenches elsewhere on the site. VOCs, fuel hydrocarbons, and other chemicals/wastes, including PCBs, have been found on the site. This facility is listed on the Envirostor database as a site referred to the RWQCB. According to the EDR database report,

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Digital Realty Trust, Inc.
2825 and 2845 Lafayette Street
Santa Clara, California

“the present level of contamination at the site poses a significant threat to public and environmental health” and noted that both soil and groundwater were contaminated. Groundwater was contaminated with solvents, including TCE.

ATC reviewed information for the Monsanto Chemical Company facility from the RWQCB GeoTracker (<http://geotracker.swrcb.ca.gov>). According to GeoTracker, “the Monsanto Company owned the site from about 1950-1983, the eastern portion of the property was developed and used by Monsanto for the manufacture of plastics and resins. Monsanto discharged liquid wastes on a portion of the property from the mid-1960s to 1975, and buried solid waste in seven trenches elsewhere on the property. Monsanto also maintained one or more above-ground tanks (removed in 1985) and a UST, which was discovered in 1995. VOCs, fuel hydrocarbons, and other chemicals/wastes, including PCBs, have been found on the site.” Monsanto “commenced site investigations in 1981. The Regional Water Board adopted Site Cleanup Requirements (SCRs) in 1989 and amended in 1991, and revised these in 1992. The site is currently regulated under SCR 92-106, and Waste Discharge Requirements (WDR) 90-160 for the infiltration of treated groundwater. SCR 92-106 was amended in 1996 by SCR 96-140.”

According to the RWQCB “Fact Sheet” for the Monsanto Chemical Company site, the facility was located at 2710 Lafayette Street at the northwest corner of Walsh Avenue and Lafayette Street. On the eastern portion of the property, Monsanto built and operated a plastic and resins manufacturing plant. Between 1968 and 1983, “a small portion of the site was leased to Hunter Technology Corporation and used for semiconductor research and development.” All structures on the site were demolished in 1983 and the site was vacant until 1995, when the existing warehouse buildings were built.

During an investigation “related to the presence and distribution of the chemical HMBA (no longer present) in a former filter washing area, TCE was discovered in ground water beneath the site. Starting in 1986 and continuing until 1990 a remedial investigation focusing on the occurrence and distribution of TCE was performed by Kleinfelder Inc. for the former Monsanto Company under the oversight of the RWQCB, San Francisco Bay Region. The investigation concluded that the source of the TCE was located within the confines of the former Hunter Technology lease area (south side of the site), however no TCE storage tanks, conveyance facilities or soil source were discovered. A TCE plume in shallow ground water was delineated on the property extending to the Owens Corning on the north side of the site. TCE concentrations in the ground water were found to exceed maximum contaminant levels (MCLs) for drinking water.”

However as previously mentioned, in February 2005, the RWQCB issued a NFA letter for 800 Central Expressway and concurred with previous assessments that CVOC contamination at the property likely originated from the Monsanto site. Based on ATC’s review of the available groundwater data, the concentrations of TCE in all the onsite wells (M-1, M-2, M-3, M-5) were below current agency screening levels.

Discussion: The release at this facility involved the release of TCE that impacted groundwater. Because this site is located up-gradient of the property, there is a potential that groundwater impact recorded at the property in 1987 originated from this site. Therefore, ATC considers this release to be a *historical recognized environmental condition* to the property.

Based on distance, topography, assumed groundwater gradient, current regulatory status, and/or the absence of reported releases, none of the other sites listed in the state or tribal agency databases are considered to represent a likely past, present or material threat of release on the property.

5.1.3 Local Environmental Records Sources

Santa Clara County Environmental Health Department (SCCEHD)

ATC submitted a written request to the SCCEHD for records pertaining to the property. The SCCEHD has not provided a response to ATC's request as of the date of this report. If information becomes available to ATC that alters the conclusions and/or recommendations presented herein, an addendum will be submitted.

Local Environmental Agency

ATC contacted the RWQCB, San Francisco Office and requested available files for the property. The RWQCB has not provided a response to ATC's request as of the date of this report. If information becomes available to ATC that alters the conclusions and/or recommendations presented herein, an addendum will be submitted.

However, ATC reviewed the February 3, 1987 letter report issued by Emcon Associates (Emcon) to Sobrato Development Companies on the RWQCB GeoTracker website, <http://geotracker.swrcb.ca.gov> (GeoTracker). The letter report addressed a field investigation completed at 800 Central Expressway, which included the property. At the time of the report, the three low-rise buildings on the property were developed as offices and light assembly facilities for National Semiconductor Corporation (NSC). Prior to the current development, which was approximately four years old at the time of the report (1987), the property "was occupied by a concrete-pipe manufacturing facility." The building that housed this facility "was located approximately parallel to and beneath the currently existing buildings on the west side of the site." Activities at the property prior to the pipe manufacturing operation were unknown.

According to Emcon, the direction of groundwater flow in the area is to the northeast. Further, "numerous older industrial sites located to the south, up-gradient of the project site have documented ground-water contamination problems." The objectives of the field investigation were to develop data on the hydrogeologic conditions and the extent of chemicals in soils and groundwater." Ten exploratory borings were drilled. Five of the exploratory borings were drilled to depths ranging from two to 10.5 feet. Five additional borings were drilled and converted to monitoring wells in the shallow, first encountered groundwater system. The monitoring wells were located around the perimeter of the property.

Geologic conditions were assessed in the first 28 feet. Conditions encountered "consist of buried stream channels and alluvium sediments (clays and silts) deposited in an estuarine environment. Typically, the site conditions consist of 15 to 20 feet of silty clay overlying a 2.5 to 5 foot layer of clayey or gravelly sand. Silty clay underlies the sand to the depths investigated and water was encountered at 13 to 14 feet below the ground surface. The actual ground-water gradient was not established across the site, but the regional direction is to the northeast based on published information."

Soil samples were analyzed for organochlorine pesticides, PCBs, asbestos and semi-volatile and non-volatile fuel hydrocarbons (waste oil). None of the soil samples exceeded the total threshold limit concentration (TTL) values for asbestos, "although a trace of asbestos was noted in Boring SB-5." Organochlorine pesticides and PCBs were not detected in any of the soil samples tested. Waste oil "was only detected in Borings SB-2 and SB-3; however, the levels are below that considered hazardous" by the San Francisco Bay RWQCB.

Groundwater samples were collected from each of the five monitoring wells and tested for oil and grease, organochlorine pesticides, PCBs, and VOCs. Groundwater samples from wells M-4 and M-5 contained VOCs above the California DHS action levels. Emcon recommended two additional soil samples be collected and tested for VOCs in order to determine whether the source of VOCs "is from the Sobrato property or from an up-gradient source."

ATC further reviewed a March 3, 1987 "Soil Sampling at Lafayette Site" report, also prepared by Emcon. The letter report detailed additional sampling activities designed to sample the soil immediately adjacent to monitoring wells M-4 and M-5, (refer to the Appendix B Site Map).

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Digital Realty Trust, Inc.
2825 and 2845 Lafayette Street
Santa Clara, California

Groundwater samples collected from M-4 in March 1987 contained maximum concentrations of 110 ug/L TCE, 2 ug/L 1,1,1-trichloroethane (1,1,1-TCA), and 9 ug/L trans-1,2-dichloroethene (t-1,2-DCE). In addition, groundwater samples collected from M-5 in March 1987 contained maximum concentrations of 78 ug/L TCE and 190 ug/L t-1,2-DCE. Additionally, low concentrations of TCE and t-1,2-DCE (3 and 2 ug/L, respectively) were detected in well M-2; according to Emcon, "the concentration of TCE in Well M-2 is below the DHS action level, and no action level has been established for t-1,2-DCE." According to Emcon, VOCs "were not detected in down-gradient wells M-1 and M-2", located at the northern side of the property near Central Expressway.

Based on a review of the "Soil Boring and Well Location Map" included with the Emcon letter report, groundwater monitoring well M-4 (and soil boring SM04) was located near Lafayette Street at the south adjacent site and monitoring well M-5 (and soil boring SM05) was located on the south side of the property in the parking area between the buildings at 2805 and 2825 Lafayette Street. Soil samples that were collected in March 1987 included two soil samples collected from between 2.5 and 3 feet bgs at each of the two soil boring locations. The laboratory analysis of the soil samples (designated as SM04 and SM05) "showed no detectable levels of VOCs." Emcon determined that "because VOCs were not detected in the shallow soils adjacent to wells M-4 and M-5 it is unlikely that the VOCs detected in the ground water were caused by past site activities." Therefore, "it is probable that the VOCs detected in the ground water in Wells M-4 and M-5 are due to migration from an up-gradient (i.e. southern), off-site source."

Refer to Section 1.2 and 1.4 for further information regarding ATC's recommendations for the property.

Department of Toxic Substances Control (DTSC)

ATC contacted the Department of Toxic Substances Control (DTSC) to review available information regarding the property. Ms. Ruth J. Saroian of the DTSC responded on April 27, 2018 and stated no records were available for the property. In addition, ATC spoke with Mr. Carl Rose, Files Coordinator with the DTSC in Berkeley, California, via telephone on April 26, 2018. He mentioned that all information for the site at the DTSC has been entered on the Envirostor website and no files are available at the Berkeley DTSC.

Furthermore, according to the DTSC EnviroStor database (<http://www.envirostor.dtsc.ca.gov/public>), the DTSC has no records pertaining to the property addresses of 700 Central Expressway, 750 Central Expressway, 2825 Lafayette Street, and 2845 Lafayette Street. As discussed within Section 5.1.1, records were reviewed for the prior address on the property (Certainteed at 2885 Lafayette Street). This information is discussed in detail within Section 5.1.1.

In addition to the Site Screening completed by the DTSC in 2003 which concluded No Further Action was necessary for the Certainteed site, the United States Environmental Protection Agency (EPA) completed a Preliminary Assessment at the property in 1991. This report, "Environmental Priorities Initiative – Preliminary Assessment" was prepared by Ecology and Environment, Inc. under direction of the EPA. A copy of the report is included in Appendix L. The EPA report concluded "the site was certified closed by DHS in 1983 and the site is currently entirely paved." Certainteed "removed soil and remaining asbestos wastes prior to the certified closure of the site." Follow-up samples "collected from the site after cleanup showed no detectable levels (less than 1 percent) of asbestos contamination." No issues were identified in this report.

Please refer to Section 1.2 and 1.4 for further information regarding ATC's recommendations for the property.

Santa Clara Fire Department

ATC requested a search of available records pertaining to storage tanks, hazardous materials, or incident of fire files for the property. The department has not provided a response to ATC's request as of the date

of this report. If information becomes available to ATC that alters the conclusions and/or recommendations presented herein, an addendum will be submitted.

Bay Area Air Quality Management District (BAAQMD)

ATC requested data for the property from the BAAQMD. The BAAQMD has not provided a response to ATC's request as of the date of this report. If information becomes available to ATC that alters the conclusions and/or recommendations presented herein, an addendum will be submitted.

Building Department

ATC reviewed available building department records at the City of Santa Clara Building Department (SCBD). Available records are discussed in Section 5.3.7.

Department of Planning and Zoning

According to the City of Santa Clara Planning Department (SCPD), the property is zoned ML, light industrial. This zoning appears to be appropriate for the current use of the property.

Electrical Utility Company

ATC confirmed that PG&E provides electricity to the property.

Water Utility

The drinking water utility provider for the property and surrounding area is the Santa Clara Valley Water District. According to the March 2018 Santa Clara Valley Water District Annual Water Quality Report, the municipally supplied water meets or exceeds all drinking water standards, including those for lead. A copy of the water quality report is included in Appendix L.

Sewer Utility

ATC confirmed with the City of Santa Clara Planning Division sanitary and storm sewer services are provided to the property through the City of Santa Clara.

Other Local Environmental Records Sources

No additional local environmental records sources were reviewed.

5.2 Physical Setting Sources

5.2.1 Topography

Based on the United States Geological Survey (USGS) 7.5-Minute Topographic Map Series, *San Jose West, California, Quadrangle* Topographic Map, dated 2012, the property is located approximately 43 feet above mean sea level (MSL) and has a sloping topography towards the north/northeast.

A copy of the topographic map is included in Appendix A.

5.2.2 Geology

Based on the Geologic map of the Cupertino and San Jose West quadrangles, Santa Clara and Santa Cruz Counties, California, dated 2007, the property is primarily underlain by Surficial sediments from the

Holocene Era. Surficial sediments include silty clay and organic clay, fossiliferous; represents intra-fan areas.

ATC further reviewed the February 3, 1987 letter report issued by Emcon to Sobrato Development Companies for the property. According to Emcon, geologic conditions encountered at the property “consist of buried stream channels and alluvium sediments (clays and silts) deposited in an estuarine environment. Typically, the site conditions consist of 15 to 20 feet of silty clay overlying a 2.5 to 5 foot layer of clayey or gravelly sand. Silty clay underlies the sand to the depths investigated and water was encountered at 13 to 14 feet bsg.

5.2.3 Soils

The United States Department of Agriculture (USDA) Soil Conservation Service Soil Survey of Santa Clara County, California, classifies the surficial soils in the vicinity of the property as urban land, 0 to 2 percent slopes.

A copy of the soil map can be found in Appendix L

5.2.4 Hydrology

Considering the surface topography for the property area, as interpreted from the USGS San Jose West Quadrangle map, local groundwater would be expected to flow toward the northeast. Therefore, in assessing potential off-site environmental impacts, facilities located directly southwest of the property are of primary concern. However, actual groundwater flow direction is often locally influenced by factors such as underground structures, seasonal fluctuations, soil and bedrock geology, production wells, and other factors beyond the scope of this study. The actual groundwater flow direction under the property can be accurately determined only by installing groundwater-monitoring wells, which was beyond the scope of this project.

ATC reviewed the February 3, 1987 letter report issued by Emcon to Sobrato Development Companies for the property. According to Emcon, the direction of groundwater flow in the area is to the northeast and water was encountered at 13 to 14 feet bsg.

5.2.5 Other Physical Setting Sources

Floodplains

According to the Federal Emergency Management Agency (FEMA), the property primarily is located in Flood Zone X, identified by FEMA as areas determined to be outside [of] the 0.2% annual chance floodplain. The east portion of the property is located in Flood Zone AH, identified by FEMA as areas within the 100-year flood zone. (Flood Insurance Rate Map [FIRM] Map Number 06085C0227H, dated May 18, 2009).

A copy of the FIRM is included in Appendix L.

Wetlands

Based on a review of the United States Department of the Interior, National Wetlands Inventory (NWI) Map (online Wetlands Mapper), there are no jurisdictional wetlands on the property. Furthermore, ATC did not observe any areas suggestive of wetlands at the property.

A copy of the National Wetlands Inventory map is included in Appendix L.

5.3 Historical Records Sources

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Digital Realty Trust, Inc.
2825 and 2845 Lafayette Street
Santa Clara, California

The following table summarizes the findings of the research presented below pertaining to historical property and surrounding area uses.

| HISTORICAL USE SUMMARY | | | | |
|------------------------|----------------------------|--------------------------|--|--|
| Period | Identified Historical Uses | | Source(s) | Intervals/Comments |
| | Property | Surrounding Area | | |
| Prior to 1940 | Undeveloped | Undeveloped | Aerial Photograph Topographic Maps | A topographic map dated 1889 was the earliest record available. No significant data gaps. |
| 1941-1960 | Undeveloped Industrial | Commercial Industrial | Aerial Photographs Topographic Maps | Western adjacent manufacturing plant under development by at least 1948. The property was improved for industrial purposes by at least 1956 with an asbestos piping plant. No significant data gaps. |
| 1961-1980 | Industrial | Commercial Industrial | Aerial Photographs Topographic Maps City Directories | Asbestos cement pipe manufacturing plant from 1962-1982; No significant data gaps. |
| 1981-2000 | Industrial | Commercial Industrial | Aerial Photographs City Directories Building Department Tax Files | The property was redeveloped with the current buildings between 1982 and 1984. No significant data gaps. |
| 2001 - present | Industrial | Industrial Commercial | Aerial Photographs, Topographic Maps, City Directories, Property Tax Files, Site Visit | No data gaps |

5.3.1 Aerial Photographs

ATC reviewed available aerial photographs of the property and surrounding area obtained from EDR. Available aerial photographs ranged from 1939 to 2014. The following are descriptions and interpretations from the aerial photograph review. Copies of reproducible aerial photographs are included in Appendix F.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Digital Realty Trust, Inc.
2825 and 2845 Lafayette Street
Santa Clara, California

| AERIAL PHOTOGRAPH SUMMARY | | |
|---------------------------|-------------------|---|
| Year | Scale | Comments |
| 1939 | 1 inch = 500 feet | <p>Property: Undeveloped.</p> <p>Surrounding Area:</p> <p>North: Across Central Expressway appears to be undeveloped except for a home at the northeastern corner of Lafayette Street and Central Expressway.</p> <p>Northwest: Across Central Expressway at the intersection of Lafayette Street appears to be undeveloped.</p> <p>East: Railroad tracks, beyond which appears to be undeveloped.</p> <p>South: Undeveloped land.</p> <p>West: Undeveloped land.</p> |
| 1948 | 1 inch = 500 feet | <p>Property: No changes since the 1939 aerial photograph.</p> <p>Surrounding Area:</p> <p>North: No changes since the 1939 aerial photograph.</p> <p>Northwest: No changes since the 1939 aerial photograph.</p> <p>East: No changes since the 1939 aerial photograph.</p> <p>South: Undeveloped land and railroad tracks, beyond which are two light industrial buildings. The development in this area was less dense than in later aerial photographs and the light industrial building near the railroad tracks is not developed.</p> <p>West: Industrial plant building appears to be under development.</p> |
| 1950 | 1 inch = 500 feet | <p>Property: No changes since the 1948 aerial photograph.</p> <p>Surrounding Area:</p> <p>North: No changes since the 1948 aerial photograph.</p> <p>Northwest: No changes since the 1948 aerial photograph.</p> <p>East: No changes since the 1948 aerial photograph.</p> <p>South: No changes since the 1948 aerial photograph except for the addition of a small rectangular warehouse.</p> <p>West: Industrial plant building appears to be completed.</p> |
| 1956 | 1 inch = 500 feet | <p>Property: Developed with a rectangular light industrial building abutting Lafayette Street; the remainder of the property appeared to be used as a storage yard. A dark area appeared at the corner of Lafayette Street and Central Expressway, which appeared to be an area of pavement or settling pond.</p> <p>Surrounding Area:</p> <p>North: Across Central Expressway, commercial structures and smaller structures (storage buildings or homes) appeared to be developed along the road.</p> <p>Northwest: Across Central Expressway at the intersection of Lafayette Street appears to be undeveloped.</p> <p>East: Railroad tracks, beyond which appeared to be a rectangular building near the corner of Central Expressway and De La Cruz Boulevard with a yard that extends along Central Expressway towards the property.</p> <p>South: No changes since the 1948 aerial photograph. However, a rectangular light industrial building extends south from the property.</p> <p>West: No changes since the 1948 aerial photograph.</p> |

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Digital Realty Trust, Inc.
2825 and 2845 Lafayette Street
Santa Clara, California

| AERIAL PHOTOGRAPH SUMMARY | | |
|--------------------------------------|-------------------|---|
| Year | Scale | Comments |
| 1963 | 1 inch = 500 feet | <p>Property: No changes since the 1956 aerial photograph.</p> <p>Surrounding Area:</p> <p>North: No changes since the 1956 aerial photograph.</p> <p>Northwest: Across Central Expressway at the intersection of Lafayette Street, three small commercial buildings are developed near the northwestern corner of Lafayette Street and Central Expressway.</p> <p>East: No changes since the 1956 aerial photograph.</p> <p>South: No changes since the 1956 aerial photograph.</p> <p>West: No changes since the 1956 aerial photograph.</p> |
| 1968 | 1 inch = 500 feet | <p>Property: No changes since the 1963 aerial photograph.</p> <p>Surrounding Area:</p> <p>North: No changes since the 1963 aerial photograph.</p> <p>Northwest: No changes since the 1963 aerial photograph.</p> <p>East: Railroad tracks, beyond which appeared to be undeveloped land.</p> <p>South: No changes since the 1963 aerial photograph. However, the areas appear to be further developed.</p> <p>West: No changes since the 1963 aerial photograph.</p> |
| 1974 | 1 inch = 500 feet | <p>Property: No changes since the 1968 aerial photograph.</p> <p>Surrounding Area:</p> <p>North: Across Central Expressway at the intersection of Lafayette Street, at least four commercial buildings are developed along the road, though the building close to De La Cruz Boulevard currently referenced as 705 Comstock Street, as observed in later aerial photographs, was not developed.</p> <p>Northwest: Across Central Expressway at the intersection of Lafayette Street, a commercial building that appeared similar to the existing structure.</p> <p>East: No changes since the 1968 aerial photograph.</p> <p>South: No changes since the 1968 aerial photograph.</p> <p>West: No changes since the 1968 aerial photograph.</p> |
| 1982 | 1 inch = 500 feet | <p>Property: No changes since the 1974 aerial photograph.</p> <p>Surrounding Area:</p> <p>North: Across Central Expressway, commercial buildings that appeared similar to the existing structures.</p> <p>Northwest: No changes since the 1974 aerial photograph.</p> <p>East: No changes since the 1974 aerial photograph.</p> <p>South: A continuation of the rectangular light industrial building abutting Lafayette Street and storage yard from the property. In addition, railroad tracks, beyond which are light industrial buildings that appeared similar to the existing structures.</p> <p>West: No changes since the 1974 aerial photograph.</p> |
| 1993 1998 2006 2010 2014 | 1 inch = 500 feet | <p>Property: Developed with the two existing buildings and surrounding parking lot by the 1993 aerial photograph.</p> <p>Surrounding Area:</p> <p>North: No changes since the 1982 aerial photograph.</p> <p>Northwest: No changes since the 1982 aerial photograph.</p> <p>East: Railroad tracks, beyond which appeared to be developed with the existing commercial buildings / office park and asphalt-paved parking areas.</p> <p>South: No changes since the 1982 aerial photograph. However, the current warehouse at 2805 Lafayette Street appears.</p> <p>West: No changes since the 1982 aerial photograph.</p> |

The review of aerial photographs identified that the property was developed with the existing light industrial buildings by at least 1993. The property was undeveloped in 1939 and 1948, and was developed with a rectangular industrial building and yard from at least 1956 through at least 1982. During the prior industrial development of the property, a settling pond was located in the northwestern corner of the property that was used within the manufacturing processes for asbestos-cement piping. This former use of the property,

and associated release/impacts, are considered to represent a *historical recognized environmental condition* to the property. Refer to Section 5.1.1 and 5.1.3 for further discussion.

Copies of reproducible aerial photographs are included in Appendix F.

5.3.2 Fire Insurance Maps

Sanborn Fire Insurance Maps were initially produced to provide information to the insurance industry on the fire risks associated with buildings and other structures located within urban areas. These maps may now be utilized as a resource to document land use and structural change over time.

A search for fire insurance maps for the property and surrounding area was conducted by EDR. The following are descriptions and interpretations from the fire insurance map reviews. Documentation is included in Appendix G.

| FIRE INSURANCE MAP SUMMARY | |
|----------------------------|--|
| Year | Comments |
| 1961 | Property: No coverage. Surrounding Area: North: No coverage. East: No coverage. South: A portion of the Keasbey E. Mattison Company Asbestos Pipe Manufacturing Plant is depicted. West: No coverage. |
| 1966 | Property: No coverage. Surrounding Area: North: No coverage. East: No coverage. South: No change since the 1961 Sanborn Map. West: No coverage. |

The south adjacent asbestos pipe manufacturing plant represents a HREC and is further discussed within Section 5.1.

5.3.3 Property Tax Files

ATC reviewed available information from the Santa Clara County Assessor's Office for historical ownership information on the property. The Assessor's Office was able to provide the name of the current owner of the property, Central Income Parts holding Co. LLC, which has owned the property since May 18, 2012. Prior ownership information was not available from the Assessor's Office via telephone.

5.3.4 Recorded Land Title Records

The acquisition of recorded land title records was not required by the scope of work for the Phase I ESA.

5.3.5 Historical USGS Topographic Maps

ATC reviewed available historical USGS Topographic Quadrangles for information regarding past uses of the property. EDR provided historical topographic maps dated 1889, 1897, 1899, 1953, 1961, 1968, 1973, 1980, and 2012.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Digital Realty Trust, Inc.
2825 and 2845 Lafayette Street
Santa Clara, California

The property appeared undeveloped and railroad tracks were present to the east in the 1889, 1897, and 1899 topographic maps. The property was developed with a rectangular building directly adjacent to Lafayette Street from at least 1953 through 1980.

The adjacent site to the west appeared to be developed with a large plant building from at least 1953 through 1980. Areas to the north, across Central Expressway, appeared to be developed with homes and/or small commercial buildings in 1953, 1961, and 1968. More structures were present to the north and northwest by 1973 and 1980.

The area to the east of the property appeared to be undeveloped except for the railroad tracks on all of the USGS maps. The areas to the south were developed with a gas tank in 1953 and a portion of the rectangular building on the property. The area was undeveloped by at least 1961 through 1973. By 1980, the area to the south was developed with various small commercial buildings opposite the railroad tracks. However, the property and surrounding areas appear undeveloped once again in the 2012 topographic map.

A gas tank was noted to the south of the property in 1953. This tank was no longer present by the 1961 map. Based on the length of time since this gas tank was noted to the south and the absence of regulatory listings for this facility within the EDR database report, this gas tank is not an environmental concern for the property.

The review of historical USGS Topographic Quadrangles did not specifically identify past uses indicating *recognized environmental conditions* at the property or surrounding area.

5.3.6 City Directories

Research regarding the availability of historical city directories was obtained from EDR. The following are descriptions and interpretations from the historical city directory review. Documentation is included in Appendix G.

| CITY DIRECTORY SUMMARY | |
|------------------------|--|
| Year | Comments |
| 1991 | <p>Property: Hitachi Data Systems Corp (750 Central Expressway)</p> <p>Surrounding Area: Fujitsu ICL Systems Inc (800 Central Expressway) Owens Fiberglass Corporation (960 Central Expressway)</p> |
| 1996 | <p>Property: Hitachi Data Systems Corp (750 Central Expressway)</p> <p>Surrounding Area: ICL Retail Systems (800 Central Expressway) Owens Fiberglass Corporation (960 Central Expressway)</p> |
| 2001 | <p>Property: Hitachi Data Systems Corp (750 Central Expressway)</p> <p>Surrounding Area: Owens Fiberglass Corporation (960 Central Expressway) Various computer and construction companies (700 Comstock Street)</p> |

| CITY DIRECTORY SUMMARY | |
|------------------------|--|
| Year | Comments |
| 2010 | Property: WT BTI (700 Central Expressway) Hitachi Data Systems Corp (750 Central Expressway) Surrounding Area: Fujitsu ICL Systems Inc (800 Central Expressway) Various computer and construction companies (700 Comstock Street) All Auto Dismantling Inc, Toy Connection (750 Comstock Street) |

The review of city directories did not identify past uses indicating *recognized environmental conditions* in, on, or at the property or surrounding areas.

5.3.7 Building Department Records

ATC reviewed available historical building department records at EDR for information regarding past uses of the property and surrounding area from 2009 to 2016. The permits included fire alarm system modifications, rooftop HVAC replacements, electrical permits, ceiling hung air block installations, wall pump installations, interior and exterior alterations for a new lab, and electrical vehicle charging system installations.

ATC reviewed available records at the City of Santa Clara Building Department on April 30, 2018. No permits were available for 2825 and 2845 Lafayette Street. Significant records between 1983 and 2006 for the addresses 700 and 750 Central Expressway included the following:

700 Central Expressway

- Extensive grading permits
- Addition of a storm drain
- Roof-mounted equipment additions
- Interior alterations
- A fire permit to install one 173-gallon diesel fuel tank for an emergency generator
- 2nd floor interior demolition
- New diesel generator with 660-gallon diesel tank
- Planning permit for two new parking lots

750 Central Expressway

- Grading permits
- Additional underground piping
- Additional HVAC units
- Electrical permits for the computer rooms
- Demolition permit
- Nine-foot fence enclosure for 750 kiloWatt (kW) emergency generator
- Replacement of three cooling towers

No additional information was reviewed at the SCBD indicating the presence of *recognized environmental conditions* at the property.

5.3.8 Zoning/Land Use Records

According to the SCPD, the property is zoned ML, light industrial. This zoning appears to be appropriate for the current use of the property.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Digital Realty Trust, Inc.
2825 and 2845 Lafayette Street
Santa Clara, California

No historical zoning information was readily available for the property. However, according to ATC's research, the property was utilized for light industrial purposes from at least 1956 to 1982. Prior to 1956, the property was undeveloped land.

5.3.9 Prior Reports

The following provides a summary of information from prior reports made available to ATC for review. Documentation is included in Appendix H.

| Consultant/ Report Title | Date | Notes and Environmental Conditions | Conclusions & Recommendations |
|--|----------|--|---|
| Pond, Robinson & Associates LP (PR&A) / Report of Environmental Site Assessment | 04/03/07 | <ul style="list-style-type: none"> The buildings at 700 and 750 Central Expressway were occupied by Hitachi Data Systems and the building at 800 Central Expressway was used partially for a café for Hitachi Data Systems, while the remainder of the building was vacant. PR&A's research "indicated that the subject property was farmland from at least 1939 until the early 1950's. From the early 1950's until circa 1983, the subject property was occupied by various companies that manufactured asbestos cement pipe. From 1998 to the end of the first quarter of 2002, Applied Materials, Building 800 lease holder, was in the process of constructing an approximately 48,000 square foot "clean room" for the future manufacture of computer chips. Construction activities were halted in 2002 and the "clean room" was reportedly never completed due to a downturn in the electronics industry. Applied Materials maintained the lease through the fall of 2006, but never occupied the building." | <ul style="list-style-type: none"> No <i>recognized environmental conditions</i> were indicated and two <i>historical recognized environmental conditions</i> (HRECs) were discovered, as noted below. HRECs were identified as the former use of the property by CertainTeed Corporation for manufacture of asbestos-containing pipe products, for which a No Further Action letter was issued, and an additional HREC identified was the discovery of shallow groundwater contamination at the southwest corner of the property. PR&A stated that a no further action letter was issued by the RWQCB. No further assessment was recommended. |
| Ramboll Environ US Corporation (Ramboll) / Phase I Environmental Site Assessment | | <ul style="list-style-type: none"> The property was used as farmland between at least 1939 and 1950. Between approximately the mid-1950's and 1982, the site was used as an asbestos cement pipe manufacturing facility under the names Keasbey E Mattison (1953-1962) and CertainTeed Products Corporation (1962-1982). An oblong warehouse was located on the western portion of the site and extended to the property. Manufacturing operations included mixing asbestos fibers with concrete. CertainTeed also permitted the storage of third-party equipment | <ul style="list-style-type: none"> No RECs were indicated and two HRECs were discovered, as noted below. Beginning in 1981, the DHS oversaw the remediation and closure of a 26-acre asbestos pipe manufacturing facility formerly located on the property and south adjacent site. Clean-up efforts were conducted in 1983 and involved the removal of asbestos fibers from former buildings, surface soil, and between five and six feet below an asbestos slurry settling basin used in asbestos pipe manufacturing operations. Following the remediation and post-remediation sampling, the site was issued closure by the DHS in March 1983. Ramboll considers this matter a HREC. |

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Digital Realty Trust, Inc.
2825 and 2845 Lafayette Street
Santa Clara, California

| Consultant/ Report Title | Date | Notes and Environmental Conditions | Conclusions & Recommendations |
|-----------------------------|------|--|--|
| | | <p>(including PCB-containing transformation and equipment.</p> <ul style="list-style-type: none"> The current site buildings were constructed in the mid-1980s by the Sobrato Development Company. The buildings have been occupied by Hitachi Data Systems since at least the early 1990s. | <ul style="list-style-type: none"> In 1987, chlorinated volatile organic compounds (CVOCs) were detected in several wells located on the southern half of the property. Soil borings were subsequently advanced adjacent to these wells and analyzed for CVOCs. The samples did not contain detectable concentrations of CVOCs, indicating the site was likely not a source of contamination. Groundwater monitoring continued intermittently between the late 1980s and early 2000s. A petition for case closure was submitted to the RWQCB in 2004 and a NFA letter for 800 Central Expressway (which included the site) was subsequently issued. This concurred with previous assessments that CVOC contamination at the site likely originated from the nearby Monsanto property, located to the southwest. Based on the NFA status, Ramboll characterizes this matter as a HREC. Staining was observed near the hydraulic elevator equipment room of 2825 Lafayette Street. The stain was approximately 10 square feet in area. Ramboll considers this matter to represent a <i>de minimus condition</i>. The property may have historically been used for agricultural purposes from at least 1939 to the 1950s. Ramboll characterizes this finding as a <i>de minimus condition</i>, provided the site use remains commercial and the property is not re-zoned for residential use. Groundwater contamination by CVOCs has received closure at the site. The detected concentrations in all the onsite wells does not suggest a potential vapor intrusion concern under a continued commercial use scenario. However, additional evaluation is warranted if the property is ever rezoned for residential use in the future. |

5.3.10 Other Historical Sources

No other historical sources were reviewed.

6.0 SITE RECONNAISSANCE

The following is a summary of visual and/or physical observations of the property on the day of the site visit. Photographs can be found in Appendix C.

6.1 Methodology and Limiting Conditions

Mr. Gyan Rusconi-Rodrigues, Project Scientist for ATC, conducted the site reconnaissance on April 30, 2018 and was escorted by Mr. Dante Sanchez, Building Engineer at Hitachi Vantara. The site reconnaissance consisted of visual and/or physical observations of: the property and improvements; adjoining sites as viewed from the property; and, the surrounding area based on visual observations made during the trip to and from the property. Building exteriors were observed along the perimeter from the ground, unless described otherwise. Building interiors were observed as they were made safely accessible, unless described otherwise. The weather at the time of the site reconnaissance was warm and sunny with no visibility limitations.

6.2 Hazardous Substance Use, Storage, and Disposal

ATC observed the use, storage or disposal of hazardous substances on the property as summarized below.

| HAZARDOUS SUBSTANCE SUMMARY TABLE | | | | | | | |
|-----------------------------------|----------------------------|----------------------------|---|------------------|-----------------|---------------------|----------------------|
| Type/Use of Material | Quantity (No./Size) | Container Type | Location | Hazardous Waste? | MSDS or Labels? | Container Condition | Evidence of Release? |
| Janitorial Chemicals | Two/ Less than five gallon | Flammable Materials Closet | Storage rooms | No | Yes | Good | No |
| Cooling Tower Chemicals | Nine/ 55-gallon | Drum | Cooling tower fenced area | No | Yes | Good | No |
| Paint | 20/ One-gallon | Bucket | Storage rooms | No | Yes | Good | No |
| Pool Maintenance Chemicals | Three/ Five-gallon | Container | Storage rooms | No | Yes | Good | No |
| Diesel Fuel | One / 650-gallon | AST | Southwest of the 2825 Lafayette Street Building | Yes | Yes | Good | No |

Refer to Section 6.4 for further discussion regarding the onsite diesel fuel AST. The presence of the listed hazardous substances does not represent a *recognized environmental condition* based on observed conditions.

6.3 Underground Storage Tanks (USTs)

ATC did not observe evidence of USTs on the property.

6.4 Aboveground Storage Tanks (ASTs)

ATC observed evidence of ASTs on the property as summarized below.

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Digital Realty Trust, Inc.
2825 and 2845 Lafayette Street
Santa Clara, California

| AST SUMMARY TABLE | | | | | | | |
|---|----------------|------------------------|----------|--------------------|------------|--------------|-----------------------------|
| Location | Year Installed | Construction Materials | Contents | Capacity (gallons) | Use Status | Registration | Leak Detection & Prevention |
| Southwest of the 2825 Lafayette Street building | 2004 | Steel | Diesel | 650 | Active | Yes | Yes |

The diesel AST is associated with a backup generator at the property. According to the site contact, no known leaks or spills have occurred with respect to the AST. ATC observed the generators to be in good condition with no leaks or spills observed on the underlying concrete or surrounding area. Given the equipment age and observed condition, the AST is not considered to represent an environmental concern to the property.

6.5 Other Petroleum Products

ATC observed evidence of the use, storage or disposal of other petroleum products in, on or at the property as summarized below.

| OTHER PETROLEUM PRODUCTS | | | | |
|--------------------------|--|--------------------------------------|--------------------|--|
| Type of Material | Quantity & Container Type | Location | Use | Condition of Containers & Area |
| Elevator hydraulic fluid | In one passenger elevator at 2825 Lafayette Street | Elevator equipment room, first floor | Elevator operation | Fair, a 10 square foot stain was observed in the elevator room |
| Elevator hydraulic fluid | In one passenger elevator at 2845 Lafayette Street | Elevator equipment room, first floor | Elevator operation | Good, no leaks or spills; no reported system failures |

, ATC observed hydraulic oil staining on the floor near the hydraulic elevator room at 2825 Lafayette Street. The stain was approximately 10 square feet in area and did not extend to any floor drains. ATC considers the staining to be a *de minimus condition*.

6.6 Polychlorinated Biphenyls (PCBs)

Hydraulic oils used prior to 1979 may contain small quantities of PCBs. Potential hydraulic oil sources include, but are not limited to, hydraulic elevators, lifts, trash compactors, and air compressors.

Based on the age of the hydraulic elevators, discussed in Section 6.5, it is unlikely that hydraulic fluids utilized within the equipment contain PCBs. The observed stain in the elevator room at 2825 Lafayette Street is considered to be a *de minimus condition*.

ATC observed one hydraulic compactor located outside the south side of 2825 Lafayette Street. The hydraulic compactor was observed in good condition, without leaks and/or spills.

ATC observed seven hydraulic lifts at the loading docks of the property; five at 2825 Lafayette Street and two at 2845 Lafayette Street. The hydraulic lifts were observed in good condition without staining from leaks and/or spills.

ATC observed two pad-mounted, oil-insulated (with secondary containment), transformers located on the property. One of the transformers is located between the site buildings and the other transformer is located to the southwest of the 2825 Lafayette Street building. The transformers were not labeled as non-PCB; however, no evidence of staining or leaking was observed. It is presumed that both above-grade transformers were installed at the time of property development with the existing buildings between 1982

PHASE I ENVIRONMENTAL SITE ASSESSMENT

Digital Realty Trust, Inc.
2825 and 2845 Lafayette Street
Santa Clara, California

and 1984. The transformers are owned by the utility SVP. No evidence of leaks or other environmental concerns was observed at the transformers. Given the equipment age, utility ownership and observed conditions, the pad-mounted electrical transformers are not considered to represent an environmental concern to the property.

ATC observed fluorescent light fixtures inside the property buildings. Fluorescent light ballasts manufactured prior to 1979 may contain small quantities of PCBs. Given the age of the property improvements, it is not considered likely that the ballasts contain PCBs. Due to access limitations, the light ballasts were not examined for labels identifying their PCB-content. No indications of staining or leaking associated with the fluorescent light fixtures were noted during the property visit. Based on visual observations, the ballasts associated with the light fixtures do not appear to represent an environmental concern to the property. As a best management practice, ATC recommends that leaking or large number of ballasts whose PCB content cannot be determined without testing should be disposed of in accordance with applicable waste handling requirements for PCB units.

No other suspect PCB-containing equipment was observed at the property at the time of the property reconnaissance.

6.7 Unidentified Substance Containers

ATC did not observe the presence of unidentified substance containers on the property.

6.8 Nonhazardous Solid Waste

ATC observed evidence of the generation, storage or disposal of nonhazardous solid waste in, on or at the property as summarized below.

| NONHAZARDOUS SOLID WASTE SUMMARY TABLE | | | | | | |
|--|----------------------|----------|-----------------|-------------------------------------|---------------------------------------|----------------------|
| Type of Waste | Generation Process | Quantity | Type of Storage | Location | Disposal/Removal Method & Frequency | Evidence of Release? |
| Municipal solid waste | Routine operations | Several | Dumpster | Perimeter of buildings | Removed biweekly by Republic Services | No |
| Kitchen grease | Cafeteria operations | One | Dumpster | South side of 2825 Lafayette Street | When full | No |

The presence of the listed nonhazardous solid waste does not represent a *recognized environmental condition* based on observed conditions.

6.9 Wastewater

ATC observed evidence of wastewater generated, treated or discharged (including sanitary sewage and storm water) in, on or at the property or to adjoining properties as summarized below.

| WASTEWATER SUMMARY TABLE | | | |
|----------------------------|--------------------|-------------------|----------------|
| Type of Wastewater | Generation Process | Treatment System? | Discharged To? |
| Commercial sanitary sewage | Restrooms | No | Sanitary sewer |
| Stormwater | Stormwater runoff | No | Storm sewer |

6.10 Waste Pits, Ponds and Lagoons

ATC did not observe evidence of waste pits, ponds or lagoons in, on or at the property.

6.11 Drains and Sumps

ATC did not observe evidence of drains or sumps in, on or at the property outside of the restroom facilities.

6.12 Septic Systems

ATC did not observe evidence of a septic system in, on or at the property.

6.13 Stormwater Management System

Stormwater at the property flows over building rooftops, paved parking lots, roadways and landscaped areas, and travels towards the roadways adjacent to the property to drain into curb-inlets, which discharge into the municipal stormwater system. The property is a mix of landscaped areas and developed land with covered areas consisting of building footprints and parking lots. The observed vegetation did not exhibit signs of biological stress. The parking/driveway areas are paved and in good condition. No strong odors or stressed vegetation was observed.

6.14 Wells

ATC did not observe evidence of wells in, on or at the property. Four groundwater monitoring wells formerly existed on the site, but were reportedly decommissioned by 2005.

7.0 SUBSURFACE VAPOR MIGRATION

Hazardous gases (vapor) from subsurface sources, such as contaminated soil or groundwater can migrate into residential, commercial, and industrial buildings with any foundation type, including basements, crawlspaces, or slabs. According to EPA guidance, three conditions must exist for hazardous vapors to reach the interior of buildings from the subsurface environment underneath or near a building. First, a source of hazardous vapors must be present in the soil or in groundwater underneath or near a building. Second, vapors must form and have a pathway along which to migrate toward the building. Third, entry routes must exist for the vapors to enter the building, and driving forces must exist to draw the vapors into the building.

ATC considered the nature and extent of on-site and nearby sources of potential subsurface vapor migration by evaluating the current and historical usage of the property, the construction type and history, the physical setting, and the potential sources of subsurface vapor migration through the review of regulatory agency database information that was summarized in Section 5.0. Based on the evaluation of the known or suspected releases of hazardous substances or petroleum products, distance from the property, potential pathways, and soil type, et al, no potential subsurface vapor migration sources were determined to represent a recognized environmental condition.

Review of files for 800 Central Expressway, a south adjacent site, identified TCE-contaminated groundwater that appeared to be originating from an off-site up-gradient source. The letter reviewed, dated March 3, 1987 "Soil Sampling at Lafayette Site," prepared by Emcon detailed additional sampling activities designed to sample the soil immediately adjacent to monitoring wells M-4 and M-5, (refer to the Appendix B Site Map). Groundwater samples collected from M-4 in March 1987 contained maximum concentrations of 110 ug/L TCE, 2 ug/L 1,1,1-trichloroethane (1,1,1-TCA), and 9 ug/L trans-1,2-dichloroethene (t-1,2-DCE). In addition, groundwater samples collected from M-5 in March 1987 contained maximum concentrations of 78 ug/L TCE and 190 ug/L t-1,2-DCE. Additionally, low concentrations of TCE and t-1,2-DCE (3 and 2 ug/L, respectively) were detected in well M-2; according to Emcon, "the concentration of TCE in Well M-2 is below the DHS action level, and no action level has been established for t-1,2-DCE." According to Emcon, VOCs "were not detected in down-gradient wells M-1 and M-2", located at the northern side of the property near Central Expressway.

The environmental screening levels (ESL) for TCE in commercial areas are 1,500 ug/L for clays/silts and 110 ug/L for sands. The soils underlying the property are noted to consist of clay and silt materials. Based on the ESL of 1,500 ug/L and the maximum concentration of 110 ug/L at monitoring well M-4 located between the property and source of TCE, ATC concludes that a VEC is not a concern to the property.

8.0 INTERVIEWS

The following persons were interviewed to obtain information regarding *recognized environmental conditions* in connection with the property:

| INTERVIEW SUMMARY | | | | |
|-------------------|---------------|-------------------------------------|----------------------------|----------------|
| Role | Name | Title/Company | Years Assoc. With Property | Interview Type |
| Site Contact | Dante Sanchez | Building Engineer / Hitachi Vantara | Less than one year | In person |

Not included in this list are those governmental employees that were contacted solely for the purpose of retrieving public information pertaining to the property and who would not be expected to have firsthand knowledge of recognized environmental conditions at the property.

Pertinent information from the interviews is discussed in applicable sections of this report with details (including failed attempts to interview) documented on Record of Communication forms in Appendix J.

9.0 OTHER ENVIRONMENTAL CONDITIONS

9.1 Asbestos-Containing Materials (ACM)

Based on the scope of work for this ESA, sampling and analyses for ACM was not conducted. All suspect ACM should be properly assessed prior to disturbance from construction or maintenance activities. Observed building materials and finishes were noted to be in good condition at the time of the site visit.

9.2 Radon

Radon is a naturally occurring colorless, odorless gas that is a by-product of the decay of radioactive materials potentially present in bedrock and soil. The EPA guidance action level for annual residential exposure to radon is 4.0 picoCuries per liter of air (pCi/L). The guidance action level is not a regulatory requirement for private owners of commercial real estate, but is commonly used for comparison purposes to suggest whether further action at a building may be prudent.

ATC's review of published radon data indicates that the property is located in an area of moderate propensity with regard to the potential for elevated levels of radon gas. Santa Clara County is listed as being within Zone 2, where average indoor levels are expected to be between 2 and 4 pCi/L. Given the available statistics and the light industrial usage of the property improvements, radon is not considered to represent a concern, and no additional investigations are recommended at this time.

9.3 Lead in Drinking Water

ATC confirmed with the San Clara Valley Water District that the municipally-supplied water meets all drinking water standards, including those for lead. Lead in drinking water testing was not conducted for this Phase I ESA.

A copy of the most recent water quality report is included in Appendix L.

9.4 Lead-Based Paint (LBP)

Based on the commercial/light industrial usage of the property (as well as the construction date), LBP was not addressed for this Phase I ESA and no additional investigation is recommended at this time.

9.5 Mold Screening

ATC conducted a screening survey for readily observable mold and conditions conducive to mold on the property. The screening consisted of limited interview, document review (if such documents were available and provided to ATC) and physical observation.

Mr. Gyan Rusconi-Rodrigues spoke with Mr. Dante Sanchez with Hitachi Vantara regarding potential mold conditions at the property. Mr. Sanchez was aware of any mold documentation, observable mold, or notable areas of water intrusion. ATC requested documentation regarding current or historic mold conditions at the property. No documentation was provided to ATC for review.

During the site reconnaissance, ATC conducted a physical observation of certain HVAC system areas and other representative building areas as described in Section 2.2. No significant evidence of water intrusion or observable mold growth was observed at the time of the property reconnaissance. Mold is outside the scope of ASTM-05 and therefore, the presence/potential presence of mold is not considered to represent a *recognized environmental condition*.

9.6 Additional User Requested Conditions

PHASE I ENVIRONMENTAL SITE ASSESSMENT
Digital Realty Trust, Inc.
2825 and 2845 Lafayette Street
Santa Clara, California

No additional User requested services were included in the scope of work for this ESA.

11.0 TERMINOLOGY

The following provides definitions and descriptions of certain terms that may be used in this report. Italics indicate terms that are defined by ASTM Standard Practice E1527-13. The Standard Practice should be referenced for further detail (such as the precise wording), related definitions or additional explanation regarding the meaning of terms.

recognized environmental condition(s) (REC) - the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

material threat - a physically observable or obvious threat which is reasonably likely to lead to a release that, in the opinion of the environmental professional (EP), is threatening and might result in impact to public health or the environment. An example might include an aboveground storage tank system that contains a hazardous substance and which shows evidence of damage such that it may cause or contribute to tank integrity failure with a release of contents to the environment.

de minimis condition – is a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of the appropriate governmental agencies. An example might include a release of *hazardous substances* or *petroleum products* that could reasonably and foreseeably result in a concentration exceeding the applicable regulatory agency risk-based residential standards or substantial damage to natural resources. The risk of that exposure or damage would represent a threat to human health or the environment. If an enforcement action would be less likely than not, then the condition is considered to be generally not likely the subject of an enforcement action. A condition determined to be *de minimis* is not a *REC* or *controlled recognized environmental condition (CREC)*.

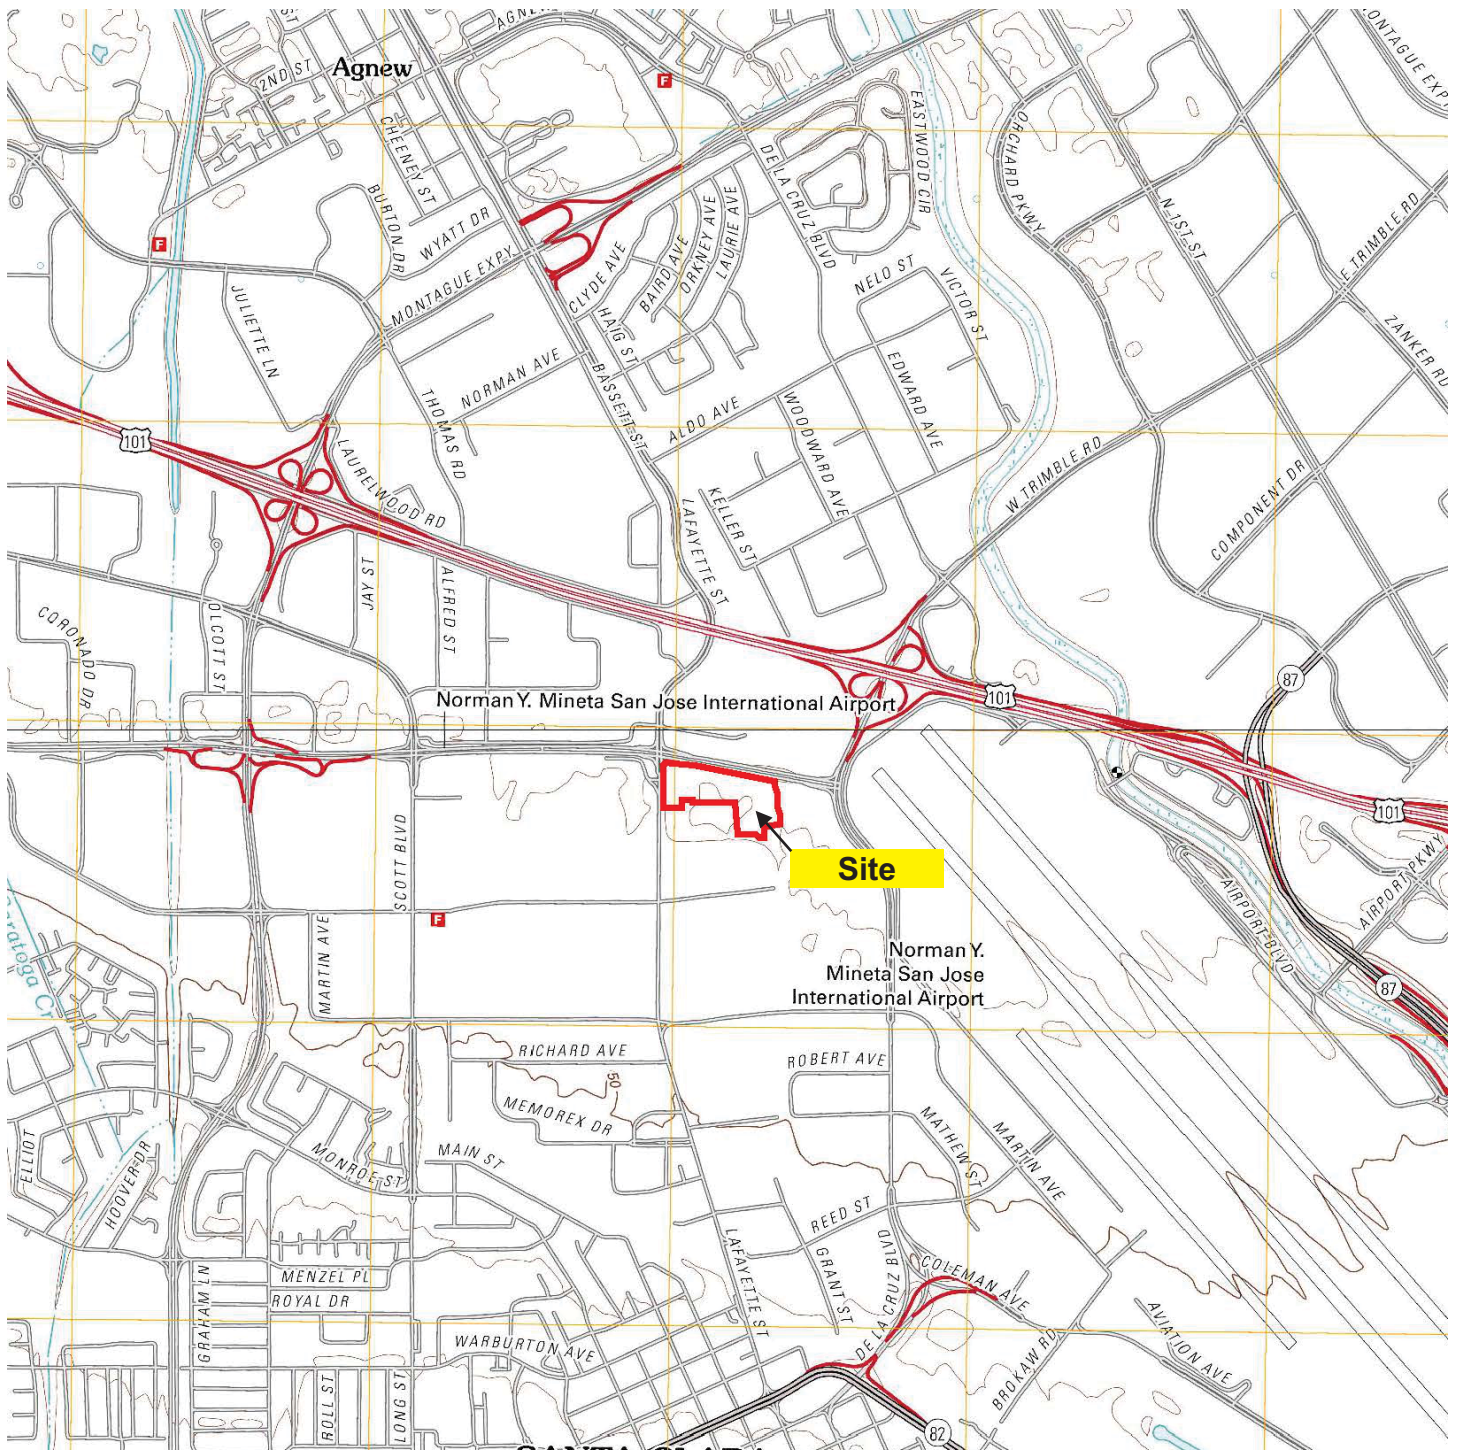

historical recognized environmental condition(s) (HREC) - a past release of any *hazardous substances* or *petroleum products* that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a *HREC*, the EP must determine whether the past release is a *REC* at the time the assessment is conducted (for example, if there has been a change in the regulatory criteria). If the EP considers the past release to be a *REC* at the time the Phase I ESA is conducted, the condition will be reported in Section 1.2 the Findings and Conclusions Summary table as a *REC*.

controlled recognized environmental condition (CREC) - a *recognized environmental condition* resulting from a past release of *hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitation, institutional controls, or engineering controls). Per E1527-13, a *CREC* will be reported in the Section 1.2 Findings and Conclusions Summary table as a *CREC* and a *REC*.

migrate/migration - refers to the movement of *hazardous substances* or *petroleum products* in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

2845 LAFAYETTE STREET
SANTA CLARA, CA 95050

COORDINATES

Latitude (North): 37.3730580 - 37° 22' 23.00"
Longitude (West): 121.9477140 - 121° 56' 51.77"
Universal Transverse Mercator: Zone 10
UTM X (Meters): 593172.6
UTM Y (Meters): 4136573.5
Elevation: 43 ft. above sea level

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 01/09/2018 has revealed that there are 10 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/11/2017 has revealed that there are 8 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are 10 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are 20 RCRA-SQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

State- and tribal - equivalent NPL

CA RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the CA RESPONSE list, as provided by EDR, has revealed that there are 2 CA RESPONSE sites within approximately 1 mile of the target property.

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 01/30/2018 has revealed that there are 73 CA ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

CA LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA LUST list, as provided by EDR, has revealed that there are 49 CA LUST sites within approximately 0.5 miles of the target property.

CA SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA SLIC list, as provided by EDR, has revealed that there are 16 CA SLIC sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, has revealed that there are 4 CA UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/11/2017 has revealed that there are 9 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

CA CUPA Listings: A listing of sites included in the county's Certified Unified Program Agency database. California's Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CA CUPA Listings list, as provided by EDR, has revealed that there are 24 CA CUPA Listings sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

CA DRYCLEANERS: A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaners' agents; linen supply; coin-operated laundries and cleaning; drycleaning plants except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.

A review of the CA DRYCLEANERS list, as provided by EDR, and dated 12/01/2017 has revealed that there is 1 CA DRYCLEANERS site within approximately 0.25 miles of the target property.

NY MANIFEST: Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.

A review of the NY MANIFEST list, as provided by EDR, and dated 12/31/2017 has revealed that there is 1 NY MANIFEST site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EPA ID: CAD982414989

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Completed Document Type: Removal Action Completion Report
Completed Date: 01/20/1983
Comments: In November 1981, the Department of Health Services (DHS), predecessor to the Department of Toxic Substances Control (DTSC), collected information after a routine Interim Status Document (ISD) inspection indicating that the plant was to be closed and demolished. Samples taken by DHS in August 1982 contained asbestos, with levels as high as 6% (plus or minus 4%). Cleanup of the site was required by DHS. The responsibility for site cleanup was placed upon Certainteed. Cleanup activities were overseen by DHS and included the removal of any asbestos fibers in the buildings and on the surface of the property, along with the removal of soil below the settling basin and

Background Info: Certainteed Corporation occupied this 26-acre site from 1962-1982 and manufactured asbestos-cement pipes, products storage, asbestos fiber storage and a settling basin for asbestos slurry. The asbestos fibers were collected using a vacuum system and stored in bags to be removed periodically. The slurry was collected by means of a drainage ditch which led to a settling basin. The previous owner of the property was Keasby and Mattison, also a manufacturer of asbestos pipe at the site from 1953-1962. Operations entailed the mixing of around 12% asbestos fiber with 60% concrete. Due to recycling of slurry, varying amounts of slurry and concrete were added to 12% asbestos. During the operation of Certainteed, the company gave permission for the storage of components from other companies (their origins unknown). Some of these components included transformers and conductors, both containing polychlorinated biphenyls (PCBs).

Baseline Flow: 0
Reclamation: Not reported
POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Annual Waste Handled:

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 34751.2

Waste code: D007
Waste name: CHROMIUM
Amount (Lbs): 35851.2

Waste code: F006

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
STATE MASTER

Registry ID: 110002829164

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 10/26/1992
Comments: The present level of contamination at the site poses a significant threat to public and environmental health. Therefore, PEA of high priority is recommended. The site consists of 25 acres of land. Both soil and groundwater were contaminated. Soil was contaminated by metals and solvents. Some of the metals were present in the on site soil are as follows: copper, lead, and nickel. The maximum level of 30 ppm of TCE was present in the groundwater and 100,000 ppm (see Note below) of cu was in the on site soil. Groundwater was contaminated by solvents including TCE. TCE levels in the groundwater was 30 ppm. Based on available information, there is a documented observe release at the site. The site poses a significant threat to public and environmental health. Therefore, PEA investigation is required. NOTE: Proposal for Final Cleanup Objectives, 1992 and Montn Technical Report on status compliance, CAMPSI Property, 1992

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: * Discovery
Completed Date: 09/24/1981
Comments: MONSANTO: Discovery. Facility identified from Superfund active site. On 11/25/81, facility drive-by. No evidence of waste visible. On 1/7/82 phone follow-up with plant manager. On 01/20/82, Inspection (state): ASP site inspection. On 03/31/82, Final strategy; identified abandoned site. On 11/01/82, Sample results: Mostly volatile organics in groundwater. On 01/20/87, Site screening done pending status due to RWQCB lead. Dump- site excavated 11/82. Source of Contamination currently being investigated by RWQCB. On 01/14/91, DHS received FIT SSI -EPA recommends NFA.

SLIC:

Region: STATE
Facility Status: **Open - Remediation**
Status Date: 04/30/2009
Global Id: T0608591651
Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)
Lead Agency Case Number: Not reported
Latitude: 37.370061
Longitude: -121.950472
Case Type: Cleanup Program Site
Case Worker: DT
Local Agency: Not reported
RB Case Number: 43S0496
File Location: Regional Board
Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: * Solvents, Trichloroethylene (TCE)
Site History: The Monsanto Company owned the site from about 1950-1983, the eastern portion of the property was developed and used by Monsanto for the manufacture of plastics and resins. Monsanto discharged liquid wastes on a portion of the property from the mid-1960s to 1975, and buried solid waste in seven trenches elsewhere on the property. Monsanto also maintained one or more above-ground tanks (removed in 1985) and an underground storage tank (UST), which was discovered in 1995. Volatile organic compounds (VOCs), fuel hydrocarbons, and other chemicals/wastes, including PCBs, have been found on the site. Monsanto commenced site investigations in 1981. The Regional Water Board adopted Site Cleanup Requirements (SCRs) in 1989 and ammended in 1991, and revised these in 1992. The site is currently regulated under SCR 92-106, and Waste Discharge Requirements (WDR) 90-160 for the reinfiltration of treated groundwater. SCR 92-106 was ammended in 1996 by SCR 96-140. Monsanto has undergone many property ownerships (in chronological order): Hunter Technology Corporation, CAMSI IV partnership, LafayetteHolding Corporation, Spieker Properties (May 16, 1995 - redeveloped to Lafayette Industrial Park), Equity Office Properties (June 2001) and RREEF America REIT II Corp. MMM (Summer 2004). A deed restriction is currently active on this property.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Environmental Interest/Information System

AIR EMISSIONS CLASSIFICATION UNKNOWN

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

STATE MASTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Evaluation Action Summary:

Evaluation date: 12/20/1994
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Generators - General
Date achieved compliance: 01/20/1995
Evaluation lead agency: State Contractor/Grantee

FINDS:

Registry ID: 110002646717

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Case Worker: DT
Local Agency: Not reported
RB Case Number: 43S0208
File Location: Regional Board
Potential Media Affected: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: 1,1,1-Trichloroethane (TCA), Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Gasoline
Site History: Owens Corning Fiberglass Co. operates a manufacturing facility for the production of thermal insulation, asphalt roofing rolls, and roofing shingles. The releases occurs as a result of a leaking UST. The dischrger was extracting groundwater from 1994 to 1999 and significantly decreased the onsite contaminants to asymptotic levels. The groundwater-CVOC levels originated from an upgradient off-property source.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

HAZARDOUS AIR POLLUTANT MAJOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Amount (Lbs): WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
30410

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

SANTA CLARA CITY -STORM WATER (Continued)

S106100703

Baseline Flow: 0
 Reclamation: No reclamation requirements associated with this facility.
 POTW: The facility is not a POTW.
 Treat To Water: Major Threat to Water Quality. A violation could render unusable a ground water or surface water resource used as a significant drink water supply, require closure of an area used for contact recreation, result in long-term deleterious effects on shell fish spawning or growth areas of aquatic resources, or directly expose the public to toxic substances.
 Complexity: Category A - Any major NPDES facility, any non-NPDES facility (particularly those with toxic wastes) that would be a major if discharge was made to surface or ground waters, or any Class I disposal site. Includes any small-volume complex facility (particularly those with toxicwastes) with numerous discharge points, leak detection systems or ground water monitoring wells.

Classification: Small Small Quantity Generator
Description: Handler: generates more than 100 and less than 1000 kg of hazardous waste during any calendar month and accumulates less than 6000 kg of hazardous waste at any time; or generates 100 kg or less of hazardous waste during any calendar month, and accumulates more than 1000 kg of hazardous waste at any time

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Global Id: SL18223621
Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)
Lead Agency Case Number: Not reported
Latitude: 37.369553
Longitude: -121.957932
Case Type: Cleanup Program Site
Case Worker: DT
Local Agency: Not reported
RB Case Number: 43S0127
File Location: Regional Board
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil Vapor
Potential Contaminants of Concern: Other Chlorinated Hydrocarbons, Benzene, * * METHYL ISOBUTYL KETONE, Xylene

Site History: Organic solvents were first detected in the soils and groundwater at the site in March 1983. The organic solvents were determined to be from underground storage tanks used to store methyl isobutyl ketone (MIBK), methyl ethyl ketone (MEK), toluene, xylene, petroleum naphtha, fish oil, alkyd resin, gasoline and diesel fuel. The tanks, which ranged in age from 14 to 29 years, were emptied after the soil and groundwater contamination was detected. The underground storage tanks and surrounding soil were removed during the summer of 1985 and nine low-flow groundwater extraction wells were installed in the underlying aquifer systems. Site investigation activities conducted since 1987 include the drilling of over 50 boreholes, installation of over 25 groundwater monitoring wells, and extensive site characterization and remedial activities. Groundwater remediation strategy included the installation of groundwater extraction wells and interception trenches. The interception trenches were installed to prevent chemical-bearing groundwater from leaving the site. The pump and treat cleanup activities from extraction wells and interception trenches were conducted from 1987 to 1998. More recently, the Responsible Party began a pilot study using in-situ chemical oxidation (ISCO) to clean up a groundwater-benzene plume in the B Zone. Although preliminary results indicated some success, the study is not yet complete. The Board adopted Order number R2-2002-0104 (on October 16, 2002. The new Order instituted MNA as the site groundwater remedial alternative. Annual groundwater monitoring reports are prepared and submitted to the Board

Completed Date: 02/04/2014
Comments: DTSC performed a site screening to determine whether any releases of hazardous substances or wastes have occurred at the site that require corrective actions. Subsurface investigations initiated in January 1983 revealed the presence of various industrial chemicals in soil and groundwater at the facility. A groundwater extraction and treatment system was installed and was effective in reducing volatile organic compound concentrations. The Regional Water Quality Control Board (RWQCB) approved monitored natural attenuation as the remedy for the Site in 2007. RWQCB has indicated they will issue a Site closure letter after receiving the plans and acceptable cold-weather test results for the Site s proposed vapor intrusion mitigation system. Based on the information gathered during the site screening and the results of the site investigations and evaluations, DTSC concluded that the site status should be Refer to RWQCB. RWQCB is currently overseeing Monitored Natural Attenuation at the Site.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

| Potential Media Affected: | Indoor Air, Soil Vapor |
| Potential Contaminants of Concern: | 1,1,1-Trichloroethane (TCA), Other Chlorinated Hydrocarbons, * * CIS-1,2-DICHLOROETHYLENE, Trichloroethylene (TCE) |
| Site History: | Bourns, Inc., has performed extensive remedial measures that have significantly reduced soil and groundwater contamination. One acid neutralization sump and two waste solvent storage tanks were removed from the site. A groundwater extraction and treatment system (GETS) was started in 1985 and was eventually expanded to include 15 operational groundwater extraction wells. Extracted groundwater was treated using two air strippers prior to discharge to the storm drain under a National Pollutant Discharge Elimination System permit. The cumulative mass of VOCs removed by the GETS since 1985 is approximately 540 pounds. The GETS was effective in reducing VOC concentrations in the A zone, containing the plume, and reducing its lateral extent and overall mass. The GWETS was shut down in March 2006 to allow for evaluation of monitored natural attenuation. Groundwater-VOC levels have decreased to low multiples of the MCL and |

Land type: Facility is not located on Indian land. Additional information is not known.
Classification: TSDF
Description: Handler is engaged in the treatment, storage or disposal of hazardous waste

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

AIR EMISSIONS CLASSIFICATION UNKNOWN

COMPLIANCE AND EMISSIONS REPORTING

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Case Worker: Not reported
RB Case Number: 11-035
Local Agency: Not reported
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: 06S1W34G01f
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History: 1986 In May, 2 monitoring wells (MW1 and MW2; also known as WW1 and WW2)) were installed onsite to depths of 25-28 feet. Groundwater was initially encountered between 13 and 14 feet below the ground surface (ft bgs). It is stated in the report that soil samples were submitted and that the laboratory reports would be forwarded when received. There is no record of the soil analytical for this investigation in the file. 1988 In March, a gasoline underground storage tank (UST) was removed from the site. 2 soil samples were collected from 9 ft bgs under the UST and was reported to contain up to 2,400 parts per million (ppm) Total Petroleum Hydrocarbons as Gasoline (TPHg). Groundwater was encountered in the excavation and a grab sample was collected. The grab groundwater sample was reported to contain 62,000 parts per billion (ppb) TPHg, 8,400 ppb Benzene, 9,900 ppb Toluene, and 9,800 ppb Ethylbenzene and Xylenes (quantified together). It is reported that approximately 60 cubic yards of soil were removed from the site at this time. 1991 In July, 1 monitoring well (MW3 aka WW3) was installed downgradient of the former UST. 3 soil samples were collected and were not reported to have concentrations of TPHg, and Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX) above the laboratory reporting limits. The 3 wells were sampled and reported to contain maximum concentrations of 6,700 ppb TPHg, 590 ppb Benzene, 760 ppb Toluene, 430 ppb Ethylbenzene, and 1,700 ppb Xylenes in well MW2. 1995 In April, periodic sampling of the groundwater wells commenced. 1996 In September, analysis of groundwater for Methyl tert-Butyl Ether (MtBE) was included in the periodic monitoring. MtBE was not reported to be present above the laboratory reporting limits, however, it is reported to be present in subsequent sampling events. 2004 In August, 1 gasoline UST was removed along with the dispenser and piping. 1 soil sample was collected from 8 ft bgs at the soil-groundwater interface and 1 from 3.5 ft bgs beneath the dispenser. Neither sample was reported to have concentrations of TPHg, BTEX or fuel oxygenates above the laboratory reporting limits.

A grab groundwater sample (GW1) was collected from the excavation and reported to have 7,600 ppb MtBE and 21 ppb Tert Amyl Methyl Ether (TAME). TPHg and BTEX were not reported to be present above the laboratory reporting limits. 2005 In March, 4 soil borings (SB1 through SB4) were advanced for the collection of grab groundwater samples. The grab groundwater samples were reported to have maximum concentrations of 160 ppb TPHg, 1.3 ppb Xylenes, 150 ppb MtBE and 0.53 ppb 1,2-Dichloroethane (DCA). In April, 2 monitoring wells (WW4 and WW5) were installed onsite. WW4 was installed near the recent UST pit. The new wells were added to the groundwater monitoring program. 2006 In February, 5 borings (SB5 through SB9) were advanced on and offsite. 11 depth discrete grab groundwater samples were collected and reported to contain maximum concentrations of 51 ppb TPHg, 0.5 ppb Benzene, and 23 ppb MtBE. The maximum MtBE and TPHg concentrations were reported in the sample collected between 18-22.5 ft bgs in boring SB5, which was located within the most recently removed UST excavation. In September, 4 monitoring wells (WW6 through WW9) were installed onsite. Wells WW8 and WW9 are screened deeper than the other wells onsite. Soil samples were not submitted for chemical analysis. These wells were incorporated into the groundwater monitoring program. 2007 In January, approximately 4,262 gallons of 5 percent RegenOx and ORC Advanced solution was injected in and around the 2 former UST excavations and in the downgradient portion of the plume. In the Corrective Action Plan (CAP), it was noted that groundwater beneath the site is under confined conditions. 2008 In May, approximately 1,955 gallons of RegenOx solution was injected in and around the 2 former UST excavations.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Potential Media Affected: Under Investigation
 Potential Contaminants of Concern: Trichloroethylene (TCE)
 Site History: The Regional Water Boards determination that the subject site is not a case is based on the following reasons: 1. very low concentrations of TCE were detected in the soil samples 2. the lack of a known onsite source for TCE detected in the soil and groundwater samples 3. Concentrations of TCE in groundwater are below the vapor intrusion

Potential Media Affect: Soil
Potential Contaminants of Concern: Diesel
Site History: The AT&T facility is located in a mixed commercial and industrial area in Santa Clara, California. A two-story building that houses offices and telephone switching equipment occupies the central portion of the site. North of the building, adjacent to the walkway

MAP FINDINGS

AT&T MOBILITY (Continued)

S101542336

leading to the main entrance was a former 1,000-gallon underground storage tank (UST) and three aboveground storage tanks (ASTs) that contained diesel fuel for a standby generator. AT&T is in the process of vacating the facility and no longer requires a standby generator at this facility. 2010 Tank Removal Activities November: Prior to the start of tank removal activities, AT&T arranged for the removal of the bulk of diesel fuel within the tank systems to be removed by AT&T's fuel supply vendor. Philips West Industrial Services transported 1,500 gallon of diesel fuel to Evergreen Oil recycling facility in Newark, California. Paradiso Mechanical, Inc. (Paradiso) began excavation activities of the fill material surrounding the UST and around the associated piping. The removed fill material was placed on polyethylene sheeting and stockpiled adjacent to the UST excavation pending removal. The interiors of the UST, ASTs, and day tanks were triple-rinsed by PSC Environmental Services (PSC) personnel using a fresh water/detergent mixture and a hot water pressure washer in order to remove any residual diesel fuel. The rinsate was removed from the tanks by a PSC vacuum truck, with the interior of the tanks then inspected to ensure all sludge and liquids had been removed. Following completion of rinsing activities, the rinsate and fuel was transported for disposal under manifest number 007751519 JJK to Evergreen Oil, Inc., in Newark, California. Paradiso personnel added approximately 75 lbs. of dry ice to the UST interior to inert its atmosphere. After approximately 1 hour, the lower explosion limit (LEL) and percent oxygen were measured at below 10%, with Ms. Giang Tran with the SCFD granting permission to remove the UST. After removal, both the UST and AST were inspected for signs of deterioration, holes, or leakage with none noted. However, discolored soils and a petroleum hydrocarbon odor were noted in the sidewalls of the UST excavation. Approximately 3 inches of water with a slight sheen was also present in the excavation. At the base of the tank excavation was a concrete slab, at a depth of 10 feet below surface grade (bsg). Under the direction of Ms. Giang Tran with the SCFD, Shaw personnel collected one soil sample, labeled TP-1, from along the sidewall of the excavation at the soil-water interface. Due to the small volume present, a water sample was not collected. The soil sample was collected by pushing a brass sample tube into soils collected by the bucket of the backhoe. An additional soil sample, labeled PL-1, was also collected from the former pipeline trench at a depth of 4 feet below surface grade (bsg), two feet below the base of the trench. In order to evaluate fill material reuse and disposal options, Shaw personnel collected one four-point composite sample, labeled CS 1-4, by pushing brass sample tubes into the stockpile soil. The soil samples were submitted to McCampbell Analytical, Inc. (McCampbell) in Pittsburg, California for analysis for total petroleum hydrocarbons as diesel (TPH-D) via EPA Method 8015, and for benzene, toluene, ethylbenzene, and xylenes (BTEX) constituents via EPA Method 8260B. The samples were further analyzed for the fuel oxygenates tert-amyl methyl ether (TAME), tert-butyl alcohol (TBA), diisopropyl ether (DIPE), ethyl tert-butyl ether (ETBE), and methyl tert butyl ether (MTBE) via EPA Method 8260B. Results of the analysis reported TPH-D in the tank excavation sample TP-1 and pipeline sample PL-1 at concentrations of 2,200 milligrams per kilogram (mg/kg) and 3.3 mg/kg, respectively. TPH-D was also reported in the composite stockpile sample CS 1-4 at a concentration of 86 mg/kg. No other analytes were detected in any of the samples. Soil sample analytical results are presented in Attachment 3. No BTEX constituents or fuel

MAP FINDINGS

AT&T MOBILITY (Continued)

S101542336

oxygenates were reported in the analysis of any of the samples. Soil discoloration and a petroleum hydrocarbon odor were noted in the excavation sidewall. Approximately 3 inches of water with a slight sheen was also noted in the excavation. On November 23, 2010, the two tanks (1,000-gallon UST and the 2,000-gallon AST) were transported by PSC to Ecology Control Industries (ECI) facility in Richmond, California, for disposal under hazardous waste manifest 002135778 JJK. The removed piping and the 25-gallon and 50-gallon day tanks that had been placed into the 20-cubic yard bin was transported by PSC to ECI's facility for disposal under hazardous waste manifest 000011727 DAT. Following completion of tank removal and sampling activities, the excavation was temporarily backfilled with stockpiled fill material to prevent collapse of the sidewalls and potentially undermining the adjacent AT&T building. Due to the presence of impacted soils reported within the UST excavation, Shaw and AT&T planned to remove the backfilled material, over-excavate accessible hydrocarbon-impacted soils, and transport removed fill and soils to an appropriate offsite disposal facility. 2011 Soil Over-Excavation and Dewatering Activities In February, 2011, Paradiso Mechanical, Inc. (Paradiso) installed sheet-pile shoring around the former excavation in order to ensure the integrity of the adjacent building was not compromised during over-excavation activities. Paradiso then removed the fill material down to approximately 13 feet bsg, which was the original depth of the former USTs excavation. Following removal of the fill material, Paradiso widened the excavation to the extent of the sheet-pile shoring (15 feet by 20 feet), and deepened the excavation to 15 feet bsg, with ground water encountered at a depth of approximately 13 feet bsg. Approximately 165 cubic yards (213 tons) were excavated and transported for disposal by Intrinsic Transportation, Inc., (Intrinsic) to Ox Mountain Landfill in Half Moon Bay, California. The excavation was dewatered by PSC Environmental Services (PSC) using a vacuum truck. Prior to purging, a moderate sheen was noted on the groundwater. A total of 5,000 gallons of groundwater were removed from the excavation and transported off-site for disposal. In March 2011, Shaw collected a sample, labeled GW-1, of the ground water within the excavation. The sample was analyzed for TPH-D, benzene, toluene, ethylbenzene, and xylenes (BTEX), and five fuels oxygenates tert-amyl methyl ether (TAME), t-butyl alcohol (TBA), diisopropyl ether (DIPE), ethyl tert-butyl ether (ETBE), and methyl tert-butyl ether (MTBE). Results of the sample analysis reported TPH-D and MTBE at concentrations of 18,000 micrograms per liter (ug/L) and 0.70 ug/L, respectively. No BTEX constituents or fuel oxygenates were reported in the analysis. The excavation was dewatered again by PSC, with an additional 4,500 gallons of groundwater removed. Before purging began, a slight sheen was noted on the groundwater. On March 8, 2011, after allowing the excavation to recharge overnight, Shaw collected two confirmation groundwater samples, labeled GW-2 and GW-2-F, from the excavation using disposable bailers as before. The samples were analyzed for TPH-D only under EPA Method 8015B, and sample GW-2-F was filtered and then analyzed for TPH-D to determine if sediment within the groundwater was impacting sample results. Results of the analysis reported TPH-D in both samples GW-2 and GW-2-F at a concentration of 150 ug/L. The fuel oxygenate MTBE was also reported in sample GW-2-F at 0.57 ug/L. 2013 In March 2013, a fifth round of groundwater sampling was conducted. Water level elevations ranged from 43.61 feet above msl in well MW-2 to 40.79 feet above msl in well MW-3. The

MAP FINDINGS

AT&T MOBILITY (Continued)

S101542336

direction of the groundwater gradient was to the southwest at approximately 0.10 ft/ft. Results of the groundwater sample analysis reported TPH-D in all five wells ranging from 230 ug/L in MW-4 and MW-5, to 580 ug/L in MW-1. Concentrations of all other constituents (TPH-G, BTEX, five fuel oxygenates, and lead scavengers) were reported below the laboratory detection limits in all five monitoring wells. Based upon previous groundwater sampling results, Shaw and AT&T believed the TPH-D results to be anomalous and not reflective of groundwater conditions. As a result, Shaw mobilized to the site on May 2, 2013 to resample all five monitoring wells for TPH-D. Laboratory analytical results for the May 2, 2013 sampling reported TPH-D below laboratory detection limits in MW-2, MW-3, MW-4, and MW-5. TPH-D was reported in MW-1 at a concentration of 43 ug/L. In June 2013, a sixth round of groundwater sampling was conducted. Water level elevations in wells ranged from 40.60 feet above msl in well MW-1 to 43.64 feet above msl in well MW-2. The direction of the groundwater gradient was to the southwest at approximately 0.10 ft/ft. Results of the groundwater sample analysis reported concentrations of all constituents (TPH-G, TPH-D, BTEX, five fuel oxygenates, and lead scavengers) were reported below the laboratory detection limits in all five monitoring wells. Additional Site Assessment In September 2013, four direct-push borings were advanced by National Exploration of Woodland, California, a C- 57 licensed driller. Each boring was initiated by hand-digging the first few feet of each location to clearly unmarked utilities. The boring were then cored continuously using a 48-inch-long core direct-push sampler lined with clear, Lexan sample tubes. The soil cores were used for lithologic evaluation and field screening of organic vapors. Headspace screening for organic vapors was accomplished using a photo ionization detector (PID). Two samples were collected from each boring, with one sample from the 0- to 5-foot depth interval and another sample from the 5- to 10-foot depth interval. Sample locations were determined by visual observation and PID readings. If groundwater was encountered, a sample from the capillary fringe was collected. The soil samples were submitted to Pace Analytical in Minneapolis, Minnesota, an ELAP certified laboratory for analysis for TPH-D under EPA Method 8015 (modified), and for BTEX constituents and naphthalene by EPA Method 82608. Laboratory analytical data reported TPH-D, BTEX, and naphthalene concentrations were below laboratory detection limits in all samples with the exception of TPH-D in sample SB-6-7 which was reported at 16.7 mg/kg. The concentration of TPH-D in SB-6 is below the San Francisco RWQCB's Environmental Screening Level for Residential Properties (shallow soils, 3 meters, groundwater is a potential drinking water source of drinking water). In August 2013, Shaw reviewed regulatory and database records to assess for sensitive receptors. The following are the key findings: DWR records indicate that well installation records for 950 wells have been submitted within 2,000 feet of the subject site in the Santa Clara area. Most of the wells were reported as geologic test wells or groundwater monitoring wells and are not considered sensitive receptors. Two of the reported well records were not identified as test or traditional monitoring wells. Based on their intended use and approximate distance from the AT&T facility, these two wells are not considered potential sensitive receptors to the subject site. Approximately 10 additional well records were provided which did not identify a concise location in relation to the subject site. The Guadalupe River and Saratoga Creek are the closest surface

water bodies to the subject site, located approximately 1.2 miles northeast and 0.85 miles west of the site. Based on the depth of the contaminants of concern and utilities, and the paving which covers the property, it is unlikely that site-related contamination (if any) is entering site surface water pathways. Most recent ground water sampling at the subject site did not indicate any contaminants of concern in site monitoring wells. The City of Santa Clara Water Utility supplies drinking water to Santa Clara. Water in the vicinity of the subject site is obtained primarily from water wells. However, the City also imports a portion of the water supply from the San Francisco Hetch Hetchy system and from SCVWD. Drinking water received from this system as a whole is tested on a regular basis, per USEPA and California standards. Two of the reported well records within 2,000 feet of the subject site were not identified as test or traditional monitoring wells. Based on their intended use and approximate distance from the AT&T facility, these two wells are not considered potential sensitive receptors to the subject site. The impacted area on the subject site is paved with asphalt and concrete, which should preclude any human contact with petroleum-impacted ground water that has been reported at depths ranging from approximately five to six and a half feet bsg. It is very unlikely for workers to come in contact with impacted groundwater during subgrade construction activities. No sensitive receptors were identified during the execution of the SRS.

File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: 06S1W34G03f
Potential Media Affect: Soil
Potential Contaminants of Concern: Waste Oil / Motor / Hydraulic / Lubricating
Site History: 4/93 - 280-gal. waste oil UST removed from the site. Soil sample from 9.5 ft bgs 153.3 ppm TOG. 6/93 - overexcavation of tank pit conducted. 4 soil samples were collected from the sidewalls and 1 from the bottom of the excavation and were non-detect for TOG. The maximum depth of the overexcavation was 9-9.5 ft bgs. Adjacent fuel leak investigation case T&D Tile (1180 Walsh Ave.) has reported shallow groundwater at approximately 7 ft bgs. 6/00 - investigation of possible impact to groundwater requested, but not responded to. Also no analysis for MtBE.

Case Worker: Not reported
RB Case Number: 21-088
Local Agency: Not reported
File Location: All Files are on GeoTracker or in the Local Agency Database
Local Case Number: 06S1W35K06f
Potential Media Affect: Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern: MTBE / TBA / Other Fuel Oxygenates, Gasoline
Site History: 1992 In September, a waste oil underground storage tank was removed and a fuel leak investigation case was opened (06S1W35K05f) and the case closed on 9/20/96. 1997 In September, it is reported that a soil gas survey was conducted prior to a property transaction. The report of this work was not found in the file. The information presented here is from summaries contained in later reports. Maximum concentrations of 6,100 parts per billion by volume (ppbv) total purgeable petroleum hydrocarbons calculated as Gasoline (TPPH-g), 77 ppbv benzene, and 1,400 ppbv methyl tertiary butyl ether (MtBE) were detected. Locations of samples are not known. 1998 In December, 1 Geoprobe boring (EB1) was advanced onsite to 17 feet below the ground surface (ft bgs). 3 soil samples were collected and reported to contain maximum concentrations of 505 parts per million (ppm) Total Petroleum Hydrocarbons as Gasoline (TPHg), 0.0667 ppm benzene, 6.26 ppm Ethylbenzene, 2.56 ppm Xylenes, and 3.44 ppm MtBE. A grab groundwater sample was collected and reported to contain 17,000 parts per billion (ppb) TPHg, 74 ppb benzene, 197 ppb Toluene, 56.1 ppb Ethylbenzene, 2,130 ppb Xylenes, and 3,830 ppb MtBE. Product dispensers and piping were replaced. 4 soil samples (D1 through D4)

S104541842

were collected from beneath the dispensers between 2-2.5 ft bgs and 3 soil samples (P1 through P3) were collected along the piping at 2.5-3 ft bgs. The maximum concentrations reported for the piping samples was 12.2 ppm TPHg, 0.199 ppm Benzene, 0.045 ppm Toluene, 0.784 ppm Ethylbenzene, 0.194 ppm Xylenes, 2.75 ppm MtBE, and 18.7 ppm Total Lead. The maximum concentrations for the dispenser samples were 339 ppm TPHg, 1.99 ppm Benzene, 1.81 ppm Toluene, 5.16 ppm Ethylbenzene, 13.8 ppm Xylenes, 84.6 ppm MtBE, and 20 ppm Total Lead. Additional excavation was conducted in the area of sample D1 to a depth of 6 ft bgs. Sample D1B was collected at 6 ft bgs and reported to contain 16.1 ppm TPHg, 0.013 ppm Benzene, 0.011 ppm Toluene, 0.17 ppm Ethylbenzene, 0.041 ppm Xylenes, and 1.89 ppm MtBE. 1999 In June, 3 groundwater monitoring wells (MW-1 through MW-3) were advanced to 15 ft bgs. 7 soil samples were collected and reported to have maximum concentrations of 1,300 ppm TPHg, 0.063 ppm Benzene, 2.5 ppm Toluene, 29 ppm Ethylbenzene, 130 ppm Xylenes, and 0.12 ppm MtBE. Periodic groundwater sampling began at the site. 2000 In March, a batch extraction test was conducted on a tank complex vadose monitoring well TB1. Reportedly, there are 3 tank complex vadose monitoring wells installed within the tank pit (TB1 through TB3). Approximately 50 gallons of groundwater were removed and the well was dewatered. Drawdown was not recorded in nearby wells. Another test was conducted on well MW1, which dewatered immediately and did not produce a significant volume of water. In August, 4 groundwater monitoring wells (MW-4 through MW-7) were installed on and offsite to approximately 15 ft bgs. Soil samples were not collected and submitted for laboratory analysis during this investigation. The new wells were incorporated into the monitoring program. 2001 In September, 5 Geoprobe borings (B1 through B5) were advanced onsite to 30 ft bgs as part of a transect study. 24 soil samples were collected and reported to have non-detectable to low concentrations of the Constituents of Concern (COCs). 15 depth discrete grab groundwater samples were collected. TPHg, Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX) were not reported to be present in any of the samples above the laboratory reporting limits. The maximum concentration of 45,000 ppb MtBE was reported for the sample collected from 11 ft bgs in boring B4. Deeper samples collected from this boring decreased to 3,500 ppb MtBE. 2002 In January and February, 8 Geoprobe borings (B6 through B13) were advanced offsite to depths ranging from 31 to 42 fbg as part of a transect study. 23 soil samples were collected and reported to have non-detectable to very low concentrations of COCs. 21 depth discrete grab groundwater samples were collected and reported to have maximum concentrations of 230 ppb TPHg, 1 ppb Benzene, 0.99 ppb Toluene, 1.2 ppb Ethylbenzene, 8.7 ppb Xylenes, and 840 ppb MtBE. The transect study concluded that dissolved TPPH-g (sic) and benzene impact downgradient of the site do not appear to warrant further investigation or remediation. And that the detected concentration of 840 ppb MtBE in the location of boring B-8, approximately 250 to the north of the site, is generally consistent with historical analytical data for existing monitoring well MW-7. And that the Dissolved MtBE impact approximately 500 feet north-northwest of the site attenuates to a concentration of 23 ppb, as quantified by analytical data for boring B-10, sampled during this investigation. In April, 3 shallow extraction wells (EW1, EW3 and EW4) to 25 ft bgs and 1 deeper extraction well (EW2) to 35 ft bgs were installed onsite. 10 soil samples were collected and reported to have non-detectable to low concentrations of COCs. The new wells were

S104541842

incorporated into the monitoring program. Wells EW2 and EW3 were installed adjacent to each other and based on the gauging data, there is an upward vertical hydraulic gradient from the deeper water-bearing zone toward the shallow water-bearing zone. In October, groundwater extraction from EW-1 and EW-3 commenced and continued through September 2004. Groundwater was extracted and stored in an onsite holding tank and hauled offsite. As of June 24, 2004, approximately 425,650 gallons of groundwater had been extracted, and approximately 4.0 pounds of TPH-g and 4.5 pounds of MTBE had been removed. 2003 In July, 2 groundwater monitoring wells (MW8 and MW9) were installed offsite to 17 ft bgs. 6 soil samples were collected and were not reported to have concentrations of the COCs above the laboratory reporting limits. The new wells were incorporated into the monitoring program. An underground conduit survey was conducted and concluded that a 78-inch storm drain beneath De La Cruz Boulevard and the telecommunication conduit beneath Martin Avenue were in contact with groundwater. Based on proximity, size, and local groundwater flow direction, the conduit likely to have the greatest influence for acting as a preferential pathway for the migration of hydrocarbon-impacted groundwater is the 78-inch storm drain that underlies De La Cruz Boulevard. Shaw also notes that the 33-inch storm drain and 24-inch sanitary sewer lines underlying De La Cruz Boulevard and the 12-inch sanitary sewer line and the 33-inch storm drain underlying Martin Avenue, may have been in contact with groundwater previously, based on historical depth to groundwater data. 2004 In August, 10 ozone sparge wells (C1 through C10) were installed between 18 and 22 ft bgs onsite. The ozone sparge system began operations in October and ran through May 2008. 2007 In September, 2 hydraulic hoists and 1 clarifier were removed from the site. 1 soil sample was collected from each hoist between 9.7 and 9.9 ft bgs and were reported to have maximum concentrations of 6.1 ppm TPH as Diesel (TPHd), and 53 ppm Hydraulic Oil. 3 soil samples were collected in association with the clarifier and piping; the depths of these samples were not reported. Maximum concentrations of 360 ppm TPHd, 2,300 ppm Hydraulic Oil and 110 ppm Total Oil and Grease (TOG) were reported for sample PIPE-2. Soil was excavated in the area of this sample to remove impacted soil and sample PIPE-3 was collected from 10 ft bgs. PIPE-3 was reported to contain 8.68 ppm TOG, 33 ppm Chromium, 18 ppm Nickel, 50 ppm Lead, and 53 ppm Zinc. Approximately 47.7 tons of soil was removed from the site.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

 Latitude: 37.3640860439447
 Longitude: -121.944572925568
 Case Type: Cleanup Program Site
 Case Worker: DT
 Local Agency: Not reported
 RB Case Number: 43S0158
 File Location: Regional Board
 Potential Media Affected: Other Groundwater (uses other than drinking water), Soil
 Potential Contaminants of Concern: Other Metal
 Site History: From 1960 to 1981, the site was owned by Gillmore Supply Company who leased the property to Metal Coating Company/Galvanizers, Inc., who operated a galvanizing facility. Operations included the use of zinc-rich plating solutions and other acidic process solutions. Releases likely occurred through accidental spills of process solutions, leaks from process tanks and piping, onsite disposal of spent solutions, and onsite discharges of wastewater. Lombardo Diamond Core Drilling Company, Inc. (Lombardo) purchased the property in 1985. Lombardo currently uses the property for parking and storage

of vehicles, heavy equipment and supplies used in its concrete cutting business. Starting in 1983, several investigations have been performed which have completely defined the extent of soil and groundwater contamination. Contamination has not migrated off site. Elevated levels of metals, primarily zinc, were found in the shallow soils near the former galvanizing building. Zinc had the highest concentrations. Volatile organic compounds were not identified. Elevated lead concentrations were found only in the top five feet of soil, while zinc concentrations were found deeper. Zinc concentrations were highest where the soils were more acidic (low pH values). Most of the zinc impact was 10-25 feet bgs, and was confined to the vicinity near the former galvanizing building. Shallow groundwater was also contaminated with zinc. The maximum concentrations of zinc in 1990 were 34,000 milligrams per kilogram (mg/kg) in the soil and 10,000 milligrams per liter (mg/l) in groundwater. The most recent maximum groundwater concentration in November 2005 was 2,600 mg/l. For comparison, the maximum contaminant level considered safe for drinking water is 5 mg/l.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Site Screening
 Completed Date: 04/08/1993
 Comments: The Lombardo site is approximately 2 acres in size and used for parking and storage of vehicles, heavy equipment and supplies by the company in its concrete cutting business. Lombardo has owned this property since April 1985. Historical information indicates that from the 1960's to the 1970's, metal coating company, a galvanizing facility operated onsite. Available information likewise indicates that metal coating may have discharged waste pickling and washing solution on-site, resulting to soil and ground- water contamination prior to Lombardo's purchase of the property in 1985. Sampling results in 1991 showed zinc in soil as high as 34,000 ppm; and 364 ppm in groundwater. The San Francisco Regional Water Quality Control

Case Type: Cleanup Program Site
Case Worker: Not reported
Local Agency: Not reported
RB Case Number: Not reported
File Location: All Files are on GeoTracker or in the Local Agency Database
Potential Media Affected: Soil
Potential Contaminants of Concern: Gasoline, Other Petroleum
Site History: Rental car facility at the airport ceased operations at this location. Possible sources of contamination are aboveground fuel storage tanks, car washes and likely oil-water separator. 6 soil samples were collected and only analyzed for Total Recoverable Petroleum Hydrocarbons and reported concentrations between 230 and 2,300 ppm.

Site History: Soil sampling done for facility closure of rental car facility with above ground storage fuel tank and car wash. Soil samples were only analyzed for Petroleum Oil and Grease by EPA Method No. 5520E/F and reported maximum concentrations of 700 ppm. Additional soil samples were collected in July and reported to have maximum concentrations of 62 ppm TPHmo and 14 ppm TPHd. VOCs were not reported to be present in any of the soil samples.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 278

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A

CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 6290

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Amount (Lbs): 824.4

Waste code: D004
Waste name: ARSENIC
Amount (Lbs): 5390

Waste code: D008
Waste name: LEAD
Amount (Lbs): 9548.3

Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Phase 1 Addendum
Completed Date: 12/04/2013
Comments: DTSC performed a site screening to determine whether any releases of hazardous substances or wastes have occurred at the site that require corrective actions. Closure of the Fairchild Semiconductor Company's manufacturing facility that was previously on the site was done with oversight from the City of Santa Clara Fire Department. Confirmation soil sampling was conducted as part of the facility's closure. Digital Realty Trust, Inc. had a Phase I Environmental Site Assessment performed in connection with a real estate transaction. Sampling did not identify contamination in the site soils associated with former on-site operations. Based on the information gathered during the site screening and the results of the site investigations and evaluations, DTSC concluded that no further action is required at the site.

Background Info: Pittsburgh-Des Moines Steel (PDM) was a 31 acre steel fabrication plant from 1946-1976. Operations at the plant included welding, cutting, shot-peening and painting of steel girdes. The site was sold to Air Products and Chemicals, Inc. and in 1976 leased back. From 1976 to 1982 the fabrication plant was used as a steel warehouse. Air Products and Chemicals, Inc. had a spray-painting facility on site from 1976 to 1982. Prior to 1976, on site waste storage areas did not have secondary containment. Soil contamination occurred because of drums of lead-based paint that were spilled and leakage from an underground gasoline tank. Wastes on site included lead-based paints, metals left from steel fabrication, chemicals associated with petroleum and low levels of polychlorinated biphenyls (PCBs). PDM Steel uses the property as a service center (storage and distribution of materials).

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 1650.1

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

STATE MASTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Completed Info:

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Site Screening
 Completed Date: 02/26/1993
 Comments: Situated in a geologically confined zone of Santa Clara Valley this 2.5 acre site is underlain by an upper and a lower aquifers. Site soils and groundwater in the upper aquifer have been contaminated with various volatile organic compounds (VOC) principally trichloroethene (2.3ppm) trichloethane (0.14ppm), 1,2-dichloroethene (0.15), xylene (.07 ppm), freon-113 (.06 ppm) and acetone by the operations of the past operator. Fairchild Corp and the current operator micropower systems Inc. However, due to its poor quality, the upper aquifer is not a drinking water source. The lower aquifer with wide use as a source of drinking water has not been inspected due to a thick clay sequence and absence of interconnecting conduits withing two (2) miles of the site. Oversight of an ongoing groundwaer contamination, remediation and and review of a remedial action plan (rap) are underway by San Francisco Regional Water Quality Control Board (RWQCB).

Completed Date: 12/11/2015
Comments: California Environmental Management, the consultant to the owner of Pyramid Circuits, submitted an "Environmental Assessment for Closure" report to DTSC to provide the basis for changing the site status to no further action. The DTSC memorandum summarizes the information provided in this report and the reasons why DTSC determined that the site status should be changed to "No Further Action" on the Envirostor database.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Phase 1 Addendum
Completed Date: 12/11/2015
Comments: California Environmental Management, the consultant to the owner of Pyramid Circuits, submitted an "Environmental Assessment for Closure" report to DTSC to provide the basis for changing the site status to no further action. The report details the regulatory closure of the Pyramid Circuits facility under the oversight of the Santa Clara Fire Department (the Certified Unified Program Agency with jurisdiction), the cleanup and removal of minor copper contamination in soil, and the cyanide detections in soil and evaluation of the results. No releases at the site have been documented and hazardous materials usage occurred within a designated section of the building with containment. The cyanide detected in soil was at levels well below screening levels that are protective of human health.

discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 183.5

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 6233.7

Waste code: D007
Waste name: CHROMIUM
Amount (Lbs): 5500.2

Waste code: D008
Waste name: LEAD
Amount (Lbs): 990

Waste code: F006
Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Amount (Lbs): 22600

Comments: Not reported
Description: failure of ventilation system, vapor release which condensed into liquid and dried to particulate material; wind blown to adjacent businesses.

FINDS:

Registry ID: 110000484422

Environmental Interest/Information System
AIR EMISSIONS CLASSIFICATION UNKNOWN

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as

Comments: The Phase I Environmental Site Assessment was submitted to DTSC along with the Request for Agency Oversight of a Brownfield Site.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 04/06/2010
Comments: The report summarizes the closure activities at the site and documents the sampling and disposal activities performed in accordance with the Santa Clara Fire Department Hazardous Materials Closure permit.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 11/19/2010
Comments: The Addendum documents additional soil sampling in May and June 2010 to evaluate the horizontal extent of nickel and or copper impacted and the removal of concrete and soil in the Plating Room and DES Room. The Addendum includes (as Attachment 4) a risk assesment of the remaining soils with metal concentrations exceeding screening levels.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: No Further Action Letter
Completed Date: 03/15/2011
Comments: DTSC reviewed a risk assessment submitted on behalf of PS Business Parks and agreed with its conclusions and determined that no further action is needed to address the residual copper and nickel in soil.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site History: The Regional Water Board has been the regulatory oversight of the site since at least 1985 and the site is currently under site cleanup requirements (order) 96-038. The site was a magnetic tape manufacturing facility where volatile organic compounds (VOCs) including methyl ethyl ketone (MEK or 2-butanone), cyclohexanone, and petroleum hydrocarbons were released to the subsurface during historical operations. The discharger operated solvent storage, distribution, and recovery systems which include underground storage tanks (USTs) used to store methyl ethyl ketone, xylenes, cyclohexanone, isopropanol, acetate, and diesel. Memorex ceased all manufacturing activities at the site on November 16, 1993. Current owner is renting the property to industrial tenants. Site investigations began in 1982 and solvents (VOCs) were detected in soil and groundwater. A groundwater extraction system operated in 1983. In 1989, underground piping connect to solvent tanks failed and discharged to the subsurface. In 1990 and 1991, several USTs and associated piping were removed. Groundwater flow directions is towards the northeast and the depth to groundwater has ranged from approximately 6 to 8 feet below grade (fbg). No cyclohexanone or MEK are detected. Only acetone is detected and the maximum concentration in 2014 was 75.6 micrograms per liter (ug/L), which is below the Regional Water Board, SF Bay Region, environmental screening level (ESL) of 14,000 ug/L. No other VOCs are detected. A soil vapor extraction (SVE) system operated from 1996/1997 to December 14, 2015. Thirteen SVE wells were installed to approximately 7 fbg; however, not all SVE wells operated. In 2011, 3 sub-slab vapor samples (SV-1 through SV-3) were installed from beneath the former wet process area, and the reported concentrations of VOCs in the samples were below published environmental screening levels (ESLs) for commercial and industrial properties. In 2015, 6 additional sub-slab vapor probes were installed (SV-4, SV-5, and SV-7 through SV-10) to characterize soil vapor quality in the areas where existing SVE well vaults are obstructed. Sub-slab vapor probes and accessible SVE wells (V-1 through V-5 and V-12) were sampled in 2015 and 2016. The 6 sub-slab vapor probes were installed between June 16 and 18, 2015 and sampled two days after installation. Prior to sampling, the SVE system is shut down. The Regional Water Board approved a work plan for a soil vapor rebound assessment to evaluate the effectiveness of the SVE system in removing subsurface contaminants, the need for additional vapor intrusion monitoring, and whether the site is a

candidate for no further action and case closure. The last report received was the July 27, 2016, Soil Vapor Sampling and Rebound Assessment Report. No TCE has been detected. PCE concentrations do not exceed the commercial soil gas ESL, 2,100 ug/m3. The maximum PCE concentration in 2016 was 150 ug/m3. Other volatile organic compounds detected did not exceed commercial ESLs. On December 18, 2017, the Regional Water Board request a low-threat case closure request report. Not reported

Classification: Small Small Quantity Generator
Description: Handler: generates more than 100 and less than 1000 kg of hazardous waste during any calendar month and accumulates less than 6000 kg of hazardous waste at any time; or generates 100 kg or less of hazardous waste during any calendar month, and accumulates more than 1000 kg of hazardous waste at any time

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: Yes
Transporter of hazardous waste: Yes
Treater, storer or disposer of HW: Yes
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No

FINDS:

Registry ID: 110000886701

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

tele- communications equipment manufacturer, became the first tenant of this fully fenced facility comprised of 3 buildings, with a total area of 78,870 sq. ft. Between 1980 and 1985, Varian relocated. Granger continued its operation until 1990 when Digital Switch Communication Corp. (DSC) bought them out. While information about Granger's process and waste management is not available, Varian used hydrochloric & nitric acid, caustic soda, & trichloroethane (TCE), and Granger used freon-113, butyl hethyl alcohol in their respective processes. Both have historically stored their waste at site for periodic transportation and disposal by specialty contractors. However, several accidental spillages have been recorded. Such spillages and probable leakage from a subsurface containment sump account for the detection of TCA, TCE, & PCE, along with various metals in soils groundwater at site. The site is underlain by two aquifers of which the lower is used for drinking water.

Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Phase 1 Addendum
Completed Date: 11/27/2013
Comments: DTSC performed a site screening to determine whether any releases have occurred at the site that require corrective actions. Based on information gathered during the site screening, it was found that Varian Associates performed investigation and cleanup with oversight by the Regional Water Quality Control Board (RWQCB), including remediating groundwater contaminated with 1,1,1-trichloroethane. Therefore DTSC recommended no further action is required and that the site status be identified as refer to RWQCB.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 875.7

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 21116.9

CSL OPERATING LLC (Continued)

1000298702

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Amount (Lbs): 38.4

Waste code: D007
Waste name: CHROMIUM
Amount (Lbs): 20591.1

Waste code: D011
Waste name: SILVER
Amount (Lbs): 959.1

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Amount (Lbs): 875.7

Waste code: F006
Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Amount (Lbs): 11600

Waste code: F009
Waste name: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS WHERE CYANIDES ARE USED IN THE PROCESS.

Amount (Lbs): 33.4

Environmental Interest/Information System

AIR EMISSIONS CLASSIFICATION UNKNOWN

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

STATE MASTER

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance

information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Description: Per NRC report: "A fire started in an outdoor cardboard storage box at an electronics and photographic waste recycling company, sending clouds of black smoke into the air. A shelter-in-place was issued for the surrounding area; the blaze was controlled by later afternoon. REMEDIAL ACTIONS: Santa Clara Fire Dept. responded, also firefighters from San Jose and Mountain View; blaze controlled by using up to 4, 000 gallons of water per minute; shelter-in-place issued using the "alertscc" system. ESTIMATED DURATION: "3 hour" ADDITIONAL INFORMATION: "EPA Reg 9 EOC learned of the release via news reports but has not received any reports from the NRC or Cal EMA on the incident".

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 1475

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

STATE MASTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 06/01/2009
Comments: Report was prepared prior to DTSC oversight of the project and is included as part of the Site record.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Characterization Report
Completed Date: 01/21/2011
Comments: Investigation indicated that soil and groundwater at the Site are impacted with elevated concentrations of TPH. Further investigation to determine the extent of the contamination is necessary.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Fieldwork
Completed Date: 10/22/2010
Comments: Field work to implement the Supplemental Site Investigation Work Plan was completed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 05/10/2012
Comments: 30-day public comment period ended on April 30, 2012. No comments received. DTSC approved the Removal Action Workplan without modifications.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 03/01/2013
Comments: The Report documents the removal action, which consisted of excavating soil contaminated with arsenic and total petroleum hydrocarbons in the first two feet of soil, backfilling with clean imported fill, and confirmation soil sampling. Since residual soil contamination above levels that allow for unrestricted land use remains deeper than two feet below the ground surface, the remedy includes a Land Use Covenant restricting sensitive land uses on the site and requiring a soil management plan if soil deeper than two feet is disturbed.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: *Correspondence - Received
Completed Date: 10/07/2010
Comments: The extension is being requested because delays in completing the building demolition and debris disposal continue to prevent access to soil sampling locations. Extension request was granted. New due date for the Supplemental Site Investigation Report is December 1, 2010.

Completed Area Name: PROJECT WIDE

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Cost Recovery Closeout Memo
Completed Date: 09/29/2011
Comments: Closeout for site code

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Completion Report
Completed Date: 06/06/2000
Comments: Completed RA. 80 cubic yards of soil containing lead, arsenic and chromium was excavated. The site was then backfilled, graded and compacted meeting city requirements. Groundwater sampling did not detect any groundwater contamination.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Removal Action Workplan
Completed Date: 02/16/2000
Comments: Approved RAW requiring the excavation and backfilling of soil containing lead, arsenic and chromium in the upper foot of soil.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Remedial Investigation Report
Completed Date: 04/08/1997

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 12/22/1987
Comments: The Department of Health Services, Toxic Substances Control Division provided comments on the letter from Varian Solid State Microwave Division, dated November 9, 1987, in which Varian responded to a Report of Violations issued to the Varian facility located at 3251 Olcott Street. Copies of the Report of Violations and Varian's November 9, 1987 response letter are not available in DTSC's file.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 09/07/1993
Comments: Varian submitted to DTSC on September 7, 1993 a letter with documentation intended to demonstrate that they used less than 1,000 pounds of acids on a monthly basis during their occupancy of the site. Varian submitted this documentation to support their argument that they should not have to pay fees for the facility based on the quantity of acids used and the quantity of discharge from their acid neutralization system. Included with the letter are four attachments with the amounts of acids stored, their waste water reports, off-site shipments of corrosive wastes, and their rinse water pH calculations.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 03/18/1991
Comments: Varian submitted to the U.S. Environmental Protection Agency a request to transfer their EPA ID No. CAT000625392 for the facility located at 3251 Olcott St to Litton, Solid State Division following the sale of the facility on February 25, 1991. Varian requested that their name be removed from the registration for the facility, and stated that they no longer assumed any responsibility for operations at the site. Varian indicated that Litton would submit a request for transfer as well. A copy of the request from Litton is not available in DTSC's file. There is not a copy of a response from U.S. EPA in DTSC's file.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Correspondence
Completed Date: 05/11/1984
Comments: The Department of Health Services, Toxic Substances Control Division (DHS) sent a letter responding to the request from a variance from Varian Associates, Inc. Solid State Microwave Division (Varian) for a variance from the Hazardous Waste Permit requirements and to revoke their Interim Status Document (ISD). Varian made the request because they no longer stored wastes for more than 90 days at the facility. DHS denied the variance request, stating that there was concern over possible leakage of the contents of the sumps used for wastewater neutralization. DHS did indicate that they would modify Varian's ISD to reflect that they were not storing hazardous waste for more than 90 days. A copy of the Varian's request for a variance and to revoke the the ISD, reportedly made on May 6, 1983, could not be found in DTSC's file.

FINDS:

Registry ID: 110000786070

Environmental Interest/Information System
HAZARDOUS AIR POLLUTANT MAJOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Completed Date: 09/24/1994
Comments: Regional Water Quality Control Board case closure and other letters.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: Site Screening
Completed Date: 10/27/1992
Comments: The present level of contamination at the site poses a significant threat to public and environmental health. Therefore, PEA of high priority is recommended. The site consists of two manufacturing facilities operated by Kawasaki Wafer Technology (KAWATEC). Both onsite soil and groundwater were contaminated. Soil was contaminated by heavy soils and perchloroethylene (PCE) beneath the drum storage area at the site. The solvents found were primarily perchloroethylene (PCE) (440 ppb) and trichloroethylene TCE-(430 ppb), and some of their breakdown products. One of the solvents, PCE (100 ppb), has migrated to the upper most aquifer in both identified source areas. The current levels of contaminants at both soil and groundwater exceeded the state action levels and pose a significant threat to public and environmental health. Based on available information,

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

| Number of Days to Update: 74 | Next Scheduled EDR Contact: 06/11/2018 |
| | Data Release Frequency: Varies |

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing

The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water board's review found that more than one-third of the region's active disposal pits are operating without permission.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

USGS TOPOGRAPHIC MAP

Target Property Map: 5640416 SAN JOSE WEST, CA
Version Date: 2012

North Map: 5640070 MILPITAS, CA
Version Date: 2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

| <u>Flood Plain Panel at Target Property</u> | <u>FEMA Source Type</u> |
|---|-------------------------|
| 06085C0227H | FEMA FIRM Flood data |
| <u>Additional Panels in search area:</u> | <u>FEMA Source Type</u> |
| 06085C0064H | FEMA FIRM Flood data |
| 06085C0068J | FEMA FIRM Flood data |

NATIONAL WETLAND INVENTORY

| <u>NWI Quad at Target Property</u> | <u>NWI Electronic Data Coverage</u> |
|------------------------------------|--|
| SAN JOSE WEST | YES - refer to the Overview Map and Detail Map |

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

| | |
|-----------------------------|---|
| Search Radius: | 1.25 miles |
| Location Relative to TP: | 1/4 - 1/2 Mile SW |
| Site Name: | MONSANTO CHEM CO SANTA CLARA PLT |
| Site EPA ID Number: | CAD009156290 |
| Groundwater Flow Direction: | Northeast |
| Measured Depth to Water: | approximately 10 feet in the upper aquifer and 200 to 250 feet in the lower aquifer. |
| Hydraulic Connection: | A dense blue clay aquitard separates the upper aquifer and lower confined aquifer. |
| Sole Source Aquifer: | No information about a sole source aquifer is available |
| Data Quality: | Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s) |

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

| <u>MAP ID</u> | <u>LOCATION FROM TP</u> | <u>GENERAL DIRECTION GROUNDWATER FLOW</u> |
|---------------|-------------------------|---|
| Not Reported | | |

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Quaternary
Series: Quaternary
Code: Q (*decoded above as Era, System & Series*)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: BOTELLA
Soil Surface Texture: clay loam
Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.
Soil Drainage Class: Not reported
Hydric Status: Soil does not meet the requirements for a hydric soil.
Corrosion Potential - Uncoated Steel: MODERATE
Depth to Bedrock Min: > 60 inches
Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

| Soil Layer Information | | | | | | | |
|------------------------|-----------|-----------|--------------------|--|--|---------------------------|------------------------|
| Layer | Boundary | | Soil Texture Class | Classification | | Permeability Rate (in/hr) | Soil Reaction (pH) |
| | Upper | Lower | | AASHTO Group | Unified Soil | | |
| 1 | 0 inches | 9 inches | clay loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils. | Max: 0.60 Min: 0.20 | Max: 7.30 Min: 5.60 |
| 2 | 9 inches | 41 inches | silty clay loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils. | Max: 0.60 Min: 0.20 | Max: 7.80 Min: 5.60 |
| 3 | 41 inches | 76 inches | sandy clay loam | Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils. | COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. | Max: 0.60 Min: 0.20 | Max: 7.80 Min: 5.60 |

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: No Other Soil Types

Surficial Soil Types: No Other Soil Types

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: No Other Soil Types

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Source: Department of Fish & Game

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations

Source: Department of Conservation

Telephone: 916-323-1779

Oil and Gas well locations in the state.

RADON

State Database: CA Radon

Source: Department of Health Services

Telephone: 916-324-2208

Radon Database for California

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.
