Propane

We all want to reduce pollution. Using Propane helps to do that. Propane emits 60% less carbon monoxide (CO) than gasoline, 98% less particulate matter than diesel and contains virtually no sulphur – a contributor to acid rain. It emits practically no soot, and low hydrogen and oxides of nitrogen, which are the basic precursors of ground-level ozone, or smog.

So why do you want to get rid of it?

That is foolish unfounded government overreach.
