Docket Number: 21-BSTD-01*

**This document supersedes the TN# 238423 - Comments by 3,345 NRDC activists in support of fossil fuel-free building codes**

This document supersedes the TN# 238423

Dear California Energy Commission:

Please accept these 3,345 public comments from members and online activists of the Natural Resources Defense Council (NRDC), on your draft buildings energy code.

The draft buildings energy code would encourage healthier, more climate-friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs.

While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible.

Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis.

And gas-fired appliances and burning gas for heat and hot water in homes and buildings cause more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined.

To address the climate crisis, transition to a 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water.

The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

*Additional submitted attachment is included below.*

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Carol DAVIS, San Rafael, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Rachel Loui, Mountain View, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Michael Friedman, El Sobrante, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Joe Zaremski, Santa Barbara, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Jill Rake, Santa Rosa, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Charles Byrne, San Francisco, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. JOHN MAYBURY, Moss Beach, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Christa Laib, Berkeley, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Rex Sanford, Modesto, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Rachelle Cox, Costa Mesa, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Hillary Ostrow, Encino, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. —Mrs Jennifer Bradford, Spring Valley, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Jack Milton, Davis, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. Alicia Page, Newbury Park, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Rev Kathleen Ford, Burbank, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Ann Graves, San Leandro, CA

Dear California Energy Commission: I'm writing to endorse your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. We also need tax credits or other financial incentives to encourage businesses and home owners to convert existing natural gas cooktops, water heaters, and furnaces to electric power. Thank you so much for your time.

—Mr. Jay Atkinson and Ariel Summerlin, El Sobrante, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Jason Li, Cupertino, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Matthew Page, Newbury Park, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. William Kwok, Sunnyvale, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Carol Savary, San Francisco, CA

Dear California Energy Commission: As a grandmother and a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. Linda Fidell, Morro Bay, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Sharon Bunch, Piedmont, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. I'm a senior citizen in Marin County facing a summer & fall of increased fire danger & threats by PG&E to again cut off our electricity in response. I hear almost daily PG&E ads on KQED to be prepared to evacuate if needed. I'm a retired biologist [PhD] & know that climate change is occurring, an increasing threat [raised summer temperatures, CA drought], and primarily caused by fossil fuel use. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. Anne Cohen, San Rafael, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you in advance for all you do each and everyday.

—Ms. Donna Beal, Del Mar, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. KATHARINE GREENEBAUM, TARZANA, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Gregory Tabat, Santa Ana, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Charesa Harper, Napa, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Katherine Silvey, Martinez, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Candace Rocha, Los Angeles, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code, which is badly needed. The draft buildings energy code should encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs, and ultimately a better CA and a healthier environment. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. This is totally unnecessary. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. Some of us are doing what we can to further this future on our own. We have changed our gas stove and heating to an electric stove and heat pump. We added solar panels, and just completed a landscaping project to be drought tolerant. Not all CA residents can do this, so please help CA along to a healthier future with new regulations that realize a better future for all Californians. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Gary W Kelly, Salinas, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. Lori Dick, Claremont, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. —Mr. Dennis Dougherty, San Rafael, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Doug Evans, Ojai, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Jill B., San Francisco, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms Jane Lazar, Berkeley, CA

Dear California Energy Commission: I need your help! As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Marie Evitt, Mountain View, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Irene Lopez, San Diego, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Randi Glick, Santa Barbara, CA

Dear California Energy Commission: As a Californian, we are already seeing the dramatic impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. California has always led the way in positive directions. We need to continue to do so. Thank you much for your time.

—Dr. Michele Reed, Templeton, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Olga Correa, Alhambra, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. richard saltsman, Los Angeles, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Chris Ashton, San Diego, CA

Dear California Energy Commission: California must move towards a future where all new buildings are powered by clean electricity produced by renewable solar and wind energy instead of fossil fuels for heat and hot water. As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Andrea Graff, San Francisco, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. —Dr. Sheri Opp, Sacramento, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Bee Mittermiller, La Jolla, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Arian Monem, Carmichael, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Janice Carr, Los Altos, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. As you are aware, the action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Rosalba Cofer, Galt, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Margaret Rogers, Redwood City, CA

Dear California Energy Commission: As a Californian living near a forest, and having had several years in a row of orange skies and unbreathable air at the end of the dry season (which keeps getting drier and longer), I'm quite troubled by the impacts of climate change. I'm writing to support your draft buildings energy code. This plan is an excellent step in the right direction. Thank you. Even more visionary would be to require all-electric construction, and set a reasonable timeline for the state's transition to 100% clean electricity for all new buildings. By reasonable I don't mean good for the environment - all that needed to happen yesterday, but reasonably structured to allow industry to adjust. It's time we don't really have, and to not define a timeline for a complete transition away from fossil fuels sends the wrong message about the state's commitment to fighting climate change. Let's work together to set an example for the rest of the world, as California always has, and help the planet find its way back to a more sustainable climate, so that our kids (your kids) actually have a place to live tomorrow. Thank you for your plan and please consider enforcing a timeline for a complete transition to all-electric, next-zero, clean-powered buildings and industry.

—Dr. Laurent Liscia, El Sobrante, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. Steven Holzberg, FAIR OAKS, CA

Dear California Energy Commission: I strongly support climate friendly buildings. That can begin with requiring new construction to be all-electric. As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Nancy Hiestand, Davis, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. David DeWitt, Sacramento, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Caleb Ellis, Los Angeles, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Mario Guzman, San Jose, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Rachel Abbott, San Diego, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Janet Harding, Los Altos, CA

Dear California Energy Commission: I support this. I would VERY STRONGLY support this if CA would also get rid of, or at least aggressively prosecute the criminal enterprise known as PG&E, its leaders and it's unindicted co-conspirators at the corrupt PUC. Until you put some of these criminals in prison, their misdeeds will continue to subvert clean energy and will be destructive to CA's best interests. -pr As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. CC Camamile, Ventura, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs Rosiris Paniagua, Altadena, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Steven Aderhold, Fallbrook, CA

Dear California Energy Commission: As a life-long native Californian, I'm already seeing the impacts of climate change firsthand, so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. I have never liked gas appliances, and I have even bought electric appliances to use instead of gas appliances provided in apartments. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible, and older/current buildings should be transitioned to 100% electricity as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. Gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Christina Williams, Los Angeles, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. A. Srinivasan, Altadena, CA

Dear California Energy Commission: I'm writing to support your draft buildings energy code which, as I understand it, would encourage renewable energy sources, improve air quality, reduce the need for dangerous gas infrastructure, reduce utility bills, and create new clean-energy jobs. This would be a good step toward our state's transition to 100% clean electricity for all new buildings as soon as possible. Using fossil fuels impacts our health and contributes to the climate crisis. Transition to an 100% clean energy economy requires that California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you!!

—Lynn Williams, Ukiah, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. Eric Kraft, Los Angeles, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Sandy Williams, Covina, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Carlo Calabi, Angwin, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. carole saville, Kensington, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Shelly Howell, Pleasanton, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Brian Rutkin, Culver City, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Madeline Wright, Los Angeles, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Miss Jessica M Saavedra, Tustin, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr Gerald Paone, Chatsworth, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Charles Seiter, Pleasanton, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Marilyn Warmee, Yuba City, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. We owe it to those who come after us! The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Petr Krysl, La Jolla, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Denisse Chavez, San Diego, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. Charles Tribbey, Pismo Beach, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Sharon L. MATTERN, Palm Desert, CA

Dear California Energy Commission: I don't know why doing the right thing is so difficult and is taking so long! The first Earth Day, celebrated around the world was April 22, 1970. People everywhere finally realized what harm was being done to the Earth through careless human and corporate behavior. As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. Solar could have already been installed on every California roof, except for our government's protection of Dirty Energy. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Barbara Epstein, Redondo Beach, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to almost 100% clean electricity for all new buildings as soon as possible. I am a strong proponent of gas cooking (stove top), but am supportive of a transition of all other gas uses (such as ovens, heating & hot water) to efficient renewable electricity. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an almost 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr Howard Cohen, Palo Alto, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Theodore C. Snyder, Granada Hills, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Ronald Harder, Los Gatos, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Gavrilah Wells, San Francisco, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr Matthew Walker, Encinitas, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Carol Cook, San Mateo, CA

Dear California Energy Commission: As a Californian, and an environmental quality commissioner. I see the need to immediately pivot away from new gas installations in order to have hope for meeting the Paris accord 2 degree damage limits. You and I both know that more gas assets are a mistake that strands society's assets into polluting technologies that have to be expensively undone. You have the power and the responsibility to pivot away from gas in this code cycle and make it all electric. That is what the IPCC meant when they said we needed to change in ways that were: Rapid Far Reaching and Unprecedented. Please make our lives easier at the local levels by standing up for all electric new construction right now in this code cycle, so we don't strand billions of dollars in wasted assets, expensive retrofits and otherwise not needed added carbon capture and sequestration beyond what we have to do. Thank you for considering the advice from my long career as an environmental engineer. -Tom Kabat Menlo Park, CA

—Mr. Tom Kabat, Menlo Park, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Julie Jehly, Rohnert Park, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr Howard Whitaker, Gold River, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Barbara J. Brown, Rancho Santa Fe, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Earl w. Balch, San Diego, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Judith Baxtermaciejewski, Yorba Linda, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Gerry Williams, Thousand Oaks, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. As a person with horrendous asthma, severe allergies and very sensitive to air quality, I urge you to create healthier, energy efficient buildings. I once worked in an office that was quite old with very poor air circulation and developed pneumonia as did another colleague. Unlike me, my colleague had pristine health, ran marathons and in her early 30's. It turns out air we were breathing was significantly unhealthy. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Margaret Roth, Redwood City, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. —Mr. Steve Robey, Berkeley, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Dan Abrams, Venice, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Howard Holko, San Anselmo, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Fiona E. Nolan, San Rafael, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Jesse Goldstein, Redwood City, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Gaille Heidemann, Los Angeles, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mx. Joseph LeBlanc, Sebastopol, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Jesus Hernandez, Santa Rosa, CA

Dear California Energy Commission: As a Californian, I support your draft buildings energy code since the use of fossil gas causes more climate pollution and 7 times the nitrogen oxide air pollution than all in-state power plants. However, more needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. California must move towards an energy code where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. Thank you for the current plan and please improve it so all Californians can benefit from more climate-friendly buildings. Thank you for your consideration,

—Ms. Grace Silva, North Hollywood, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Silamith Maclean, Toluca Lake, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Miss MaryFrances Careccia, los angeles, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. AS A RETIRED MEDICAL PROFESSIONAL, I AM MORE THAN AWARE OF THE COST OF POLLUTION TO PUBLIC AND PLANETARY HEALTH. AT THIS POINT IN TIME AND, IN FACT DECADES AGO, THIS WAS A KNOWN ENTITY AND YET CORPORATE AMERICA AND "TRADITIONAL" ACTIVITIES HAVE BEEN TOLERATED, NOT ADDRESSED AND NOW WE ARE IN A RACE TO PREVENT THIS PLANET, OUR HOME AND LIFE-LINE, FROM BECOMING A PLACE THAT FUTURE GENERATIONS WILL BE UNABLE TO LIVE ON DUE TO OUR FAILURES WHICH HAVE BEEN IMMENSE DUE TO WORSHIP OF PROFIT AND POWER OVER FACTS! ARE WE INTELLIGENT ENOUGH TO ADDRESS THIS ISSUE NOW, TODAY, OR DOES MATERIAL PROFIT TRUMP ALL ELSE PROVING THAT MANY DO NOT BELIEVE IN A HIGHER POWER? While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Loretta Bodiford, Soulsbyville, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Paul Shimazaki, San Francisco, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. I believe clean energy is essential to mitigating the current climate crisis, and continuing to build new structures that are not powered by clean electricity is a step backwards when we have the opportunity now to create jobs, improve the health of our citizens and save residents money on their utility bills. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Please take bold action on this very important issue. Thank you so much for your time.

—Ms. Georgia Labey, Palm Desert, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Kyle Bowman, San Fernando, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Jimmie Yonemoto, San Jose, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. William Kozicki, Santa Monica, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Amanda Zangara, Sebastopol, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Marilyn Saa, North Hollywood, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Sid Shapiro, San Diego, CA

Dear California Energy Commission: As a Californian who now has a lung condition too, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. After a decade of living in the SF Bay Area, I too have reduced lung capacity and can physically feel the lung-tightening effects especially of high-pollution days. Like many CA homes, mine has a gas wall heater, stove-oven, and dryer. Whenever possible, I used electric power instead (space heaters, microwave, line drying with electric fan) in a desperate attempt to reduce my exposure to "natural" gas, aka methane (a greenhouse gas 80+ times more powerful, over every 20-yr period, in its net effects than carbon dioxide). These are just the public-health effects in a narrow sense. Then there's global warming, leading to worse wildfires, stronger/more destructive storms, etc, which of course wreak havoc with California's economy as well as increasing disease (which in turn drags the economy down yet further). The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% CLEAN ELECTRICITY FOR ALL NEW BUILDINGS ASAP. Powering our homes and buildings with dirty fossil fuels fouls our health and revs up the climate crisis. Gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution THAN ALL power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. I so appreciate your thoughtful reading of this! and your prompt and sustained ACTION.

—Dr Katherine Ziegler, San Leandro, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Allison Blair, Mt Shasta, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Darrell Neft, Costa Mesa, CA

Dear California Energy Commission: Our California family of four adults and three smart teens has personal experience with the impacts of climate change and we are counting on you to support your draft buildings energy code. Our family's research on the draft buildings energy code leads us to understand that it would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. We also know that while this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To have a real impact on the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. Our family joins thousands of other Californians in urging you to take the most powerful action possible to help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time and service.

—Ms. R Terra Terra Williams, Grass Valley, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Andrea D. Kaufman, Guerneville, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Hope Millholland, Portola valley, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Denis Pettitt, Burbank, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Peter Schmale, Corte Madera, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Phyllis Komesor, San Marcos, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. The climate crisis is the most urgent issue of our time--nothing else will matter if we don't get ahead of this and time is running out. California government should be setting an example by promoting the use of electric energy in all new construction. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Kathy Kahn, Laguna Niguel, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Nick Freiberg, Half Moon Bay, CA

Dear California Energy Commissioners: Last night I watched the film Chasing Coral on YouTube and it was yet another wake-up call that climate change is pushing our ecosystems closer and closer to ecological collapse. We've lost 50% of our coral reefs and if we don't make rapid reductions in our carbon emissions, we are likely to lose all of the reefs within as few as 20 years. The ocean has absorbed a phenomenal amount of carbon, but it is maxed out and its ability to absorb our emissions is diminishing. And it has come at a tremendous cost to marine life. By contrast, I was delighted to read about your draft buildings energy code! These are the kinds of actions we absolutely need to be taking now. But you need to go further. I urge you consider requiring all-electric construction to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. I live in an all-electric home and have for 40 years. Our house was built when nuclear power was going to generate electricity that was "too cheap to meter". Well, obviously that didn't pan out, but I'm happy about our choice anyway. We are powered by solar, have a heat pump, an induction range, electric washer, dryer (although I usually hang dry) and water heater. We live just fine without gas and so can everyone else. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. Be bold! The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you for protecting our precious planet.

—Ms. Holly Sletteland, Templeton, CA

Greetings California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand with so many of my favorite hiking places burned and closed — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. James R. Inskip, Fremont, CA

Dear California Energy Commission: As a mom, I'm distressed that my gas stove is bringing pollution into my house. When I can afford to swap it out I will. It's time to draft building codes so that other mothers can raise their children with better air quality. We also need electric buildings in order to respond meaningfully to climate change. We're again in a drought. We will again have an epic fire season. Let's respond. Let's be smart and bold. Our kids deserve action. Thank you so much for listening to suburban moms like me.

—Ms. Sari Fordham, Riverside, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Jennifer Devine, Milpitas, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Dennis Trembly, Los Angeles, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Deb Federin, La Jolla, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr June Gordon, Sebastopol, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. —Ms. Christine Doyka, Garberville, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Annette L. Haymaker, Nevada City, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Christopher Ware, Fremont, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. But I wish it could go a bit further in the direction of all-electric construction. Change is always difficult and rapid change even more so, but for so long we have put off reducing our carbon emissions that it's now necessary to push harder for the changes needed in construction and other industries. It seems increasingly clear that we will not reduce carbon emissions enough to avoid severe impacts on our lives and life-style, but please consider what additional moves toward all-electric could be taken NOW. Thank you for your attention.

—Ms. Dorothy Gregor, Oakland, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Adrienne Micco, Vacaville, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. I have crunched the numbers for my home, and I plan to begin the process of fully electrifying. With an efficient all-electric heat pump, water heater, and clothes dryer, I will be able to eliminate the noxious and dangerous methane gas from my home. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Michael Mavrovouniotis, Irvine, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. Clyde Willson, Oakland, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Scott Amundson, Oakland, CA

Dear California Energy Commission: The draft buildings energy code should be strengthened to require 100% electrification of new buildings. Electrification of the building sector is essential to CA's transition to 100% clean energy. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis and indoor air pollution. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined.

—Mr. Du Ng, San Jose, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Jack Branson, Sacramento, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Brian Still, San Diego, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Sylvia Stachura, San Gabriel, CA

Dear California Energy Commission: Do the right thing. As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Patricia Mann, Indio, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Stephanie Jackel, Vista, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Gail Weininger, Alameda, CA

Dear California Energy Commission: We are in an existential crisis. Climate change feedback loops are accelerating faster than scientists have anticipated, and California must exert every reasonable effort to curtail lead the harmful emissions, and continue to lead the world in such endeavors. The draft buildings energy code would do good things as proposed (such as encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs), but we have run out of time for incremental mitigation. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Gregory Nelson, San Pedro, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. —Mrs. Julie Rogers, Fort Bragg, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Kathie Schenk, Simi Valley, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Mike Camp, Lodi, CA

Dear California Energy Commission - Respectfully. As a lifelong coastal northern Californian and an over four decade Rural American—one of multiple millions—no matter where Rural people stand on the political spectrum we all share common insights, sensibilities, observations and realities of daily life within the natural world that suburban and urban dwellers dismiss or have become blind to recognizing. Additionally Rural people share the consequences of suburban and urban dwelling policy makers' mandates and decisions. That said, some are welcome, such as the draft buildings energy code. As you aware, the draft buildings energy code would: . encourage healthier, climate friendly buildings . improve indoor air quality . boost energy efficiency . reduce the need for dangerous fossil fuel infrastructure . save residents money on utility bills . create new clean energy jobs I trust we'd agree: . this plan has merit . however it falls short of requiring an all-electric construction . more needs to be done to accelerate California's transition to 100% clean electricity for new construction . relying upon fossil fuels to power our homes and buildings impacts our health and the (inter)national climate crisis Please ensure California responsibly: . addresses climate crisis concerns . transitions to an 100% clean energy economy . protects public health, safety and civic-civil-human rights . creates a future where all new construction is powered by clean electricity rather than relying upon fossil fuel for heat and hot water With appreciation for your years of public service, along with your time and thoughtful consideration of this far reaching concern that effects present and future generations—including your family and descendants—historically documented for all to review. Every good intention - Rita  
—Ms Rita A, Arcata, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Rev. Bob Miller, Santa Rosa, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Kathleen Mulligan, San Dimas, CA

California Energy Commission: I support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you.

—Mr. Mark R. Bartleman, Laguna Beach, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Steve Goodman, Carmel Valley, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Susan Wright, Bakersfield, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms jesse croxton, venice, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr Eric Edmondson, Danville, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Madeleine Kirkconnell, Stockton, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. —Dr. Derrell Chambers, Kensington, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Evan Albright, San Luis Obispo, CA

Dear California Energy Commission: Now is the time to raise the standards and improve health for all those working inside. As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. David Harris, Ventura, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. D. Fachko, Buena Park, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Larry Price, Westlake Village, CA

Dear California Energy Commission: In California, we have been seeing the impacts of climate change for a number of years, so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. Your action today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you for your time.

—Ms. Sandra Garber, Petaluma, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Brendan Chan, Sacramento, CA

Dear California Energy Commission: As a long-time Southern California resident and homeowner, I am already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for taking the time to consider my comments.

—Mr. Tom M. Canning, Calabasas, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Linda Price, Santa Rosa, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. I urge you to find ways and enact legislation that will help low-income Californians purchase and retrofit all-electric homes. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Craig Drizin, Santa Cruz, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. —Mr. ben nitzan, El Granada, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. Christina Fritsch, Forestville, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Julia Ulrich, Tracy, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Judy Shively, San Diego, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Nathaniel Ramos, Watsonville, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand, so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage more climate-friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. Gas-fired appliances and heaters in homes and buildings cause more climate pollution and air pollution than all power plants in the state combined. To address the climate crisis, transition to a 100% clean energy economy, and protect public health, California must power new buildings with clean electricity. The action you take today will help ensure that California can have the clean energy future we need and deserve. Thank you so much for your time.

—Ms. Elizabeth Edinger, North Hollywood, CA

Dear California Energy Commission: Parts of our neighborhood burned and our house and two neighbors had damage, meaning I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Sharon Feissel, Santa Rosa, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Joseph Rodriguez, San Jose, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Mark Edgren, Fairfield, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr Mario E Martinez, Torrance, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. Elizabeth Bell, Santa Cruz, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. Our climate in California is in crisis, the unprecedented wildfires, the 1,200 year level drought and the pollution and dirty air that we don't have to live with, as we saw during the early pandemic shutdown. No more fossil fuel in homes, buildings, transportation and energy generation. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Tim Hayes, Pacific Palisades, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Bonnie Frost, Canoga Park, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Colleen Lobel, San Diego, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Sharon Byers, Downey, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Miss Lill D, Berkeley, CA

Dear California Energy Commission: As a retired Architect, LEED Accredited Professional, and Certified Construction Specifier in California, I have been part of many design teams that have built dozens of "green" buildings in California. I am writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. We also need incentives to encourage the transitioning of existing water heaters, furnaces, and ovens from gas-fired to electric whenever possible. The same arguments for transitioning to electric appliances in new construction also applies to existing buildings. Perhaps when a building is sold, and ownership title changes, a certain tax incentive could be applied to encourage the seller or buyer to make the transition to all-electric. Powering our homes and buildings with dirty fossil fuels impacts our health and contributes to the climate crisis. Gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. Thank you for supporting California's transition to 100% clean energy.

—Mr. William Buchholz, Berkeley, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Daniel Muhr, Goleta, CA

California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr Karl Steinberg, Newport Beach, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Richard Adhikari, San Francisco, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Judith Pelletier, Moorpark, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Tina B. Pirazzi, Long Beach, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Sarah M, San Francisco, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. M. Baca, Fremont, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Anne Lyon, Rohnert Park, CA

Dear California Energy Commission: My name is Raj Chaklashiya, and I am a graduate student from Jurupa Valley CA 91752. As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. The climate crisis has already negatively impacted my life, causing me fear and panic when wildfire smoke filled my college campus UCLA while I was attending classes back in 2018. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Raj Chaklashiya, Mira Loma, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms Joanne Snyder, San Diego, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Jerry Persky, Santa Monica, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. Every new building constructed with fossil fuel use for heating will lock in more climate changing CO2 for decades to come - at least until that heating system is replaced, if it can be replaced. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Robert Griesemer, Palo Alto, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. —Mr. Russell Burke, Guerneville, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Christopher Ward, Cool, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time. California has always been a leader in environmental improvements. We as Californians need to continue to be leaders and move away from fossil fuels all together.

—Mr. Richard Ramirez, Kings Beach, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Cheryl A. Townsend, Redondo Beach, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Marc Myers, san diego, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Ellen Haden, Pacific Palisades, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. California often leads the nation and we can do this again and again. We all need clean energy and it should be possible for us to have it now. Solar and wind are good and ocean energy is available for the state. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time. PS: We also need to conserve our meager water resources with no fracking and less sent to So CA where they use it freely while we in No. CA remain on severe water rationing for decades. Thank you

—Mrs. Carole Ehrhardt, Pebble Beach, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Patricia Lauer, Signal Hill, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Marilyn Price, Mill Valley, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Jessica Dardarian, Folsom, CA

Dear California Energy Commission: The devastating climate change impacts that are already wreaking havoc in California demand that we accelerate the transition away from fossil fuels. Powering our homes and buildings with dirty fossil fuels also impacts our health. Therefore, I am writing to urge you to strengthen your proposed buildings energy code to require all-electric construction. We are planning to replace our household gas with all-electric heat in the coming year or two, despite the substantial expense, because it is so important that we all address the climate crisis. Requiring all-electric new buildings should be a no-brainer. Thank you.

—Ms. Nancy Rader, Berkeley, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. June Yamada, Westminster, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Venedel Herbito, Los Angeles, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. Bob Kull, Taylorsville, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Kimo Cochran, Guerneville, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Zach Rasmussen, Mission Hills, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Doug Parker, Apple Valley, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Rebecca Harper, Los Angeles, CA

Dear California Energy Commission: I ask that you take action toward slowing the further destruction of our environment by supporting the NRDC by daring to take action now. As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Pamela Maxfield, Eureka, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time. WE HAVE TO DO THIS NOW BEFORE WHAT WE DO DOESN'T HELP. THE MONEY IT COSTS TO REBUILD EVERY TIME A FIRE WIPES OUT A COMMUNITY, REPEATED FLOODS DESTROY HOMES AND BUSINESSES, HURRICANES AND TORNADOES DESTROY WHATEVER IS IN THERE WAY, DROUGHTS KILL WHATEVER WE TRY TO GROW, WATER AND AIR ARE POISONED, THAT MONEY IS WASTED. THE CAUSE MUST BE CORRECTED—LIKE CANCER CAN'T GET CURED UNTIL WE FIND THE CAUSE. ITS IN THE CAUSE. PETROLEUM IS THE CANCER, NOT ANY KIND OF CURE. Penny

—Ms. Penny Hartman, Sonoma, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Bonnyq Quackenbush, Sacramento, CA

Dear California Energy Commission: Please do whatever you can to rid our state of any dependency on fossil fuels. Considering my age, I understand I won't be here to see the good results, but my great-grandchildren and their children may live in a better climate if action is taken in 2021 and immediately subsequent years. As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Denise Porter, El Sobrante, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Joan Smith, Greenbrae, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. F. Carlene Reuscher, Costa Mesa, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Ryan Schrader, Bellflower, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms Lelia Bogard, coarsegold, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Carol Lewis, SANTA CLARITA, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Melanie Zeller, Walnut, CA

Dear California Energy Commission: As a Californian, I already see the impacts of climate change firsthand. So, I write to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. But, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings. Powering our homes and buildings with dirty fossil fuels impacts our health and contributes to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. California must require that all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. Take action today to help ensure that California has a healthy clean energy future.

—Mr. Dwight Johnson, Orinda, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Robin Clark, Mission Viejo, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Gerald Orcholski, Pasadena, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Keith Coburn, Lake Forest, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Helen Manning-Brown, Atascadero, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. Fossil Fuel Use in CA Buildings is Harming Our Health and Contributing to the Climate Crisis in a BIG WAY! We need leaders who support clean electricity and healthier homes for all! The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Rev. Charlotte Bear, Ben Lomond, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Fillan Swift, Livermore, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Susan McLaughlin, Lake Forest, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Christopher Hall, Glendale, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Marjorie Shepherdson, Santa Barbara, CA

Dear California Energy Commission: As a native Californian, I'm heartbroken at the devastating impact climate change is having on our state — so I'm writing to support your draft buildings energy code. I appreciate that the draft buildings energy code would improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, and create new clean energy jobs. But while this plan is a step in the right direction, it stops short of requiring all-electric construction. Way more needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. I would also like to see some leadership around encouraging owners of existing buildings to convert to 100% electric, through means such as tax credits and (just as importantly) by educating homeowners about the dangers of indoor air pollution and good electric alternatives to the gas stove. California must move towards a future where all buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today regarding new buildings, however, is a critical first step toward ensuring that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Katherine Crocker, West Sacramento, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Alys Hay, Windsor, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Maria Molund, Los Angeles, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Judith Rogers, Richmond, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr Billy Steele, Cardiff, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Laura Strom, Los Angeles, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. Jan Gardner, Rolling Hills Estate, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Amber Riego, san diego, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr David King, LOS ANGELES, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Angela Isaacs, Albany, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. —Ms. Elaine Gaspari, San Luis Obispo, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Chris Van Beveren, Los Osos, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. Brigid Murphy, Chino, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. G Caviglia, Morgan Hill, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Jason Rosenfeld, , CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Rolf Neuschaefer, ALISO VIEJO, CA

Dear California Energy Commission: As a resident of the Central Valley of California, our temperatures get higher every year. We try to reduce our use of AC, but we are getting older too, and the heat affect us more than before! We'd like to not use freon in our AC. But this is the only AC technology that was available just a few years ago. We don't like the pollution that causes our temperatures to soar, but we need to learn about the alternatives and how we can tap into them, without going broke. As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. Please make a copy of this draft code available online too all Californians as soon as possible. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. E.A. Leone, Fresno, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. T. Chupp, Orland, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Tom M. Kunhardt, Oakland, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. David Ross, Alamo, CA

Dear California Energy Commission: I am writing in support your draft of a buildings energy code. I agree with you that we need more climate friendly buildings with better indoor air quality and energy efficiency, and that we also need to reduce the need for gas infrastructure and to reduce Californians' home utility bills. Also, because of Covid, we need to quickly generate new clean energy jobs building all-electric homes. Could this buildings energy code be altered to include a requirement for all-electric construction? As a native Californian who has lived here all of my life, I know that running homes and buildings with dirty fossil fuels heats up the earth and makes smog. Gas-fired appliances and burning gas for heat and hot water in homes is polluting, making many times more nitrogen oxide air pollution than all power plants in the state combined. My neighborhood has hotter weather, fiercer winds, and more smog than it ever did before. And wild fires in California seem to get worse every year. For the climate, we need clean energy structures. For people, we need clean energy housing that is affordable and construction jobs that are enough to live on. Gentrification is making this harder by changing the housing market. Silicon Valley has driven up the price of houses where we live so that we cannot afford to sell our home because we cannot afford to buy another one in a less expensive rural area as we have planned to do for about thirty years. This is happening all over the country, and I wonder if there might be a way to offset it in the new building code, giving jobs to people of a certain income bracket and selling homes made by those jobs to the same bracket of people. But obviously, before that economic concern is the importance of getting right at the climate crisis. I hope that you will change this code to require a transition to an 100% clean energy economy as a goal that we meet sooner rather than later. Secondly, I hope there will be a requirement for affordable, clean-powered housing for people in lower income brackets and new construction jobs building that housing. Thank you for the code as it is, and I hope it will go farther in addressing global warming. Thank you very much for your time.

—Krys Call, Santa Cruz, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs Alexandra Hopkins, La Crescenta, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Ana Garcia, Pacifica, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. Use rooftops for solar! The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. Theresa Bucher, Tarzana, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Jack Wittmier, FOLSOM, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Sherrill Futrell, Davis, CA

Dear California Energy Commission: As a native Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. This is vital to allow California to grow without the destruction caused by reliance on gas. How many massive fires does it take to get our attention? We can transition to healthier buildings in every town and city, but we must do it now. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Sharon Petersen, Huntington Beach, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Brian Jeffery, Temecula, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Susan Sloan, Los Angeles, CA

Dear California Energy Commission: I'm a California native and I support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering buildings with fossil fuels affects our health and is adding to the climate crisis. California must have a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. Thank you.

—Mr. Tom Hazelleaf, Seal Beach, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Marilyn Shepherd, Trinidad, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Julie K. Sanford, Van Nuys, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. B Sandow, Richmond, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Len Carella, San Francisco, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms Patricia Bradford, Bolinas, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Beverly Harris, Beverly Hills, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Kimberly Hughes, Mill Valley, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr Michael Shenkin, Dana Point, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Wayne Steffes, Redding, CA 96001, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Lynne Jeffries, Laguna Niguel, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Val Laurent, San Francisco, CA

Dear California Energy Commission: We strongly support your draft buildings energy code because it is essential that we encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. However, we urge you to revise the draft code to require all-electric construction in the very near future. More needs to be done to accelerate our state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and exacerbates the climate crisis. Gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution, than all power plants in the state combined. We are counting on you require all-electric construction in this plan. This is very important to us. Thank you.

—Mr. Greg and Laurie Schwaller, Three Rivers, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Diana Kliche, Long Beach, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Debra Little, Nevada City, CA

Dear California Energy Commission: As a Californian, I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering homes and buildings with fossil fuels impacts our health and contributes to the climate crisis. Gas-fired appliances and burning gas for heat and hot water causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. Thank you so much for your time and all you can do to move this essential transition forward.

—Mr. Terrence McNally, Long Beach, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Greg Rosas, Castro Valley, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Lee Wasserwald, Santa Monica, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Thane Christopher, Burbank, CA

Dear California Energy Commission: As a Californian, I'm already experiencing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Mindy Jonas, Novato, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. El Pe, Talmage, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. Last fall and again already this spring I have been alarmed by repeated wildfire alerts and evacuation orders for the area of northwest Berkeley where I live. Even worse, the particulate pollution from wildfire smoke has twice sent my immune system into overdrive, triggering painful reactions which take weeks to overcome. I can't be sure that those effects will abate the next time round. Under the best of circumstances I should have already moved to Vermont. I can no longer tolerate the climate in California. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Dr. Regina Stefaniak, Berkeley, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Nareg Keshishian, Woodland, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mr. Rob P. Lawrence, San Francisco, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—ms joyce kolasa, CA - Springville, CA

Dear California Energy Commission: I am the mother of a two year old child, and I am terrified for her future if we do not take immediate and drastic action to protect the environment. No amount of profit is worth extinction. As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. Powering our homes and buildings with dirty fossil fuels impacts our health and is contributing to the climate crisis. And gas-fired appliances and burning gas for heat and hot water in homes and buildings causes more climate pollution, and 7 times more dangerous nitrogen oxide air pollution than all power plants in the state combined. To address the climate crisis, transition to an 100% clean energy economy, and protect public health, California must move towards a future where all new buildings are powered by clean electricity instead of fossil gas for heat and hot water. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Mrs. Leslie Rader, Sunland, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible. The action you take today will help ensure that California can have the healthy clean energy future we need and deserve. Thank you so much for your time.

—Ms. Nancy McCormick, Fresno, CA

Dear California Energy Commission: We've done our part, gotten solar panels and battery, switched to wind energy for when we have to purchase it, planned to get an electric water heater - but individual solutions to climate change can't really do very much. Public policy is needed. It's hard and expensive to remodel buildings that were designed to use fossil fuels. It's better if all new construction uses clean energy from the get-go. That's your job.

—Ms. Nina G. Wouk, Menlo Park, CA

Dear California Energy Commission: As a Californian, I'm already seeing the impacts of climate change firsthand — so I'm writing to support your draft buildings energy code. The draft buildings energy code would encourage healthier, more climate friendly buildings, improve indoor air quality, boost energy efficiency, reduce the need for dangerous gas infrastructure, save residents money on utility bills, and create new clean energy jobs. While this plan is a step in the right direction, it stops short of requiring all-electric construction. More needs to be done to accelerate the state's transition to 100% clean electricity for all new buildings as soon as possible.
