## **We Need All-Electric Buildings**

Buildings make up almost 40% of greenhouse gas emissions in the US and around 25% in California. You have an opportunity, right now, to significantly lower climate pollution from the building sector by requiring all new construction to be all-electric in the 2022 energy code update. Waiting three more years for the next energy code update would not only waste this opportunity to unleash a faster, more economical way to build housing in the Golden State, it would cost Californians \$1 billion in unnecessary, outdated gas infrastructure, and lock us into 3 million tons of additional carbon emissions by 2030.

Please require all-electric buildings in the 2022 code cycle. We are in a climate emergency!
