No restart

Hello, I live in Hayward and I am concerned about the proposed restart of the Calpine Russell City Energy Center. There was much discussion about public safety and air quality during the time that this power plant was being proposed. There was much public discussion and community opposition to this project. I strongly urge the Commission to require that Calpine do a thorough investigation of the cause of this major fire that occurred at the power plant in May. They must be required to prove that they have made the necessary corrections to prevent another mishap that endangers public health prior to restart. Also, I did not hear a word about the fire until I saw a posting by a neighbor on the NextDoor app! If they are keeping this news from the public, what else are they hiding? Aren't they required to notify the public? Thank you.
