

DOCKETED

Docket Number:	21-ESR-01
Project Title:	Energy System Reliability
TN #:	239803
Document Title:	Presentation - Revised 2022 Summer Stack Analysis for September 8 Business Meeting
Description:	N/A
Filer:	Courtney Wagner
Organization:	California Energy Commission
Submitter Role:	Commission Staff
Submission Date:	9/20/2021 4:47:32 PM
Docketed Date:	9/20/2021

Item 8: Revised 2022 Summer Stack Analysis

September 8, 2021 Business Meeting

Angela Tanghetti and Lana Wong
Energy Assessments Division

Benefits to California

Stack analysis provides situational awareness in the event of west-wide extreme weather and prolonged drought to help ensure electric system reliability

Midterm Reliability Analysis vs Stack Analysis

LOLE Analysis

Purpose: Inform procurement need

Uses distributions of conditions

- Demand profiles
- Wind and solar profiles
- Randomized outages

Challenge:

- Dependent on historic weather patterns which may not fully reflect climate change

Stack Analysis

Purpose: Inform need for contingencies

Provides potential of average and extreme:

- High demand days like summer 2020
- Drought impacts on hydro
- Capped imports

Challenge:

- Assumptions designed to capture extreme weather events

Stakeholder Comments

Why develop 2022 stack analysis and LOLE probability analysis?

- Provides situational awareness in the event of west-wide extreme weather and prolonged drought
- Provides a point of reference for consideration in other energy related proceedings
- Provides insight as to the amount and duration of need for contingency resource options

Stakeholder Comments

Assumptions are overly conservative

Hydro derate too high

- Considers specific drought year conditions

7.5% forced outages may be high

- Extreme weather, fire and smoke can adversely impact supply

No economic imports is too conservative

- Assumes west-wide extreme weather event

Requests for more specific data and assumptions

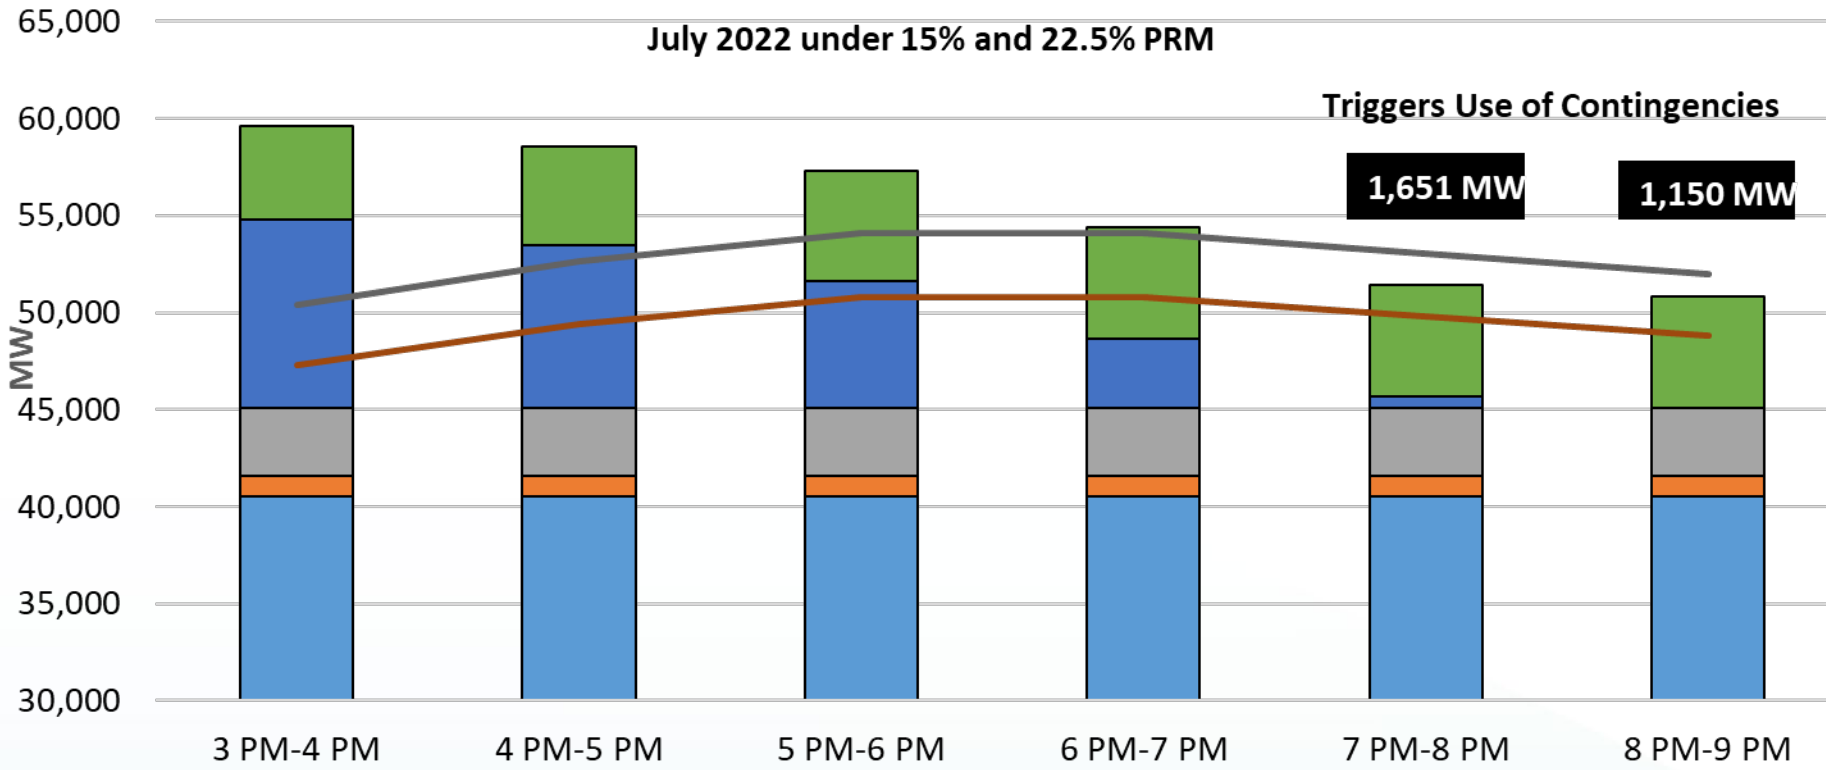

Summer 2022 Stack Analysis Updates

- Incorporates additional CPUC Procurement and Retirements
 - + 878 MW (up from 556 MW) CPUC emergency procurement July 2022
 - + 1,270 MW (up from 840 MW) CPUC ordered procurement August 2022
 - + 363 MW (up from 0 MW) CPUC ordered procurement September 2022
 - 834 MW (unchanged from draft) Redondo Beach Retirement
- Incorporates additional Demand Response and Imports for Publicly Owned Utilities
 - + 478 MW July 2022
 - + 398 MW August 2022
 - + 385 MW September 2022

July 2022

Revised Stack Analysis compared to Draft

- Eliminated contingencies in the 6PM-7PM hour for the 22.5% PRM
- Reduced contingencies in all other hours by ~885 MW

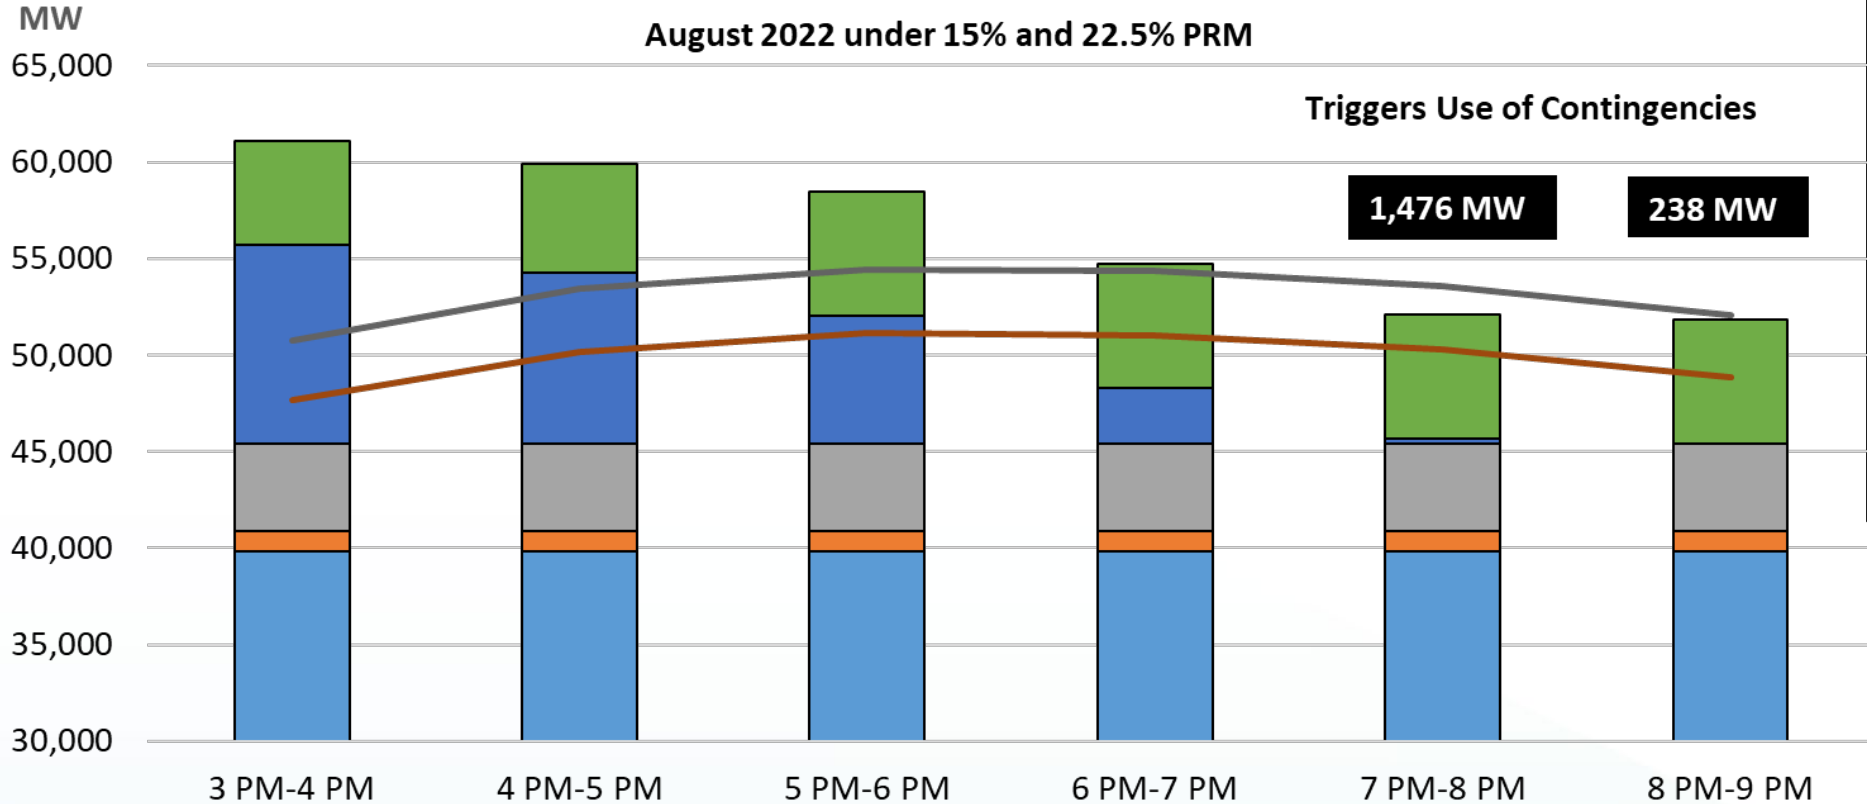

- Hour PDT**
- Avg. Imports, RA Contracts
 - Solar (Plexos Shapes)
 - New Resources & CPUC Expedited Procurement (exc. Solar)
 - Existing DR
 - Drought Adj Existing Resources (exc. Solar, DR)
 - Drought Adj 1-in-2 peak demand + 15% PRM
 - Drought Adj. 1-in-2 peak demand + 22.5% PRM

Source: Hourly Stack Analysis Tool, California Energy Commission staff
Lana Wong

August 2022

August 2022 under 15% and 22.5% PRM

- Avg. Imports, RA Contracts
- Solar (Plexos Shapes)
- New Resources & CPUC Expedited Procurement (exc. Solar)
- Existing DR
- Drought Adj Existing Resources (exc. Solar, DR)
- Drought Adj. 1-in-2 peak demand + 15% PRM
- Drought Adj. 1-in-2 peak demand + 22.5% PRM

Revised Stack Analysis compared to Draft

- Eliminated contingencies in the 6PM-7PM hour for the 22.5% PRM
- Reduced contingencies in all other hours by ~1,004 MW

Source: Hourly Stack Analysis Tool, California Energy Commission staff
Lana Wong

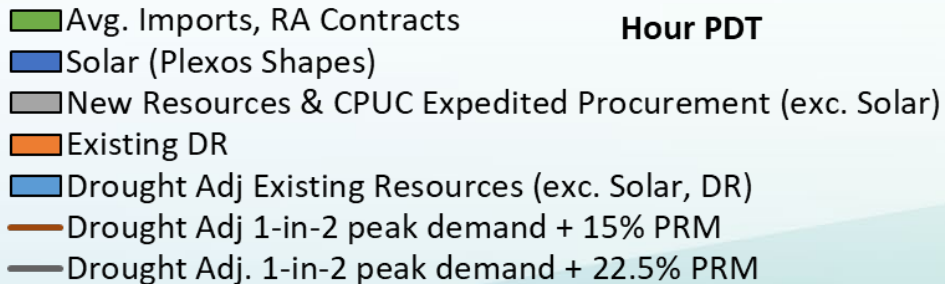

September 2022

Revised Stack Analysis compared to Draft

- Eliminated contingencies in the 8PM-9PM hour for the 15% PRM
- Reduced contingencies in all other hours by ~924 MW

Source: Hourly Stack Analysis Tool, California Energy Commission staff
Lana Wong

Recommendation

Adoption of Resolution 21-0908-8 for the 2022 Summer Stack Analysis
