Calpine Application to Restart Hayward's Russel City Power Plant

Calpine Application to Restart Russel City Energy Center should be denied until the company can adequately provide the reasons for the explosion and fire caused by the catastrophic failure associated with its cooling and heat and carbon containment systems, outline steps to prevent similar future events, and implement and have the CED verify their implementation. It should also be required to provide evidence that the remaining plant functions can provide safe, clean energy without further environmental, safety or health impacts to the residents of Hayward.
