## **17- MISC-01, and Offshore Renewable Energy**

The proposal for Wind Energy collectors off the Big Sur and Morro Bay coast is robbing Peter to pay Paul. Right in the middle of the Whale migration corridor, those that have studied this say that the vibrations and noise will very much destroy the health and communications of the whale population and other sea life. This alone makes this kind of energy development absolutely not worth it. As we are trying to reduce our fossil fuel foot print on the earth, we cannot in good conscience destroy other species that we are trying to protect. For us to create "Clean Energy" we need to be very diligent in our development of a system that does not have any other negative effects. It looks from here like this method is falling prey to a "developer's scheme" to get rich and not care about the safety of our planet and it's species.
