## **Require All-Electric Construction - Building Code**

Gas leaks are costly to repair, and will not be eliminated. Those of us who have worked for gas companies have noticed that there is a strong effort to protect against incidents that would result in bad publicity, but the high cost of detecting and repairing minor leaks means that they go unrepaired. See, e.g:

It is clear that damage to the environment from fossil gas leaks requires curtailment of gas operations within the next decade or so. To allow the continuing construction of buildings that rely on fossil gas would be a dis-service both to the property owners and to occupants of the new structures. It is your duty to let builders, the gas companies, and businesses that produce gas appliances know that fossil gas has no future.
