Support for Offshore Renewable Energy

I enthusiastically support the proposed California Offshore Renewable Energy Project for the California central coast. It is a first tentative step to combat the existential threat of global climate change. It will reduce carbon emissions and provide a clean energy source. The construction will be done in such a way as to not pose a unreasonable burden to aquatic and aviary life and will be sufficiently distanced from shore as to not have significance impact on ocean views. It will not place an unreasonable burden on the US Navy's weapons testing operations in the area. It will provide a much needed economic development in the region to offset the economic loss represented by the gradual closure of the Diablo Canyon nuclear power plant. It's construction and operation as a prototype will encourage further investment in much needed, large scale, sea-based renewable energy projects. Finally, I am reminded that the campaign against global climate change, as with any battle, can not be fought and won without some sacrifice for the greater good to be achieved.
