Houses of Worship to be eligible for DC Fast Charging funding

Houses of Worship are dotted across our communities, many with parking structures and many with a moral imperative to act on climate change and care for their communities. This makes them perfect candidates to host public EV charging. Many want to do just that, but they are limited to state funding to Level II chargers. This limits partnerships and ability to instal. Including Houses of Worship as community sites that are eligible for funding for Level III chargers will increase access to clean transportation infrastructure for all.
