## **Require all-electric new construction**

We are in a climate emergency, and yet the CEC is taking an incremental approach to building electrification. The indoor air pollution produced from gas stoves is hazardous to our health, and is associated with increased asthma, cardiovascular disease and other health risks, especially in children. Waiting three more years for the 2025 update would cost Californians \$1 billion in unnecessary gas infrastructure, and lock them into 3 million tons additional carbon emissions by 2030. Electric appliances are readily available to meet the needs of all-electric buildings and all-electric new construction should be required in the 2022 Energy Code Update. Thank you.
