Clean Energy Now

The state should consider accelerating/speeding up the goal for SB 100. We need a clean energy source by 2030 and no later. The constant usage of fossil fuels has led to hotter winters every year, pollution of our air, and large releases of greenhouse gases. In these past few years, we have experienced constant fires and hotter winters. Schools have had to close down countless times because the air becomes too polluted to and the younger generation will be left dealing with the reproductions that we did not have a hand in creating. It is the state's responsibility to ensure the well being of the people and the poor living conditions fossils fuels have created does not live up to proper living standards.
