Elk Hills 550 MW Power Plants CO2 Emissions

Good day California Energy Commission

Are there options on the table for dealing with the Elk Hills 550 MW CO2 emissions. I was reading about the plans of applying CCUS as was done for the Petra Nova power plant near Houston Texas. The installation and the operating costs caused that project to be shut down. This group is expecting \$200 per ton of captured CO2 from the State of California plus the Federal 45Q tax benefit to make this project feasible?

We would like the opportunity to meet with you to discuss options. There is more in the combusted exhaust than just CO2 that can be captured and utilized, and we would like the opportunity to share that with you.

I look forward to your reply
Have A Fantastic Day!
