Make grants to establish EV charging stations

Electric vehicle charging infrastructure should be put in place along all of California's highways in order to ease the way for residents to live with electric cars and trucks. If a gasoline tax is needed to fund these, this would be good, making a level playing field for the marketing of electric vehicles versus marketing fossil-fuel vehicles. California and the world should transition to all electric transportation as rapidly as we can to avoid further loading of earth's atmosphere with carbon, which is retaining heat and has created our climate emergency, tormenting us with forest fires, heat waves, drought, and in time, worse, with inundation of seacoast cities, tropical diseases moving north, and making the ecosystem fragile due to loss of species of living things. Only you, public officials, have the power to save our planet. Use your power to do the right things.
