## **The Russell City Energy Plant**

I heard the explosion that happened at the power plant back in May and living so close to this facility I was scared. Remembering the meltdown at the Japanese power plant I began to worry that something like that could happen in my own backyard. I hate the power plant and never wanted it to be built in the first place. None of my neighbors wanted this thing here and even though we all spoke up and opposed it, they went ahead and built it not giving a care to how it would truly affect the residents and most of all the children. We live just 2 miles from it and I found out that parts of a steam turbine just flew off and landed miles away possibly hurting people! Who is to say that another explosion won't happen and even more debris goes flying into the unknown and reaches my backyard where my grandchildren play! Or the house for that matter! This company doesn't give a crap about these things until someone's life has ended due to their quest for profits! We don't need a power plant...we need more clean energy sources like solar panels! And now they want to restart this stupid plant using some sort of natural gas...another component that can and does explode! Sounds to me like they are not truly equipped with the right staff to make sure these things don't happen. Sounds to me like CAL OSHA hasn't been called to find out why metal was allowed to just fly thru the air and fall into the homeless shelter our city just created in that area. Sounds to me like, once again, this for profit company only wants to go back to making millions of dollars for their shareholders and has ABSOLUTELY no regard for the safety and welfare of the children of MY city! I don't want them here, I don't want them starting back up and I want YOU to make sure that they have ALL the right safety features in place before allowing them to touch one single button to start this grotesque excuse of energy building on! WE NEED RENEWABLE ENERGY NOT MORE WASTE! Stop polluting our planet!!
