## **EV Charging for MUD Residents**

It is very important to include the community in all funding decisions about EV charging stations. We need to reduce racial and other inequalities currently built in to the system. We need easily accessible EV charging possibilities for as many people as possible., And we need to fund the most charging spaces possible for every dollar of funding. It will be important to perform effective outreach to the public, particularly to lower-income families, who can benefit most from reducing carbon emissions. Since charging infrastructures needs to be low-cost, it would make sense to remove DC fast charging as an option for multi-family charging, as luxury EV auto producers are creating those for themselves.
