CalPine Power Plant

The May 27 explosion at the CalPine Hayward Plant demonstrates how unsafe this power plant is in such a densely populated area. This plant should NEVER have been approved and was opened with total disregard to the wishes of the majority of residents of Hayward because of "alleged financial benefits" which never materialized and should NEVER have been a consideration in the first place! The plant is a pollution generating nightmare which generates more carbon than 500,000 cars in a single year! This plant should NEVER be allowed to reopen. Plants like these are always shoved down the throat of minority communities which don't have the expertise or resources to oppose them. We also just had a 4.0 earthquake 6-28-21 which is another imminent threat to residents with the additional dangers of this unstable power plant.
