Scoping Comments of the Pacific Energy Policy Center on 2022 Integrated Energy Policy Report Update EIR

We urge the CEC to include detailed update information on all California Energy Efficiency (EE) Program efforts in the 2022 IEPR Update. That would include statewide and regional data on all CEC EE programs, all private and public energy utility EE program efforts, and all other EE programs funded using federal, state and local funds throughout the state. At a minimum, data for each EE program details should include annual dollar budgets and actual expenditures, measured electric and natural gas savings goals and actual measured energy saving achieved, and all program proposals and plans to increase measured energy savings produced by each program. Context data should include program year goals and achievements for the period 2010 2015 where available.
