We Need 100% Clean Electricity by 2030

As a resident of Riverside, California, I have been close to many wildfires. During the summer seasons, my phone will chime notifications about any wildfire news that are occurring near my location. Every time such notifications arrive, I fear every time whether or not the flames will reach my home. I would see the sun turn red, and the sky turn yellow gray.

Thus, to prevent further heats and wildfires, I want the state to consider to start a more ambitious clean electricity goal. The current goal of the state is to get 100% clean electricity by 2045. However, I believe that time is way too long, and the state should accelerate the process. We need 100% clean energy by 2030.
