Earthjustice Supporter Comments for the 2022 Energy Code Pre-Rulemaking Docket

Additional submitted attachment is included below.

April 12, 2021

Submitted to Public Docket

Chair Hochschild & Members of the Commission
California Energy Commission
1516 Ninth Street
Sacramento, CA 95814

Re: Thousands of Californians Support Requiring New Buildings to be All-Electric

Dear Chair Hochschild and Members of the Commission:

On behalf of Earthjustice, we are submitting the comments of thousands of Californians that weighed in on the 2022 Building Energy Efficiency Standards.

Attached you will find the 2,630 letters that asked for all-electric new buildings. Californians are eager for the CEC to build on the efforts undertaken by dozens of cities throughout the state to phase out harmful gas from buildings.

We appreciate your consideration of this broad support for all-electric buildings and healthy homes in California.

Sincerely,

Matt Vespa
Staff Attorney
Earthjustice

Lisa Lynch, Elk Grove

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. Please make our state safe and have a better future! As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Larry Bathgate, Mill Valley

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. While electricity should be a primary energy source for new homes and buildings, natural gas still has a role to play as a backup source for home heating and cooking. The recent cutting of electrical power to California homes and businesses due to public safety electrical power shutoffs has been a severe hardship for many in California. Our home, which has gas-powered stoves and water-heating was the only bright spot during those otherwise dark days of PG&E's PSCS events. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Lana Kitchel, Los Molinos

"We live close to Paradise, which was horrifically devastated by the CampFire wildfire. And last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Gabriela Sosa, San Diego

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. We have to get our priorities straight! Survival or eating outside with a gas heater? Why aren't there solar heaters for this? As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Susan J Davis, Los Angeles

"This is not new, but it is vitally important for all who live in CA. Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe,

and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Nick n, Rancho Cordova

"California Fires & Drought Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. We MUST have a Green New Deal. Then triple the scope of that deal! Go really big, or go home! Thank you for your service and attention. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Ben Woodard, Truckee

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. I believe that this proposal is a good start. However, I believe that it is important to go beyond this and start the process of retrofitting existing structures. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these

catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Melissa Waters, Laguna Niguel

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. Please make sure we rapidly transition to clean, renewable and sustainable energy soon. That we also create infrastructure to minimize risks such as wildfires. Perhaps we could do a fee and dividend program similar to the Energy Innovation and Carbon Dividend Act that was in Congress last session? California, with our technological and research might, should lead the US in how to transition. Thank you. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

David Bezanson, Santa Cruz

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. When leaks (of methane) from NG pipelines plus the emissions of combustion of NG are combined, the total GHG release is comparable to that of thermal coal combustion. Over 1,000 leaks are reported daily in CA. As communities suffer from extreme heat and

wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Claudia Ponath, Oakland

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. If we want to continue to live on this planet, we need to take decisive action now to transition out of fossil fuels. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Saran K., Los Angeles

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. Include solar too. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Debra Marks, El Cerrito

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. You've proven so far that where there's a will there's a way with the aggressive and well-organized vaccination rollouts as of late: Why can't the same urgency and innovation of a new i-phone update be applied to decommissioning deadly fossil fuels? Stop worrying about the color or style of the wallpaper when your drywall is rotten and your shingles are tearing off the roof. Roll out the solar modules! Have a contest: Which city can go all renewable first?!? As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Theresa Andrews, Oakland

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. My son has asthma & his asthma was much worse due to the poor air quality caused by the fires. We need to act NOW to get our climate under control. Denying climate change is a very dangerous & uneducated position. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. Claira Judd, Glendale

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. Many likened the appearance of our skies to the red fumes above Mordor in *The Lord of the Rings* or a terrible sci-fi dystopian nightmare. These events will only continue to occur and occur with more frequency the more we continue to use fossil fuels like natural gas. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Audrey Yee, San Francisco

"I support all-electric energy in our cutting edge state. Yes, I'm a fifth generation Chinese-American whose culture is practically defined by gas cooking. During the numerous blackouts we suffer in my neighborhood, gas provides us a way to cook food. Yet, I believe that gas is not a sustainable solution to our energy needs. Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Andrew Reich, Los Angeles

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. It is a crisis, and we need to start treating it as such. No more tiny, incremental steps. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our

planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Priya Gehm, Santa Monica

"Ask anyone that knows about the energy loss involved in grid tied centralized electricity. Centralized 'green' power & then building the grid to accommodate is IDIOTIC if we are in a rush to clean up the grid, concerned about financial impacts, or concerned about the environmental impact of centralized green power plants & grid ties. Contact the city of Anaheim & ask them about their non-profit downtown utility. It terrifies me to get emails from Earth Justice that are just lobbying for the Green New Deal, which is just the latest financial assault on American resources & will delay greening the grid. We should incentivize near & on site solar by making it reasonably profitable to oversize solar - not by encouraging people to cut down trees. PPAs should be profitable or our local municipalities should form non-profit PPAs. I will always vote against politicians that try to push for centralized 'green' power plants & I already have. EARTH JUSTICE needs an ethical overhaul. The message they attached to mine represents the opposite of what is best for people & the planet. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Wendy Zukas, Graton

"None of us can forget that in 2020 we experienced the worst wildfire season in California's history. I'm a 72-year-old retired woman who had to evacuate my home near Forestville in Sonoma County twice during the fall. It was stressful and heartbreaking to wait for days, not knowing whether firefighters would be able to save my neighborhood. The smoke blanketing the entire state made it difficult to breathe. Aggressive action to combat the climate crisis is needed NOW!As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this

from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Jack Salem, Los Angeles

"You're very much aware that last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. We may very well have reached the tipping point, so there is no time to waste. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Rich Elam, San Diego

"Buildings can have SOLAR during the day and Wind other times and there are ways to store Heat and Electricity. This creates many more Jobs than the Status quo fossil fuel. Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Shabad Khalsa, Sacramento

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. We must disengage from using fossil fuels. We are in a crisis, the biggest of our lives. We need to act on all fronts. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Mary Bull, San Francisco

"Heat exchangers!!! We need subsidies/low interest loans to upgrade dirty tech for clean in old buildings! And of course new buildings must be all-electric—San Francisco has already embraced this policy! Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our

planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Mary Lopez, Citrus Heights

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. Reestablish money that Trump took away for needed brush removal and all important measures to maintain our Forests to prevent all the mass destruction from the fires! This is vital not only for the trees but all the lives, homes and wildlife that were destroyed by the massive fires in all of California...As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Thomas Hazelleaf, Seal Beach

"Climate change is real and we are running out of time to limit it. We don't need natural gas in new construction and we do need incentives for retrofitting existing gas installations.As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Margaret Kitts, Lake Forest

"Last year, we suffered through the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

christine hoex, Santa Rosa

"In 2017 my brother lost his home and just barely got out with his life in the Tubbs fire in Santa Rosa. I did not expect that this would become the norm, but it has. Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. That's why the move to all electric leads the way for a clean energy future. This will help to build the infrastructure of our new Energy system. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you

have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Catherine Krueger, El Cerrito

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As paradoxical as it seems to demand an electrification it is the best way to combat Climate Change. Solar panels are the way to go... The planet is getting hotter with more sunny days, battery backups will help alleviate the demand on the grid too. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Adia Harrison, Oakland

"You tell us regular people to use less electricity from 4-9pm yet all the empty buildings in all the major cities have all their lights on day and night. Make it make sense. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Darienne Hetherman, Altadena

"Increasingly catastrophic wildfires in California have made it clear that we need to take immediate and aggressive action to prevent extreme climate hazards. The air we breathe—and therefore our very lives—depend on it. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Susan Sloan, Los Angeles

"Last year, we experienced the worst wildfire season in California's history. The smoke that circulated across the entire state made it difficult to breathe (and I already suffer from a lung disease) and made it clear to me that we can no longer wait to take aggressive action on behalf of combatting our climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Jane Fowler, Granada Hills

"In October of 2015 we experienced the worst gas blowout in US history here in Southern California. Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. Between the gas blowing out at an uncontrolled pace for 4 months at the Aliso Canyon gas storage facility and at multiple other locations AND the fires our air is the worst it's ever been. Please help us. We're literally sitting on ancient gas and oil pipelines. And with the fear of fires.... we are bound for a catastrophic event. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Jeanette Alosi, Chico

"I live in Butte County, California and experienced first hand the devastation caused by the 2018 Camp Fire killing 86 people in our community. Last year, we experienced the worst wildfire season in California's history. Dense smoke again invaded our community and air quality was either hazardous or very unhealthy for weeks. We must take aggressive action to combat the climate crisis. Building all new electric homes would be a giant step to decrease greenhouse gas emissions. California has always been a leader and defender of the environment. Please lead the nation in removing fossil fuels from heating our homes and cooking our food. Please support an all-electric California. Thank you. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for

decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Mariana Mellor, Thousand Oaks

"Please truly think of how hard it is for us families! I have a son with asthma and I have allergies and that's only part of how fires affect us! Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Ronni Solman, Los Angeles

"All-electric buildings NOW!! Not 3-4 years from now. Californians cannot wait!! Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Richard Soehren, Sacramento

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. All-electric homes are still controversial, but they needn't be. Even if moving to all electric is a two-step process, with a lot of education coming ahead of a mandate, we must start. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Carol Coar, Eureka

"As you know, last year we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As you read below, please remember that solar power, even here in Humboldt County along the ocean can use solar. As a person who has solar panels and backup batteries, this works. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our

planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Susan Blain, San Diego

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. In addition to methane emissions which are far more potent than carbon dioxide, gas appliances emit multiple deadly emissions indoors. This is a big problem in older buildings with older appliances that are mostly not vented to the outdoors. There must be millions of apartments in California where this is the case. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Mark Escajeda, Gualala

"The days of natural gas power plants providing the bulk of California's electricity are ending with the advent of climate change. We can manufacture energy cleanly. Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our

planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Dr Elleafy Concha-Leafequus, Richmond

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. I suffer asthma and migraines and nearly died in Richmond with no central air filtering my air. I had to purchase many HEPA filters and GN95 facemasks even before the pandemic. We need a new deal more than ever now, that completely rebuilds our ancient infrastructure for homes, cities, and transportation, to be powered 100% by renewable energy. And locate the 4G towers away from residential neighborhoods! As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Chip Sharpe, Bayside

"With our rooftop PV panels and a Tesla battery, our family is elated to discover how rarely we draw power from the PG&E grid, even with charging two electric vehicles. Now, we are preparing to replace our gas furnace and kitchen range with electric alternatives. This is clearly our nation's path forward into a healthy, sustainable future. However, families who lack the financial means with which we are blessed require significant support from California in order to access the financial and health benefits of solar energy. We must immediately begin the shift to all-electric homes and support it in a way that guarantees equitable access to clean, sustainable electric generation and storage. Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more

frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Christine Shewmaker, Woodland

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As of today, 42 municipalities have taken account to encourage or require all electric new buildings in CA. Time to make that state wide! See the list of the 42 here. <https://www.sierraclub.org/articles/2021/01/californias-cities-lead-way-gas-free-future> As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Oliver Bollmann, Sunnyvale

"As an architect, I recognize the power of our buildings in shaping who we are and how we live. Great buildings enliven us. Buildings that are not up to par affect us equally, though in deleterious ways. This includes not only our experience of everyday life, but also the more existential threats we may face, the foremost of which is Climate change. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Kristy Pace, Sherman Oaks

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. The earth will not be able to sustain any life, if we continue to burn, pollute and harvest resources at alarming rates. HUMANS MUST DO BETTER!As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Pietro G. Poggi, Emeryville

"As you know, last year we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis.As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our

planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Lionel Mares, Sun Valley

"Hello, I am writing to urge you to take action on taking measures to reduce and or eliminate the potential for wildfires that costs lives and the environment. Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Noel Andrews, Los Angeles

"I have had solar panels since April 2014. I love them because they lower my energy costs and I do not have to use gas to heat my home. Having panels also adds power to the grid. It is the best investment I ever have made. We need to require every public building power by clean energy. New buildings must have to be clean energy only and start converting any existing building now. Not only will this help clean up our climate but will increase good paying jobs. Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Cassandra Pierson, Woodland Hills

"The wildfires we here in California faced last year and the year before were like no others in our history. The resulting economic and health issues make it clear that aggressive action must be taken NOW to combat climate change!As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Jan Jones, El Cerrito

"Fossil fuels have nearly killed our planet, our home. We are way behind trying to ameliorate the damage. Some experts think, according to the data, that we have waited too long to correct the problems. Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis.As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Lilian Alecia Morgan, Felton

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. Thank you! As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Elaine Cass, Moreno Valley

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. I know that there is some opposition to all electric amongst those who love to cook, but I put in a new induction range, and it does just fine. What I would like to see is more information about heat pumps for our houses, so we can eliminate another big use of natural gas. It seems as if it's unheard of in Southern California. Also, to avoid using gas, we need to switch over to electric clothes dryers, but that means more help in getting a solar system installed on a house. Some of us have pools, with gas heaters, so I would advocate more help in finding solar systems that work well to heat pools. From what I've heard, there are some available, but they're not that effective. One of the biggest uses in my house is gas for the hot water heater. Again, some help in getting a solar system (with battery backup storage) put on the house that I can afford to buy, not lease, that would be a real help. Instead of us individually working to try to figure it out on our own, some guidance from your commission how to solve the above problems would be most welcome! As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Chris Eaton, Los Angeles

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. We need to protect our children and our state now. My Grandchildren are the first in our family to suffer asthma and it's getting worse. My siblings suffer COPD in our city with the nations most polluted air. LA is packed with trucks spreading out from our ports and warehouses and most of our homes still burn fossil fuels. We need to leave behind the old technologies of the 19th and 20th centuries and clean the air with modern technologies! This is a crisis! Fix it NOW!As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Tamara Trussell, San Rafael

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. In addition to making all new buildings electric, California MUST insist that our utility companies properly maintain and upgrade our existing infrastructure before they give anymore bonuses to CEO and leaders and shareholders. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only

grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Constance Franklin, Los Angeles

"The rampant wildfires are toxic to everyone, and the loss of biodiversity and habitat for wildlife is heartbreaking. Isn't it clear that we cannot wait any longer for aggressive action to combat the climate crisis?!As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Shyann Henderson, Los Angeles

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. My skin has suffered. My quality of breathing has suffered and I am 26 years old. When is enough, enough? As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you

have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

C E Mone, Trinidad

"Last year's wildfire season was wild indeed. The smoke blanketing the entire state made it difficult to breathe, increased asthma attacks and created serious breathing problems. Clearly, we cannot wait very much longer for aggressive action to combat the climate crisis. One solution is to electrify more and use fewer fossil fuels. But this electricity is generated somewhere and the real solution is to use much more solar and to enforce stringent building codes which make buildings, commercial and residential, passively solar. When Governor Brown was in his first term and everyone called him Governor Moonbeam, we were on that path. Somehow we got derailed. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Veronica Oberholzer, Oakland

"This past year we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it more clear than ever that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Misty Day, Fullerton

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy. While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children. But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay. We need hydrogen, wind and solar power now, Sincerely, Misty Day

As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Jenny Valenzuela, Santa Barbara

"Last year, we experienced the worst wildfire season in California's history. I am a Santa Barbara native and have loved here for almost 50 years, I have never seen anything like the fires we have now! It is truly frightening to have to live in a place that has a year round fire threat! Please do what you can to help us before our whole town burns. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Kathleen Smith, San Jose

"As stewards of the Earth, we must protect our environment and the health and safety of all who live here. Indoor pollution from gas appliances harms our health and safety and contributes to our climate crisis. Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Judy Dowell, Davis

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. We have no need for fossil fuels. Green and clean is what we need. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you

have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Claire Broome, Berkeley

"I'm a public health professional. The CEC owes it to California citizens and the global community to move as fast as possible on addressing climate change. As president David Hochschild told the En Banc meeting earlier this month, climate change is fundamental as the basis for decision making on policy. We cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Mark Cooper, Clearlake

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. Many houses in Lake County use either Heating Oil or burn Propane for heat. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Pamela Letourneau, Rohnert Park

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. I am a happy electric stove user! Let's move to requiring all new construction of homes and apartments to include electric stoves! As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Judy Lukasiewicz, Santa Cruz

"We need all electric buildings with reliable, clean rooftop solar and energy storage capacity for each structure. Power must be clean, renewable and easily affordable for all citizens and businesses. All upgrades and any new building must be energy efficient and powered from clean energy sources. Individual, efficient rooftop solar is the way to power residential communities. Larger industrial complexes must be built with efficient solar set-ups in combination with other forms of clean energy generation from public energy providers, as needed. We cannot continue to do things the way they were done in our past. We must do whatever it takes to end all of our contributions to pollution-based climate change. Widespread conservation of energy resources, reduced energy use, and clean-renewable energy sourcing is required to decrease greenhouse gases/pollution, which is feeding our devastating global climate warming impacts. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you

have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Susan P. Walp, Pasadena

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. Push people to electrify buildings, and make it easy to put solar panels on top. We'll be healthier and happier. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Sandy maliga, Elk Grove

"We cannot wait any longer for aggressive action to combat the climate crisis. We've known for decades that we need to end our reliance on fossil fuels and accelerate the transition to clean energy. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

R. Leslie Choi, Glendale

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. I am taking this personally and, as I need to replace my cars and appliances, I am replacing them with electrical ones! I have installed solar electric panels on my roof, and am about to install a solar water-heating system for my pool. I recently replaced my old gas-fired

hot water heater with a new heat pump water heater, which costs much less to operate than both gas and conventional electric water heaters. When my gas furnace needs to be replaced, I will be getting a heat pump unit. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Linnea Lagerstrom, San Diego

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As a resident of California, we must do everything in our power to make sustainable, environmentally friendly choices on a state and local level to mitigate ongoing climate disasters. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Kaylie Treskin, Bainbridge Island

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. The time is now to act for future generations - the future of life on this planet rests on your shoulders. As communities suffer from extreme heat and wildfire smoke, we

know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

David Burtis, Calistoga

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. Without strong government intervention to support a renewable energy base resilient infrastructure and end our dependence on fossil-fuels, climate-induced disasters will have increasingly devastating consequences our personal and collective survival. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Marvis J. Phillips, San Francisco

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. The other important, if there is a problem within the gas line, the resulting pressure build-up can lead to a Natural Gas Explosion which can level the entire building killing some to all of its tenants and starting a massive fire. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Cinda Johansen, Folsom

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As a long time environmentalist and recent addition of solar panels on my roof I fully support totally revamping how and where we get our energy to keep our homes electrified. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Cinda Johansen, Folsom

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As a partial solar customer I feel it is time now to put only renewables in place and get rid of coal and oil as our primary electricity producers. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

judith ostapik, San Francisco

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. There is a heated (pardon the pun) debate about how do you cook your food when there is a shutdown of electricity because of fire danger--you use your gas stove. I have used a glass-top electric stove for over 40 years. You plan for disaster. If we could put solar panels on every home, localize our electric distribution system, and have battery storage, we could have a healthier population and a survivable future. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Kimberly Kolpin, Huntington Beach

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. California should be the leader in implementing renewable energy into homes and businesses - and I urge you to take that lead! As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Loril Sweet, Sebastopol

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. We need to stand strong for all electric buildings. We need to stand strong for electric cars. We need to stand strong for NO MORE FRACKING AND USING FOSSIL FUEL FOR ANYTHING AT ALL. WE NEED TO PROTECT WHAT IS LEFT OF THE LIFE FORCE FOR PLANET EARTH! DO NOT BE BOUGHT AND SOLD BY BIG OIL! DO ALL YOU CAN TO PROTECT THE LIFE FORCE FOR YOUR OWN AND EVERYONE'S CHILDREN. Sincerely, Morthor Earth and ALL LIVING BEINGS OF THE PRESENT AND FUTURE As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Angela Jaggars, San Jose

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. This is extremely important for all California residents. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Karen Klepack, Costa Mesa

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. All-electric homes are less expensive to build, are more energy efficient, and healthier for the residents. My home only uses gas for a furnace, and this winter my gas bill has been more expensive than the entire rest of my home, including my electric car. This is because I have an efficient heat pump water heater, and I leverage my TOU rate to minimize my electricity costs. Do right by Californians by moving to all-electric buildings, so that we can all have clean air to breathe. We will never meet California's climate goals if you cater to special interest groups and delay on climate action! As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for

decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Agnes Tam, Fremont

"Climate change is real and is costly. Last year, California had the worst wildfire season ever. Millions of acres of forests were destroyed. The smoke produced made it difficult to breathe. We need aggressive action to combat the climate crisis. We need clean air. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Tanya Baldwin, Los Gatos

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Rebecca Shirley, Santa Rosa

"You must already know this, but it is new information to me. Natural gas is a big pollutant! We need to all get busy and install clean energy into new homes, and support homeowners in replacing gas appliances. We citizens need your leadership and action in order to do this. Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Kerreen Brandt, San Rafael

"I have asthma and last year was a disaster for me and many others in California. Last year, we

experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Robin Vosburg, Bakersfield

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. All electric housing is vitally important to the health of California residents and to the planet. And because many electric stoves require expensive specialized pots & pans, low income households will need assistance to obtain them so that they are not shut out of the all electric transition. There is more to the problem than than just gas combustion, and low income Californians will need more than just all electric housing to make this work for them. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

DeeAnn Bradley, Hemet

"As a Firefighter's wife I didn't see much of my spouse last year. We experienced the worst wildfire

season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Patricia Stevens, Oceanside

"Last year, we experienced the worst wildfire season in California's history. Thick smoke in our community from a previous fire had damaged my lungs. This time, the smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Robert Diebold, Oroville

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. Sincerely, R. C. Diebold As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only

grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Cheryl Ann, Santa Monica

"I have lived in California for over 40 years and I've seen with my own eyes and felt with my own lungs the devastation that we are facing. Maybe if we didn't spend so much money on fracking or giving away water for pennies on the dollar to the Nestlé company and stopped considering open doing new drilling in fracking licenses we wouldn't be in this situation. I consider California the most progressive state in the country and why I moved here from the East Coast. I was at the first Earth Day in NYC in 1970 and I never fathomed we would be here and 2021. Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Shannon Healey, Menlo Park

"If there were a state-wide policy requiring all-electric buildings in California I wouldn't be stuck renting an apartment with a gas stove and a gas heater. Whenever I turn on my oven I have to leave the kitchen for a few minutes so the terrible gas smell dissipates. Not only does that gas smell bad, but it is also bad for my health. As an apartment dweller, I don't have the option of replacing the stove and heater with

electric. Unfortunately a lot of affordable apartments have gas utilities. Changing the policy state-wide requiring all-electric homes and buildings would help apartment dwellers like me. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Jen Rund, Novato

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. All electric homes and businesses - powered by sustainable energy! - would be a great step in cleaning up California!As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Kathy Gay, San Francisco

"California has been a leader in transitioning to zero-emission vehicles, and it is now time to do the same for our homes, schools and workplaces. Continuing to burn fossil fuels is harming our planet and damaging our health. You have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. Please use your influence to make this happen - there's no time to delay. Sincerely, Kathy Gay
As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

Sasan SAADAT, Saratoga

"We need to stop digging ourselves into a deeper hole. We're going to need all the low hanging fruit we can get this year for climate action, and that's what an all electric building code would do for our State. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our

planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Jacqueline Enfield, Glendale

"We live in earthquake country! Installing gas lines over faultlines is FOOLISH tempting of fate! Haven't we learned since the 1906 San Francisco earthquake? The city burned and so many people burned with it due to GAS LINES!!! I encourage you to Google it as it is a part of history. We have had over 100 years to study and learn from this and yet we are seeing ongoing stupidity and greed. Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our

planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

John Sabo, Hermosa Beach

"Last year, we experienced the worst wildfire season in California's history. My family chose to spend the summer in another state to avoid the health hazards because smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Andre Jalobeanu, Mountain View

"New buildings should be all-electric, but home remodels should be subject to the same legislation as new buildings. All upgrades should be fossil fuel free. Households should receive credits depending on their income so everybody can afford the upgrades. This also goes with better energy efficiency, and more should be done to help retrofit old houses and replace windows and improve insulation. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

President Cristina Grappo, Oakland

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. We deserve the best air quality and clean energy sources. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Tanya Salof, Rosemead

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. The greed exhibited from private electric companies is outrageous. Do the right thing and end fossil fuel dependence or our next generation may be our last. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you

have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Nancy Hiestand, Davis

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. Are you committed to doing what is best for our health now and in the future? As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Pat Wolff, Arcadia

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. While some people say the drought in the West isn't really due to climate change, it certainly is cause of suffering and that is due to unwise use of resources, such as wasting water and building homes in unsafe locations. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Judy Christensen, Sebastopol

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. Many of us had to evacuate with nowhere to go! Paradise completely burned down. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Lawrence Abbott, San Leandro

"Almost every year, we experienced the worst wildfire season in California's history. The smoke blankets

the entire state made it difficult to breathe, and it is clear that we cannot wait any longer for aggressive action to combat the climate crisis. We must take action NOW!As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Jeanie Scott, San Francisco

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. Concerning gas: I have a gas stove and have never been comfortable with it. I worry that I will forget to turn it off or that gas will leak. I much prefer electricity. JeanieAs communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Richard Dawson, Los Angeles

"We cannot afford to delay retiring fossil fuels. The climate is already changing, and the consequences are dire. A crucial step in averting climate disaster is conversion to electric heating and cooking, both commercially and in the home. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100

organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Karen Beck, Danville

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. Communities are suffering from extreme heat and wildfire smoke. We know climate change isn't going away. We need all-electric buildings so our homes are healthy. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Warren Clark, Mammoth Lakes

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. Legislation or regulations should be crafted in such a way as to avoid any adverse effect on disadvantaged or tribal communities. Otherwise I strongly support moving from gas to electricity for both health and environmental reasons. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you

have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Patti Heller, Malibu

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. For our health, for our future, please embrace this plea. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Suzanne Keebler, Napa

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. I am proud to now live in a solar powered community. When I lived in San Francisco in a gas & electric apartment, my 225. Sq ft. place cost average \$68/mo. Now some months, I don't even have to pay anything. And I'm not breathing gas from a faulty heater. Asthma, emphysema, lung cancer & other illnesses are also caused by gasoline & airline fuels. Please help us. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Edith Ogella, Santa Barbara

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. We must enforce this for new construction, and give grants to retrofit. However, it will fail should this become a requirement for homes already built and occupied. Also, to all commercial kitchens to be built using gas will not impress the average voters. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Wendi Raw, San Francisco

"Last year, I almost lost my land to fire—we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Joan Murray, Los Angeles

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. Therefore, we need all-electric buildings as soon as possible! As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Lisa Henry, Carmichael

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. Gas use in homes is not healthy - for the environment OR us! As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Al Chase, San Francisco

"Failure to stop climate change will result in loss and suffering unprecedented – by orders of magnitude – in the history of humankind. As communities suffer from extreme heat and wildfire smoke, we know

the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Don Morrill, Davis

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. We built and moved to an all electric apartment building with induction electric stove tops. We've been very pleased with the performance, and it essentially beats time to boil water over natural gas. Every new building in California should be all electric. We need to reduce carbon at every opportunity. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Bonnie Pannell, Crockett

"For a state that is supposedly the most progressive leader in environmental matters, we have been slow to take action when it comes to fossil fuel use in homes and buildings. For the past two years, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more

frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Jonathan Georges, Los Angeles

"With climate change changing everything, the elimination of fossil fuels wherever we can is more urgent now than ever. Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Martha Booz, El Sobrante

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. Also, I have just about completed conversion of my 1952 house to all electric. I have an electric water heater, an electric stove, and am about to install two electric wall heaters, one for the bedrooms, and one for the living and dining rooms. I still have to convert the dryer to electric, though I usually use my clothesline in the carport to dry my clothes. Thank you for your attention. I urge you to require all new buildings to be all-electric, with no propane or other fossil fuels involved. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Honor H, Novato

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. And as a California resident, I urge you to act now to protect all Californians. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our

planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Jeanne Ertle, Chico

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. Although I appreciate the benefit of using a gas stove for cooking, I think the time has come for us to begin phasing out the use of gas in our homes. Please support all-electric buildings and healthy homes in new construction. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Janice Tarr, Los Angeles

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. We have to look to the future and make important decisions re: electricity in our homes so our children and grand children will have a chance to have good lives and less climatic disasters. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Emerson Ashby, San Luis Obispo

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. Last year I helped firefighters fight these fires by giving out the supplies, food, water and keeping the heavily touched areas sanitized to reduce the risk of spreading Covid-19. Many people have lost their properties and homes and millions of acres of natural habitats destroyed all because of these infernos. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Freda Hofland, Los Altos

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Gregory Fite, Hayward

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. We also need to protect net energy metering for solar generation, and we need to create the legal and regulatory framework to make it easier to build solar on existing condominiums. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Liz Amsden, Los Angeles

"We cannot wait any longer for aggressive action to combat the climate crisis. Last year, we

experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe. No more use of carbon fuels. No more tax incentives for the oil and gas industries. No more exploration or exploitation. No more gas and oil infrastructure. No more shipping. No more spills. No more fracking. Just clean it all up and look forward to a green future. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Akiko Tamano, San Diego

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. California has been my home since I was a toddler, but I'm increasingly concerned that the state will no longer be livable in the not-too-distant future. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Grace DelValle, Fairfax

"Let's make California first in tackling the climate crisis. All electric buildings and homes, with Solar panels or solar generated electricity is the way forward. Let's start NOW with new all-electric buildings.

Thanks you, Grace DelValle As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Ann Pinkerton, Oakland

"Last year, we experienced the worst wildfire season in California's history. I spent days trapped in my apartment in sweltering heat, unable to open the windows because the air outside was so polluted.As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Leonie Terfort, Mill Valley

"If we do not act on the climate crisis, especially our children will have a very bleak future. I have a child and I am asking you to take bold and sweeping action. Please see the magnitude of this crisis and govern accordingly. Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer to combat the climate crisis.As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Kim Anderson, San Francisco

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. So many myths about 'cooking with gas' the only real way for chefs or 'real' cooks. We MUST change. 'There is no Planet B.' As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our

planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Kathy Schaeffer, Sherman Oaks

"Electrification of buildings is one of the best ways to reduce greenhouse gases. It is important to set the standard for stringent building codes that encourage and/or require the decarbonization of buildings. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Gale Kirk, Newport Beach

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. The biggest consumer of gas is the electric company so they can generate electricity. This is a stupid proposal. Much better to require that new homes have solar power available for a reasonable cost. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Graciela Huth, Los Angeles

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. It is a new project in the 21st Century, let's start with our projects that reflect the future in which we live, use of clean energy to combat climate change, not with the dirty fossil fuels we used in the 20th century. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Rose Ann Witt, Thousand Oaks

"I'm the mother of a daughter who loves to run ... because running makes her feel alive ... & free. What started as an expression of joy became her passion. She wasn't graced with a runner's body; so to compensate, she trained harder than teammates who were. Whether I picked her up 3 or 30 minutes after practice ended, I always found her in the same place ... running extra laps around the track. My daughter was twice elected Captain of her high school's cross country team, as a Junior & as a Senior. She dreamed of leading her girls' varsity team to a state championship. But like increasing numbers of children & youth in CA, she also lives with asthma. We were unaware of her condition until she collapsed while competing in a race ... I watched helplessly as panic overtook my child's face, as she struggled to breathe ... & could not. Before the diagnosis, the episodes of respiratory distress came sporadically ... another interrupted race, another failure to cross the finish-line, & terrifying moments gasping for air in rush-hour traffic on a hot day with the car windows down. Eventually we learned that her attacks were triggered by oil & gas emissions ... including INdoor air pollution from my "natural" gas cooktop. Turning on your kitchen range & burning "natural" gas creates dangerous levels of health-damaging pollutants (including nitrogen dioxide, formaldehyde, carbon monoxide & particulate matter) INSIDE your home that would be illegal OUTdoors. So, no, "natural" gas is NOT "clean". Children who live with gas stoves are 42% more likely to experience asthma symptoms; & like the injustices of most

other forms of environmental pollution, the most vulnerable kids, especially those living in smaller homes or apartments without effective range hoods ... have the most exposure, with the greatest health impacts. We've ALL been lied to. Like the tobacco industry, the "natural" gas industry is waging a propaganda campaign against American families, to pad their own pockets. Industry doesn't want us to realize that just like oil & coal, "natural" gas is a fossil fuel. We should call it what it is ... FOSSIL gas. Most people haven't connected the dots between fossil gas, methane & OUTdoor air pollution ... let alone between between nitrogen dioxide & INdoor air pollution, fracking, plastic pollution ... & Global Heating. There's simply NO reasonable path to meeting our climate goals while continuing to burn fossil gas in our buildings. That's because fossil gas is mostly methane, which is even more potent as a greenhouse gas than carbon. 1lb of methane traps as much heat over 20yrs as 84lbs of CO2! I can't reverse my daughter's health impacts; but YOU can protect CA kids; Turn OFF the gas NOW with an all-electric building standard in 2022!As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Sheila Tarbet, El Cerrito

"The last few years, we have experienced the worst wildfire seasons in California's history. The smoke blanketing the state has made it difficult to breathe. It's crystal clear that we need aggressive action to combat the climate crisis now.As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you

have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Darrell Neft, Costa Mesa

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. We need economic incentives to convert electricity. Currently electric rates are a disincentive to change from gas heating to using a heat pump. Energy costs for electricity are more expensive per watt than Natural Gas. Encourage change to renewable energy. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Julie Neidich, Ladera Ranch

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. It is frightening for citizens to breathe in smoke and to see their neighborhoods burn. Yet, we can only expect more aggressive fire seasons as global climate change accelerates. I believe strongly in clean energy. It seems illogical that we can't prevent the destruction of our environment in California via simple measures like putting solar panels on all homes, especially the newly built. There is no reason why we can't do more now. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100

organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Andre Tarverdians, San Diego

"I'm including this line to indicate that I'm a real person and that this issue is important to me. Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Pamela Holley-Wilcox, Oxnard

"To address climate change, we must move as aggressively as possible to reduce fossil fuel emissions. All-electric buildings are part of the solution. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Linda Ray, San Francisco

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the

entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As a nurse I recently discovered that children who live in homes with gas stoves have twice the rate of asthma. Electric appliances are now better than gas and when sustainable energy source is used has no carbon footprint unlike fossil fuel. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Donna Murdock, Cerritos

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Sara Kupor, Berkeley

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our

planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Kim McCullough, San Jose

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Robin Reinhart, San Diego

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Rollin Odell, Kingston

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and

more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Natasha Saravanja, San Francisco

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Sandra Spaeth, San Marcos

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

JOHN harris, Pittsburg

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Natalie Haddad, Los Angeles

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Bob Wilson, Julian

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our

planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Anthony Kent, Paso Robles

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Jayne Cerny, Inverness

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Jane Gale, Thousand Oaks

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and

more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Ryan Schrader, Bellflower

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Stephen Markel, Los Angeles

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Laila Solaris, San Francisco

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Luke Alioto, Marina

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Leslie McCormick, Escondido

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Rashid Patch, Oakland

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Patrick Kissel, San Marcos

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Judith Pelletier, Moorpark

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and

more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

erik kemper, Laguna Niguel

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Linda Snow, Los Angeles

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Stephen Stroud, Pasadena

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Steve Hanlon, Los Angeles

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Eileen Karzen, Los Angeles

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our

planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Michelle Palladine, Palm Springs

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Margaret DeMott, Sacramento

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Leslie Helgason, Pebble Beach

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and

more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

JOHN Lamb, Sierra Madre

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Peter Hogan, Glendale

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Suzanne Menne, Camarillo

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Allen Chinn, Ventura

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Maria Barakos, Pacoima

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Linda Kourtis, San Diego

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Peter Smith, Fresno

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Utkarsh Nath, Fremont

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and

more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Noah H, Daly City

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Dana Wullenwaber, Redding

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Adam Trauger, Long Beach

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Amber Cohn, Los Angeles

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Carol Mazerall, Carmel Bay

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Ann Jaffe, Petaluma

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Priscilla Klemic, Van Nuys

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Gordon Cook, Rexford

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and

more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Trina Takahashi, Brentwood

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Donna Davis, San Jose

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

John Cronin, Garden Grove

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Allie Palmer, San Clemente

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Ann Adams, Cupertino

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our

planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Beth Lander, San Diego

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Julie Nelson, Irvine

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Kayla Nicholls, Redondo Beach

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and

more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Catherine Davila, Los Angeles

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Peter Bent, Goleta

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Maureen Mcdonald, Los Angeles

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Thomas Ray, Novato

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Deb Conant, Gilroy

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our

planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Kavita Sekhon, Los Angeles

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

radha krendl, Santa Cruz

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Elaine Genasci, San Luis Obispo

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and

more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Golda Michelson, Fairfax

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Gwyneth Smith, Sonoma

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Leslie Sheridan, Clearlake

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Michael Collins, Santa Cruz

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Ernest Walters, Union City

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our

planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Linda Dolezal, Placerville

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Kelly Kuvo Richardson, Venice

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

John Anderson, San Diego

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and

more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Randy Mills, Culver City

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

ken hetzel, San Jose

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Lori Bates, Oxnard

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Clydell Peairs, Hayward

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Raquel Narvios, San Francisco

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our

planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Stephen Roddy, San Francisco

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Jeffry Anderson, Novato

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Andrew Schwartz, Los Angeles

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and

more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Elena Ennouri, San Rafael

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Sara Ackerman, Berkeley

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Jessica Dacher, Encinitas

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Andie Rice, San Francisco

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Lily Munoz, Alhambra

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our

planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Mary Ames, Temecula

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Victoria Brandon, Northridge

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Dominic Garcia, Livermore

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and

more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Alexandra Dantona, Simi Valley

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Mary Page, Aptos

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Margaret Shekell, Los Angeles

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Samantha Le, San Francisco

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Rita Thio, Walnut

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our

planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Robert Reed, Laguna Beach

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Erik Conklin, Carlsbad

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Elizabeth Schumacher, Mill Valley

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and

more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."

Greta Yu, San Jose

"Last year, we experienced the worst wildfire season in California's history. The smoke blanketing the entire state made it difficult to breathe, and made it clear that we cannot wait any longer for aggressive action to combat the climate crisis. As communities suffer from extreme heat and wildfire smoke, we know the reality of the climate crisis means that these catastrophes will only grow more severe and more frequent. We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

We've known for decades that to stop this from getting worse, we need to end our reliance on fossil fuels and accelerate the transition to clean energy.

While California has been a leader in cleaning up the energy grid and transitioning to zero-emission vehicles, our homes, schools, and workplaces continue to burn fossil fuels. Not only is this harming our planet, it is damaging our health: burning gas in buildings is a major cause of air pollution and is especially damaging to the lungs of young children.

But you have the power to end our reliance on gas-burning buildings. Pollution-free, all-electric homes can help us tackle the climate crisis while creating safer, healthier lives for all of us. More than 100 organizations, from utilities, to architects, to environmentalists and health professionals, agree that you have the power to end the needless practice of burning fossil fuels in our homes. And Californians like me who want healthier homes and a protected climate are calling for it. There's no time to delay."
