## **Development Commission (Energy Commission) Contact for H2 Infrastructure Funding**

Dear Sir, In Senate Bill No. 643, it talks about the Development Commission (Energy Commission) not being limited to provide funds for H2 fueling station infrastructure and to report out ZEV initiatives. My question is how does a specialist in H2 fueling station infrastructure with over 46 station projects globally keep in touch with the progress, funding (if/when it is available), and news around this critical piece to the ZEV initiative? Is the Development Commission (Energy Commission) the best contact? If so, how do we get on their mailing list? Is there a contact there industry can call? If they are not the best contact, who would be the best source for your H2 infrastructure updates under Senate Bill No. 643? Thanks...

Marty Chiaramonte
