Need an OpenAPI3 Compatible API

It seems the MIDAS API schema is defined using XML. While there are XML APIs still around, it is slowly being supplanted by the new OpenAPI 3.0 standard (check this link: https://github.com/OAI/OpenAPI-Specification). OAI defines its schema in JSON and allows callbacks. I would encourage the Commission technical staff to think about revising the MIDAS API to conform with the OpenAPI 3.0 standard, before it begins to see a lot of deployment and it becomes more difficult to resolve the technical debt.

Thank you.
