Green energy

my proposal to produce green energy,

1) If we will be successful in convince the people that if every house owner put full roof of solarpanels it will produce 500% more Green Energy. Now hardly 10% houses are having Solar roof that to they produce electricity for their own requirement.

2) If we make plan to have biogas plants in each town ,villages, and Cities .It will produce lot of green energy as well as organic manure

3) we must try about wind turbines along free ways in California it will also produce green energy .

if we will do all above procedure then California will be in position to export green energy.
