Comments of Tri Agency on draft commission report on Offshore Wind Energy Development off of California'

We would just like to add our advocacy to setting the planning goals to achieve 5GW by 2030 and a minimum of 20GW of offshore wind supplied power by 2045. We believe in order for the investment community, developers, and suppliers need to have firm numbers that will be achieved in order to properly plan. Additionally as scale is important for cost considerations we believe the additional power generation suggested above will help achieve reduced costs to the ultimate consumers.
