Clean Energy 100% 2030

I live in Southern California. The other day my son sent me a photo of the orange sky above his San Francisco home. That day, I took a similar photo of MY orange sky. And the following day, a friend shared a photo of her orange sky- in Oregon!! This has to stop! My home has operated fully or nearly fully on solar power since 2007. There's no excuse to keep using harmful power sources! It's more affordable than it seems. I simply made a small down payment then took out a loan structured for a payment the average amount of my monthly power bills. No change in my monthly power bill. And no rate increases! Most property owners should be able to do this as they're paying the power bills anyway. and subsidies should be available for those that can't. How about a low interest rate loan for all who put in solar?
