## **All electric buildings in code by 2022**

I support all-electric buildings in the 2022 code cycle. Agencies like CARB and BARQMD have submitted letters that the CEC move to all-electric buildings in 2022. CARB adopted a resolution limiting emissions from gas appliances in buildings. The resolution commits CARB to support the CEC to adopt standards in the 2022 code cycle that will result in electrification of appliances for all new buildings. Biden has pledged to cut building emissions 50% by 2035. The IEA released a report that there should be no new fossil fuel home heaters sold after 2025. Gas home heating is a major source of carbon emissions in many countries, responsible for around 20% of CO<sub>2</sub> in the US and the UK. CEC put this code into effect!
