## **My Right To Use Propane**

We live in a part of Santa Rosa where we use propane to heat our house. After we lost our home in the Tubbs Fire in 2017, we rebuilt our house on the ashes of the house that burned to the ground. We are not allowed to install a wood burning fireplace (which we used frequently to help heat our home), so we are totally reliant on propane for our stove, our house water heater, our two fire place inserts, and most importantly - our generator which is essential with today's power shut-downs. We are on a well and, as is obvious to most, no power = no water! To eliminate propane as an energy source is not only ridiculous, it is irresponsible. California is not ready to eliminate from the people of this state another energy source. By ridding the sources of energy from nuclear power, hydropower, and such without having in place sufficient alternate sources of energy to fill the void is idiotic, at best, and further proof that there is very little foresight among those who make the rules. When wind and solar power can match the output of the former sources of our power, ask me again about propane at that time.
