Mechanical Acceptance Test Technician Implementation

Mandating acceptance testing be performed by a certified technician, where only 350 technicians are available state-wide is an unacceptable burden and hardship. Of those +/-350 certified technicians the chance that any will be located in the remote regions where the majority of my clients projects are located. The requirement that a technician, in many cases, will be required to travel many miles (billing at hourly rates) to certify a remote project is an inequitable undue hardship that should not be imposed on these individuals.
