Failure Analysis and Risk Assessment

Prior to CEC approval, I request that a Root Cause Analysis, Failure Analysis, and Risk Assessment for the Plant be completed, reviewed, and publicly disclosed for comments. A fire and explosion of this magnitude is very serious and may indicate systemic issues in the operation, design, and/or maintenance of the Plant. Additionally, it is crucial to understand why the fire/explosion prevention and safety protection systems designed to prevent catastrophic failures failed. Corrections will need to be implemented before the Plant is approved to restart operations, in my opinion.
