## **I Oppose offshore wind development farms**

As a native Californian, who cares deeply about our environment, I strongly oppose offshore wind development/farms. Renewal energy should be generated from the sun -- on top of buildings. We must stop destroying the natural environment (including offshore areas); do not use "renewable energy" as an excuse for this destruction. Human development always yields unintended impacts and consequences on non-human animals and living organisms; this will happen with any offshore development as well. Much marine life (plant and animal) cannot tolerate energy forces, sounds, etc that will result from the windmills spinning, electricity flowing, etc. The construction of offshore windmills will also have negative impacts to the marine environment and animals who rely on that area for their homes.

IF we want clean energy is can NOT come at an expense to the environment and non-human animals and plants with whom we share this planet. WE must create clean energy from the sun -- not solar farms (which destroy habitats) but through requirements that all buildings generate electricity from their rooftops.

Offshore wind development will only cause new and more environmental problems.

Stop wasting money trying to create a solution that will only cause more problems -- we know solar energy works, now we need to get those solar panels on every rooftop in CA.
