## **Please include Cool Roof Ordinances**

It is critical that the new 2022 Building Energy Efficiency Standards (Title 24) include language to ensure that Cool Roofing materials are mandated in the state for all buildings constructed between 2022-2026. There is enough research to show that as the climate continues to warm roofing materials can have a massive impact on overall temperatures. The communities at highest impact are generally lower income communities and those that are in desperate need of redevelopment.

Thank you for considering Cool Roof Mandates.
