Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Pat Magrath, Upland, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Noah Haydon, Daly City, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Leo Cohen, Seaside, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Prof. Charles Wolfe, Sylmar, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms Laura Simpson, McKinleyville, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. In my opinion it is ridiculous that in a state with this much sunshine and this much environmental concern and this much intelligence and this much to lose if global warming continues unchecked that we do not have any law on the books to mandate solar on all new construction. Why are the roofs and parking lots of new warehouses/stores and businesses not mandated covered by solar from the get go. It seems this would go a long way to both reducing our reliance on fossil fuels and further bringing down the price of solar equipment as companies can scale up production. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ron Hart, La Verne, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. —Mrs. Lauren Alegre, Emeryville, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Victoria Shankling, Aliso Viejo, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. —Ms. Noel Lande, San Diego, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Paul Welch, San Jose, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Mark Reback, Los Angeles, CA

Dear California Energy Commission: As a Californian, I've been seeing the impacts of climate change firsthand for years so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Chris Eaton, Los Angeles, CA

Dear California Energy Commission: As a Californian, I already see the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The Draft Buildings Energy Code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. This plan is a step in the right direction although it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. As a child, I shoveled coal klinkers out of my grandparent's basement (1970s) and soot was all over the house, but my grandparents relied on a coal furnace because the local Coal Mining Co. employed my grandfather. They were awarded Black Lung Benefits later in life. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. 3D Printing (stereolithography) should be a vital part of California's new infrastructure, plumbing and irrigation for farms. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time. Aaron Webster

—Aaron Webster, Marina del Rey, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. John Golding, Oakland, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Vanessa I. Poster, Redondo Beach, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Ellen Redish, Palm Springs, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms Ann Killebrew, Richmond, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—James Haley, Castaic, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Harvey Sherback, Berkeley, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Sharon Blume, Penn Valley, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Thomas Harrigan, Marina, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impact of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Chris May, Pacific Palisades, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Melissa Grossman, Simi Valley, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Theresa Winterling, Atherton, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. When considering "clean energy" please note that biomass energy production wastes carbon sequestering of growing trees and creates air pollution. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—MS Donna Russell, Davis, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. —Mr. william todman, Beverly Hills, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. Gregory Tarsy, Santa Cruz, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Joan Normington, Folsom, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Katherine Osterloh, Orinda, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Kadence Nguyen, Westminster, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. —Alexander de Frondeville, Berkeley, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. (The big complaint I hear is that electric ranges aren't as easy to control as gas ranges, but having used an electric one for the last year, it's not that bad? I also hear that induction ranges are even better. In any case, I would absolutely prefer to live in a world where my cooktop is slightly less convenient but my home isn't choked in wildfire smoke three months a year due to climate change.) Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—John Draper, San Francisco, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Luis Guerrero, San Pablo, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Gregory Rossman, Mountain View, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Nicholson Jenkins, Oceanside, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Jean Lindgren, San Francisco, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Mary Jean SMITH, Solana Beach, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. It's much harder to have to go back and retrofit a building than to build it all electric in the first place. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. Karen Jacques, Sacramento, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. —Mr. Karsten Mueller, Santa Cruz, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Erin Stuart-Jennings, San Francisco, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Michael Margulis, Valencia, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Rosalie Salvato, Burbank, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. STEPHEN HUTCHINSON, Glendale, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Richard C. Wightman, Arcadia, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Charles W. Carroux, Belmont, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Marilyn Platt, Rialto, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Michael Barnes, San Diego, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Nikki Nafziger, Vallejo, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Elizabeth Murillo, Roseville, CA

Dear California Energy Commission: As a Californian living at the southern end of the San Joaquin Valley, I've been seeing the impacts of climate change firsthand for some time — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of mandating the very necessary transition to all-electric construction. Much more needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings sooner rather than later. Powering our homes and buildings with dirty fossil fuels already impacts my health and that of my service dog. Worse, it is a major contributor to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move now to a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today can ensure that California has the healthy clean energy future we all need and deserve. Thank you so much for your time.

—Ms. Robin A. Vosburg, Bakersfield, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Alan Solomon, Palm Desert, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. carol easton, aptos, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Ana Chou, Palo Alto, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Frank Seewester, Fairfield, CA

Dear California Energy Commission: As a Californian, I see the effects of climate change. Our summers have gotten much warmer, we have frequent droughts, water shortages, and forest fires in our area, with the associated power outages and general distress. I strongly support your draft buildings energy code. The draft buildings energy code would encourage more healthful climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. We have retrofitted our 80-year-old house with electric heating, cooling, and appliances. We have also installed regrettably gas-heated, on-demand water heating, which reduces gas usage substantially. We would have preferred an electric system, which is not readily available in the US. Powering our homes and buildings with dirty fossil fuels affects our health and is contributing to the climate crisis. Gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and to protect public health, California must progress to a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you for your time and careful consideration.

—Ms. Sharon Morris, San Leandro, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Petrea Sandel, Pasadena, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Alicia Kern, Palos Verdes, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Joseph Rothlisberger, Sherman Oaks, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Teri Sigler, Santa Cruz, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Connie Clausen, Oakland, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr Nick Moidja, Gold River, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Aylene Kovary, Sherman Oaks, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Linda Le Roi, Santa Rosa, CA

Dear California Energy Commission: As a relatively new Californian, I thought the major crises my family might encounter on moving here would be earthquakes. After several years of fires and smoke, I realize that they are a more prominent problem. California has always had dry years and forest fires, but it's clear the problem has increased exponentially over the past few years with accelerating climate change. In light of this, I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. Holly Smith, Berkeley, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Antonio Cervantes, San Francisco, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs Linda Mellen, NEWPORT BEACH, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Mark Hargraves, Sebastopol, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Ken Wilson, Santa Rosa, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Betsy Blondin, Berkeley, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—James Jordan, Gualala, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. THOMAS CRUMPTON, LOS GATOS, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Benjamin Bingaman, San Jose, CA

Dear California Energy Commission: As a Californian, I see the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined!!! This is alarming! To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time. I am confident you will do the right thing.

—Ms Emily Pfeiffer-Russell, Bakersfield, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Arnaud Dunoyer, Venice, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. I strongly urge you to insist that the revised building requirements for new construction specify all electric space heating and water heating, electric cooking appliances, clothes dryers and use of heat pumps and solar to power the electric appliances. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms Margo Reeg, Whittier, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Laurel Blossom, Los Angeles, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Andrew Bush, Topanga, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. Your plan takes us in the direction that we need to make our buildings more climate friendly and improve human health. But it stops short of requiring all-electric construction. Even more needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Let's keep California as a front-runner defining how the future can and should look.

—Ms. Gabbie Burns, Santa Clara, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Diane Mojica, Arcadia, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Laura Chenel, Sonoma, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Lenore Rodah, S Pasadena, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Tom A. Butler, Mountain View, CA

Dear California Energy Commission: We have just completed an all electric ADU addition on our property and over the past few years added solar and replaced every appliance except one (which will be gone within the next few months) with electric versions. It is the right thing to do, and by converting for the most part as our old appliances failed, was not a major undertaking. As a Californian, I support the draft buildings energy code to move our state in the right direction and lead the nation. Although we knew what we wanted, it was astounding how much resistance we encountered when attempting to find a plumber that would replace our old water heater with an electric option. We were even told by one provider that electric water heaters were not permitted by code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. Based on my experience as a willing homeowner, more needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Saundra Hodges, Castro Valley, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. —Mr. Charles Modjeski, Fremont, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Elizabeth Moore, Sunnyvale, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Jeff Shute, Sunnyvale, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Ed Scale, Manhattan Beach, CA

Dear California Energy Commission: As a California resident, I'm already seeing the impacts of climate change on our state. I'm writing today to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate-friendly buildings, improve air quality indoors, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utilities, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. Gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, not to mention seven times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to a 100% clean energy economy and protect public health, California needs to move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the sustainable clean energy future we need and deserve. Thank you for your time and consideration.

—Ms. Cameron Cole, Pleasant Hill, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Goldiss Nekouei Keller, South Pasadena, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. —Mr Joshua Stein, Berkeley, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Mari Matsumoto, Alameda, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Janet Bindas, Walnut Creek, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Karl Koessel, McKinleyville, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms Kimberly Thompson, Emeryville, CA

Dear California Energy Commission: I am a Californian, concerned about the effects of climate change, so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels affects our health adversely and contributes to global warming. Gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and seven times more nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an totally clean energy economy, and protect public health, California must make sure that all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that. Thank you for your time and attention to this vital matter.

—Ms. Mary Ames, Temecula, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Connie Kirkham, Clearlake Oaks, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Lu Shoberg, San Jose, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Tammy Fait, Hesperia, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Zoe Schwartz, Healdsburg, CA

Dear California Energy Commission: As a native Californian, I have long seen the impacts of climate change firsthand — so I am writing to support your draft buildings energy code as an excellent first step. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. Although this plan is a step in the right direction, it stops short of requiring multiple windmills on every roof, solar panels on southern walls, and battery storage for each building. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. Burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. I think cooking with gas should be the last thing we consider eliminating. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Pietro G. Poggi, Oakland, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Michael Garitty, Nevada City, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Roger Pritchard, Berkeley, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Ramona Evans, Long Beach, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Andrew Bartels, LOS ANGELES, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Alysa Lamb, Forestville, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. DEBORAH BURGE, Garden Valley, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. I use solar for my electric needs, have a solar water heater with electric backup, and an electric dryer. Stove will be next to go induction, then I only have my heater on gas. That's on a 1941 building. Why should new buildings still use fossil fuels that cause harmful air pollution inside and out? The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Oliver Vogel, Palo Alto, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Mary Sullivan, Huntington Beach, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Joseph Porterfield, Carmichael, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Melissa Evask, Eureka, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. —Ms. Lesle Helgason, Pebble Beach, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms Christine DeVries, Carpinteria, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Andy Tomsky, San Marcos, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Y. ARMANDO NIETO, OAKLAND, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Lili Flanders, Los Angeles, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. We have so much sunshine it makes sense to utilize it to the greatest extent possible. Using some of the budget surplus to encourage commercial property owners to put solar on their buildings and over their parking lots. Granting leases for roadway easements so solar panels can be installed there. Covering aqueducts with solar panels reduces evaporation while plowing the state. We have the opportunity now to do so much more!!! The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Karla Campbell, EL DORADO HLS, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Miss Penny Porter, San Francisco, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. —Ms. Erica Hawley, Bolinas, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The core conclusion of essentially every major independent study on the subject of climate change — including the comprehensive review by the world's leading scientists signed off on line-by-line by most major governments — is that making the change to clean sources of energy would have a very positive impact on economic growth. That means far more new jobs than anything the fossil fuel industry could ever create. Everything to the contrary is a lie. We have the technology to make the change now. We only lack the leadership to make it happen. There can be no question that the clean energy revolution will be an economic boon. Already clean and renewable energy is cheaper than the competition in many places in the world, and soon it will be cheaper everywhere. The sooner we transition to clean energy sources, the better for both the economy and every living thing on Earth. Climate change is now unstoppable and strong leadership to is needed to prepare us for the worst. Thank you so much for your time.

—Mr. Thomas Anderson, Huntington Beach, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. —Mrs. Nicki Elliott, Martinez, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Jim Fithian, Pacifica, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. —Mr. Cody Mitcheltree, San Francisco, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. Moving away from fossil fuels and toward clean energy options is no longer a choice. Fossil fuels must go. It is imperative that we address climate change. Our present and future generations demand it! While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time. Thank you.

—Mr. Thomas Pilla, Los Angeles, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. —Ms Thea Doty, Sebastopol, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Andrew Philpot, Solvang, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. —Mr. Dana May, Garden Grove, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. Sam Naifeh, San Mateo, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Chris Koury, San Diego, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Carter Morgan, Goleta, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms Diane Barbera, Sonoma, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, more needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. Burning gas for heat and hot water in homes and buildings causes more climate pollution. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Sherry Gong, Union City, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Miss Nancy Havell, Santa Rosa, CA

Dear California Energy Commission: I'm writing to support your draft buildings energy code. While this plan is a step in the right direction, it stops short of requiring all-electric construction. To address the climate crisis and an eventual transition to an 100% clean energy economy, California must move towards a future where all new buildings employ electricity instead of fossil gas for heat and hot water. Thank you so much for your time.

—Mr. Charles Collins, Sebastopol, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. Kevin Kevin O'Brien, Laguna Beach, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. I HOPE YOU FIND WELL INFORMED SUPPORTERS AMONG YOUR POLITICAL COLLEAGUES. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. —Jacob Marroquin, Bakersfield, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Miss Megan Friend, Pasadena, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Michael Lueras, Santa Monica, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Jo Ellen Young, Culver City, CA

California Energy Commission: California likes to pretend that we take the lead in combating climate change. We talk a good talk, but when it comes time to put our money where our mouth is: not so much. Kinda hypocritical to say we're gonna fight climate change, and do absolutely nothing to actually do it. That's why I support the NRDC's petition that follows: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. —Ms. Dori Kaplan, Alturas, CA

Dear California Energy Commission, our situation here in fCalifornia needs to remain the same until our politicians have the fortitude to get our zero point energy that's available and free. No buying solar power or any of this other garbage you want us stuff down our throat's. The zero point energy is what we need and it is a free energy so do your work and get that. Thank you so much for your time.

—Patricia Fearing, Oceanside, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. —Ms. Melody O'Neill, San Bernardino, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr Jonathan Sampson, Santa Rosa, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. David Griffith, Rancho Cucamonga, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Antoinette Perry, Altadena, CA

—Dr. Joan Anderson, San Diego, CA

—Dr. Joan Anderson, San Diego, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Sharon Miller, Oxnard, CA

Dear California Energy Commission: It used to be the smog. We did a pretty good job getting rid of the worst smog. But now its wildfires and drought. As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. This plan is a step in the right direction, but it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings asap. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water causes 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. Use your leadership power to transition to an 100% clean energy economy, and protect public health. Thank you so much for your time.

—Ms. Diana Shaw, Santa Clarita, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. —Mrs Susie Lee, Fullerton, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Cheryl L. Elkins, San Diego, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Miss Carla Haim, San Bernardino, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Barbara Dover, Brentwood, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms JoAnne Jacobs, San Francisco, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. Support clean electricity and healthier homes for all! The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. James Olson-Lee, Sacramento, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Patricia Snyder, Lone Pine, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Robert Rank, Sacramento, CA

Dear California Energy Commission: As a Californian, facing water rationing, creating defensible space around my home, having a wildfire emergency pack sitting next to my front door, uncomfortable planning a trip to Yosemite for fear of getting caught in the middle of a wildfire... and the list goes on. Our climate crisis is just that, a crisis and it needs to be addressed accordingly. As we all know, one major contributor to GHG in our atmosphere is our built environment... our houses and commercial buildings. Calling for all electric new construction only reaches a small fraction of the source of this problem. Existing homes will continue spewing pollution and climate warming gases into the atmosphere for decades. Given the nature of our situation, we should also be calling for all electric for any major reconstruction (50% or more of footprint) as well as the replacement of any gas appliance at its end of life. These are obvious requirements that our Title 24 code should include. Anything less is unconscionable for an entity charged with "ensuring the fifth largest economy in the world continues to thrive." We will not be thriving if we do less than this. Please do the right thing in 2022... do not wait for the next cycle. The number of buildings that will be remodeled in those 3 years, replaced with gas appliances will not get us to our state's climate goals. With respect, Ellyn Jacobs Dooley

—Mrs. Ellyn Dooley, San Carlos, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. Tom Johnson, Emerald Hills, CA, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Suzanne Menne, Camarillo, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. —Ms. Priscilla Peters, Turlock, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Ralph Delfino, McKinleyville, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. —Mr. Steven C Kassel, Santa Clarita, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Faye Soares, Pollock Pines, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for gas infrastructure, save residents money on utility bills, and create new jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity. Gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To protect public health, California must move towards a future where all buildings are powered by solar, wind, and tidal electricity instead. Thank you.

—Mr. Siddharth Mehrotra, Camarillo, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. William Briggs, Hermosa Beach, CA

In Northern California, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code with a few changes: --require all-electric construction for all new buildings --require individual electric meters for all units in multiple housing, like apartments --consider builder suggestions of alternates that are not fossil fuel based (Europe has been the leader in creative solutions) To address the climate crisis and protect public health, California must transition to a 100% clean energy economy as quickly as possible. Let California be an energy transition leader. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve.

—Ms. Chris OMeara Dietrich, Campbell, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Robert Schleifer, Ventura, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr Chris Berens, Fullerton, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Janice Flatto, Santa Rosa, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Michelle Nihonyanagi, Merced, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. I am told that gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and is more dangerous in terms of nitrogen oxide air pollution than all power plants in the state combined. California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you for your time.

—Linda Johnson, Mountain View, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Jason Fish, Fair Oaks, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Eric Pickering, Roseville, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Christine Scott, Novato, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Heide Hennen, San Mateo, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Tami McCready, Simi Valley, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. —Ms. Nan Ayers, Richmond, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Kristin Niswonger, Bakersfield, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time. #ClimateCrisis Climate Emergency #BlackLivesMatter [Disclosure: I am an old white man] #ClimateCrisis Climate Emergency #SaveTheBees #FridaysForFuture Learn to Call BULLSHIT on Climate Change Deniers #ActOnClimate #LegalizeIt #WealthTax #NetNeutrality #SaveTheNet #StayAtHome #PeoplesVaccine #PardonSnowden #NoBanAct #StopTheBans #BansOffMyBody #ENOUGH #ThisIsMyLane #BelieveSurvivors #BlackLivesMatter #CancelStudentDebt #ImpeachKavanaugh #IMPOTUS2 #TRE45ON #MoscowMitch #LeningradLindsay #CancunCruz Say "No" to NAZIS! ☐☐☐

The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Jennifer Tomassi, Los Angeles, CA

Dear California Energy Commission: First I want to thank you for all the work you do & I can appreciate that creating building energy codes & changing infrastructure is easier said than done. That said, I very much support your draft buildings energy code. However, while this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, it's important to move toward a future where all new buildings are powered by clean electricity instead of fossil gas. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve.

—Ms. Bridget Hanley, San Diego, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Charlie Nelson, Shasta Lake City, CA

Dear California Energy Commission: NO MORE DIRTY FUEL!! As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Protect All Things Wild & Wonderful, San Diego, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Lily Wildman, South Pasadena, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. —Mr. Gary Bea, Sunnyvale, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. David A. Smith, Irvine, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Miss Danielle K, El Dorado Hills, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. Robert Sharp, Belmont, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Susanna Marshland, Kensington, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Linda Davis, Santa Monica, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Neil Andrew Vaughn, Oakhurst, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Jim Szewczak, Redwood City, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms Nedra Robins, Escondido, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Miss Stephanie Nunez, Van Nuys, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Laura Thomas, Oakland, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Chris Dawson, Playa Del Rey, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Kimberly McCullough, San Jose, CA

Dear California Energy Commission: I'm deeply concerned that Californians like me are already suffering badly from climate change. We're suffering from extreme heat, increasing droughts and wildfires, water concerns and health impacts. We can't afford to delay every action we can take to drastically reduce our greenhouse gas emissions. So I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. We need a much more aggressive acceleration to 100% clean electricity for all new buildings right now. We also need to roll out an ambitious new standards to convert existing buildings from gas to electricity. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings as well as existing buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Rosalind Helfand, Los Angeles, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms Kerstin H. Hagstrom Bromander, Concord, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Suzanne a'Becket, Cupertino, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. David Cotner, Ventura, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. —Mr David MacMurray, Tujunga, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Cameron Barfield, San Jose, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Mary Cope, Santa Cruz, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. —Mr. Ron Delia, Whittier, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Tanya Pouls, Santa Cruz, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Melinda Benedek, Los Angeles, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. —Mrs. Angeles Manzo, San Pedro, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Karren C. Jackson, Granada Hills, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. O'Neill D. Louchard, Visalia, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Dorothy Robinson, Dessert Hot Springs, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Shannon Donnelly, Chico, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Shelly M, Chino Hills, CA

Dear California Energy Commission: In an era in which the impacts of climate change are becoming increasingly apparent and dangerous, it is essential that decision-makers do everything possible to mitigate these impacts. Failure to do so now will have major health and economic impacts in the future. I am writing therefore in support of the draft buildings energy code. This would encourage construction of healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Suzanne Levesque, Mission Viejo, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Lisa Willinger, Oak Park, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Dawn Alexandra, Redding, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. David Hall, Oceanside, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Sue O'Malley, Carlsbad, CA

Dear California Energy Commission: As a native Californian, I've seen the impacts of climate change over my lifetime firsthand and I'm writing to support your draft buildings energy code! This particular draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality where we retreat during fire season and poor air quality days in our Los Angeles area, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money \$\$ on utility bills, and create new clean energy jobs—something we tend to forget as a critical part of protecting Californians who are already suffering from this pandemic. While this plan is a step in the right direction, it does stop short of requiring all-electric construction. More definitely needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. Using gas appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. Please help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Kat Tatsumi,

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Mary Benedict, San Diego, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Jonathan Colmenares, San Francisco, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Holly Lopez, Sherman Oaks, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. —Ms. Arpi Keshishian, Glendale, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Most people don't realize the more serious result of using gas, as it comes with methane pollution. Unless the gas is captured or recycled, its release is 35-100x more impactful to our upper atmospheres than carbon. Also, any product using CFCs should be lined or replaced in the product line, as it eats away the ozone at 100,000x the rate up in high, rather than down at sea level. Grey water use from showers, tubs and washer to toilet or landscape would be an improvement also. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Jeannine Jacobs, Cambria, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. —Ms. Robin Karp, San Diego, CA

Dear California Energy Commission: We are already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Karlen Harmison, Sacramento, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Julian Yerena Jr Jr, Parlier, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Kay Gallin, Los Angeles, CA

Dear California Energy Commission: Our great state has lead the way for cleaner air regulations and climate change considerations. As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Colleen Kandus, Temecula, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Connie Luder, Sierra Madre, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time and God Bless you always.

—Joshua Stewart, Antioch, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. Ralph Purdy, Novato, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Carol Vollen, Burlingame, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. —Mr. James Castaneda, San Diego, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mx. Razel Galvan, Daly City, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Jennifer Baxter, Pomona, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Bryan Barnhart, Davis, CA

Dear California Energy Commission: I have invested tens of thousands of dollars in rooftop solar and BEVs, doing my part to curb climate change and pollution. Please use your agency and powers to continue making California a leader in positive changes toward a renewable energy future. As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Also, the public utility companies cannot be allowed to hamstring solar rooftop with exorbitant fees and policies while selling the energy created by private homeowners at a profit. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. Kirk Glaser, Santa Cruz, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. —Dr. Ana Millaruelo, Tujunga, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Miss Neela Patne, San Diego, CA

Dear California Energy Commission: As a Californian, I already see the impacts of climate change firsthand — so I'm writing to support your draft building's energy code. The draft buildings' energy code would encourage healthier, more climate-friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and contributes to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings cause more climate pollution and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to a 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy, clean energy future we need and deserve. Thank you so much for your time.

—Mr. John Donlin, La Canada Flintridge, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Linda Meneken, Concord, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Amanda Martin, Sherman Oaks, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Reed Fenton, Lake Balboa, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Linda Charter, Ventura, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. This doesn't even include those state agencies that are suppose to regulate clean energy. What about the Air Resources Board. What are they doing to encourage clean fuel for cargo ships, which burn really dirty fuel. Our dollars spent toward sustaining various agencies just seem to be paying for cushy retirements for those at the top.

—Madalaine Jong, Sacramento, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Jeanie Lowe, Santa Maria, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Roberta Reed, Huntington Beach, CA

Dear California Energy Commission: As a native, third-generation Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Karen Drellich, Lafayette, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. We can also give rebates on smaller level solar power construction as this can reduce power loads quickly (has in other countries). While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Karin Uphoff, Mendocino, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand —I DO support your draft buildings energy code. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and contributes to the climate crisis To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California MUST move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Jerri L. Miller, North Hollywood, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms L. Diaz, San Francisco, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Roberta Shirley, Ojai, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Jason Jungreis, SAN FRANCISCO, CA

Dear California Energy Commission: It is high time that California behaved like a sustainable culture. We must shift to renewable energy and lead this world out of climate chaos. Anything short of this is simply being part of the problem. As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Drew Cady, Del Mar, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Debbie Stoner, Sebastopol, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Shireen Nickel, Weed, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. jacqueline kramer, sonoma, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr Jeffery Dorer, Los Angeles, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Jason Ruben, Mill Valley, CA

Dear California Energy Commission: As a Californian, I'm seeing the destructive impacts of climate change firsthand, including riding out an early heatwave this week. So I'm writing to support your draft energy code for buildings. I believe that we must construct all new buildings to use only (clean-sourced) electricity, without the use of natural gas. (My husband and I will change out our gas furnace and gas range for electric ones as soon as they break down—maybe sooner.) The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Betsy Darr, San Francisco, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Gerald Shaia, Sun Valley, CA

Dear California Energy Commission: It is past time to cease connecting new buildings to natural gas. With our climate warming at an alarming rate, we need to be decommissioning our oil and gas production as we reduce our consumption of fossil fuels. A simple step is to require all new building in California to be electric. Why would we install the additional capital expenditure of adding gas lines when the asset should be abandoned within twenty years to meet climate goals. Further, the user would be burdened with an ever-increasing gas utility cost as the state reduces gas consumptions -- leaving the remaining users with a higher burden of fixed costs being transferred to the decreasing gas users. As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. Steven Colome, Newport Beach, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Paul Lapidus, Aromas, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. Stephen Rosenblum, Palo Alto, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Sue King, Pleasanton, CA

Dear California Energy Commission: As a retired mechanical engineer, I am very familiar with the use of fossil fuels and the severe life-shortening effects they cause. As a retired US Air Force officer, I have traveled to 33 foreign countries; I lived and worked in three of them. As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—John Evans, Walnut Creek, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. —Ms. Rachel Kelley, Santa Monica, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Sharon Bunch, Piedmont, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Tammy Button, Albany, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Kenneth Wächter, Burlingame, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand – so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate-friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it, however, stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Climate degradation is accelerating – a threat to all of us! Powering our homes and buildings with dirty fossil fuels impacts our health, and it is contributing to the climate crisis. Gas-fired appliances, and burning gas for heat and hot water in homes and buildings, causes more climate pollution, and emits 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to a 100% clean energy economy, and protect public health, California MUST move towards a future where all new buildings are powered by clean electricity instead of fossil fuel gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you most sincerely for your kind attention.

—Michael Bechard, Beverly Hills, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—DR Sandra Levine, Md, San Rafael, CA

Dear California Energy Commission: I am aware of the climate changes here in California and, as a consequence of that knowledge, I purchased an electric car. I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. I know that even small changes are important. In addition to my electric car, I try to minimize my electricity usage when possible. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. Transportation can also play an important role in reducing the impact of our energy use on the climate. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time and efforts.

—Ms. Susan Floore, San Francisco, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Kevin Boner, San Diego, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Michael Zagaris, San Francisco, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. THIS IS A GOOD FIRST STEP, BUT GIVEN THE DIRE CLIMATE CRISIS, REQUIRING ELECTRIC FOR 100% NEW CONSTRUCTION IS THE MORE RESPONSIBLE WAY TO GO. WE HAVE SO LITTLE TIME REMAINING TO KEEP EARTH HABITABLE. PUBLIC HEALTH WILL ALSO BE PROTECTED BY ELIMINATING GAS USE IN NEW CONSTRUCTION. PLEASE TAKE BOLD STEPS AND SEND A MESSAGE TO THE REST OF OUR COUNTRY. OUR EARTH IS WORTH SAVING! Laurie Fisher, San Diego

—Mrs. Laurie Fisher, San Diego, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. I fear the effect of current policies on our health and worry that our futures have been truncated. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. Alexandra Crisafulli, Berkeley, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. —Dr. Stephanie Jed, San Diego, CA

Dear California Energy Commission: The Golden State has been an environmental leader and our example offers a path to preservation. In order to mitigate the extreme weather events prompted by pollution-fueled Climate Chaos, California, the US and the rest of the world needs to rapidly end reliance on dirty carbon-based energy and transition to homes and lifestyles that depend on clean, reliable, renewable energy sources. As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. —Mr. Kevin Le, Winnetka, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Brian Shiers, Studio City, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Bea J. Linn, Hayward, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. George Lewis, Los Osos, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. Boost use of solar and renewable energy technologies that are least harmful to the environment. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. We must avoid technology alternatives that are dirty and equally polluting. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Connie Arnold, Elk Grove, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms Janice Ross, Long Beach, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. michele stewart, San Diego, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. William Lawrence, Duarte, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. And powering up dangerous, expensive and carbon emitting nuclear power plants is a mistake, as well. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Pam Nelson, Warner Spgs, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Louis Priven, Los Angeles, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. M.K. Russell, Mill Valley, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Alice Shaw, Irvine, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Stephen E. Fowler, Simi Valley, CA

Dear California Energy Commission: It is a radical thing, to plan for all-electric new construction. But it is radically easier than not changing our habits and our new construction. Please support and strengthen the draft buildings energy code. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Kathlyn Pihl, El Cerrito, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. —Alfredoangelo Castillo, Los Angeles, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. Ok, that sounds great! The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Hmmmmm... I always thought that electricity was more expensive than gas... does this mean in homes that already have gas? Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Michelle Angelini, East Hollywood, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms Phyllis S.Benham, Mammoth Lakes, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr John Wozniak, MENDOCINO, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs Ann Marie Meyer, Pacific Grove, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Peter Leighton, Los Angeles, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Bonnie DeClark, San Rafael, CA

Dear California Energy Commission: As a Marin County resident, I have been grateful to have access to greener sources of electricity and that my county is actively moving away from fossil fuels. I have been teaching for many years and my students regularly ask why adults are not doing more to move away from fossil fuels and limit the great difficulties these children will live with in the future because of climate change. So what are we going to do about it, I ask you? As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Ayesha Ercelawn, Fairfax, CA

Dear California Energy Commission: As a Californian, in kings county. I'm DONE! YA HEAR!? DOOOONE!! SICK OF all this! Its 112° Its over. Ur gig is up! Im already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Joshua Gonzales, Kingsburg, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Stephanie Snyder, Redondo Beach, CA

Dear California Energy Commission: I agree with the below letter. New construction - absolutely has to meet these guidelines. Established construction should be offered incentives to make the change. Impoverished areas that would be hard pressed to make the change even with incentives may need to be subsidized. We have to go all of the way. Thank you for your efforts and consideration. As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Bonnie Jene Pannell, Crockett, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. —Dr. Eileen Chieco, Oakland, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Maggie Hughes, Berkeley, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Dale Reynolds, Glendale, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Emma Javaherian, La Mesa, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Larry Lerner, Newport Beach, CA

Dear California Energy Commission: The drought in California and the climate situation around the world, requires drastic action. As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Stephanie Colshan, Santa Ana, CA

Dear California Energy Commission: The following represents my position in support of healthier, more climate-friendly buildings in California. As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Deborah Filipelli, PhD, the sea ranch, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Lynn Pedersen, Porter Ranch, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. —Mr. Gabriel Wolff, Santa Cruz, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Miss Isabelle Farrand, Woodland, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Barbara Bennigson, Palo Alto, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. —Mrs. M. Laura Gulovsen, Ventura, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Vivienne Orgel, Santa Cruz, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. Marion Schulman, L.A., CA

Dear California Energy Commission: Urgent As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time. Long overdue!! Do not be dissuaded by selfish special interests and their greed and lies. Thank you Dr. J Kirschenstein

—Joel Kirschenstein, Westlake Village, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—M. D. Block, La Jolla, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Jennifer Hennig, Builder Creek, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Tarun Bishop, San Diego, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Lee More, Santa Cruz, CA

Dear California Energy Commission: As a Californian, I support your draft buildings energy code, but it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels is a thing of the past. We need to transition to an 100% clean energy economy. Thank you.

—Mr. Stevan Bosanac, Petaluma, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Kathleen Tyson, Riverside, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Martha Mamula, San Jose, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Jean M MacCuaig, Villemomble, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Stephan Foley, Ojai, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Janice Sampson, Long Beach, CA

Dear California Energy Commission: As a Californian and former Tennessean, with a home also in Idaho and family in FL, NC, PA, OH, I've been seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. At significant impact financially to me (I am still paying off loans), I put a new "cool roof" and solar panels on my home in 2015 because it was the RIGHT thing to do. I am glad I was among those to lead the way. I also bought a Prius in 2006 which I still drive - I love it! I also take BART A LOT Instead of driving. I have saved lots of fossil fuels in these 15 years. But we all need to do more and we need your leadership. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. This is an urgent problem to solve. it is affecting ALL of us TODAY - not some time in the "distant" future. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Natalie Shuttleworth, San Francisco, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. —Ms. Jean Varda, Grass Valley, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Rhea Damon, Calabasas, CA

Dear California Energy Commission: I care deeply about combatting climate change, and feel strongly that California should be a leader in doing so, with "electrification of everything" being our greatest tool in this fight. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. James Higbie, San Mateo, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Cindy Belleau, Forestville, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Marina Thompson, Eagle Rock, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr Mel Mackler, San Diego, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Leonardo Nunez, Lompoc, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. As a renewable energy entrepreneur and real estate developer who has and is building the first all-electric multifamily developments in Oakland and Berkeley, and has successfully leased up the one in Oakland as missing middle housing, I can tell you from my own personal experience that this is an imminently feasible goal and there is no need to wait. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Heidi Lubin, Oakland, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Daniel Szymanowski, La Mesa, CA

Dear California Energy Commission: This is the change we need. As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Kristin C Biechler, Castro Valley, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Matt Walraven, Petaluma, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. Toby Gottfried, Orinda, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Julie Roberts, Santa Barbara, CA

Dear California Energy Commission: As a Californian, I'm already experiencing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. Please move to commit to policy that requires all new buildings to be powered electrically rather than by fossil fuels. Thank you so much for your time.

—Mr. Terence Craig, San Francisco, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Rena Zaman-Zade, Escondido, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Allysa Shim, Anaheim, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—David Weinstein, Santa Monica, CA

Dear California Energy Commission: The draft buildings energy code is a positive step in addressing climate change and indoor air pollution, but should be strengthened to require that all new buildings use only electricity from renewable sources. Powering our homes and buildings with dirty fossil fuels is harmful to public health and continues the environmental devastation of fossil fuel extraction. Gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. Full electrification of buildings creates more job opportunities that don't expose workers to the toxins in fossil fuels. CA's transition to 100% renewably-sourced electricity must be accelerated, given the scale of the climate crisis. 100% electrification of new buildings is a crucial component of that transition.

—Ms. Alice Nguyen, San Jose, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Charles Langelier, Pacifica, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. —Ms. Judith Davies, Santa Monica, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Bruce Zutavern, Ontario, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Paul Edelman, Woodland Hills, CA

Dear California Energy Commission: As a Californian, I'm currently experiencing the impacts of climate change firsthand with heatwaves like never before, drought, and a fire season that comes earlier every year. I drove down the highway just this week and saw power lines blowing out of control in a wind tunnel region that's getting worse and recalled that being the cause of some of the fires last year, only to come across a fire along that same highway literally 10 minutes down the road. We have to make any and all the changes and improvements that we can as soon as possible. So I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Laura Ramirez, Benicia, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mx. Alejandra Bellavance, Morgan Hill, CA

Dear California Energy Commission: We do not need more pollution in this state. There are many options that also provide jobs and can save users, such as myself, money. As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.
