## **Solar just another asbestos scenario**

It seems whenever someone comes up with some new great idea, they never follow through and do the research. Attracting the one million degree sun will eventually just burn up the earth. There are so many other ways to save energy. Where I live in the desert, they should have included roof vents expelling hot air from the attics, when bldg. homes, just a cost of 200.00, and would have saved so much energy, put set up for washer dryers close to outside walls, to be able to run a hose & be able to water yard with gray water, employees to allow during a drought. They wrong central air systems for 2 story homes, causing condensing units to work harder. Who are these builders, and bldg. permit employees to miss all these simple solutions? I am a 70 yr. old woman, and I know this?
