Stop dangerous flicker - require all indoor LEDs comply with JA8

Stop dangerous flicker - protect people's health!

Require all indoor LED light sources to comply with JA8 by being tested, their performance recorded in the JA8 database and being labelled "JA8" works. Requiring that some sources have to comply with JA8 but not others, creates ambiguity and makes the standard less enforceable.

In addition, remove all the changes to table 150.0-A and the new table 160.5-A so they match the 2019 requirements.

Do not exempt Title 20 regulated general service LED lamps from the requirements for JA8.

Align the flicker requirements in Title 24, part 6 and mandatory portion of Part 11 (CalGreen) with the IEEE-1789 standard "Recommended Practices for Modulating Current in High-Brightness LEDs for Mitigating Health Risks to Viewers."
